

JN0-105 Actual Exams | Trustworthy JN0-105 Practice

DOWNLOAD the newest PremiumVCEDump JN0-105 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1QLjuK8ZD5OUKYoj1t9ItqbPkjZ4WkQ1>

To keep with the fast-pace social life, we provide the fastest delivery services on our JN0-105 exam questions. As most of the people tend to use express delivery to save time, our JN0-105 preparation exam will be sent out within 5-10 minutes after purchasing. As long as you pay at our platform, we will deliver the relevant JN0-105 Exam Materials to your mailbox within the given time. Our company attaches great importance to overall services, if there is any problem about the delivery of JN0-105 exam materials, please let us know, a message or an email will be available.

In order to meet different needs of the candidates, three versions for JN0-105 exam materials are available. You can choose the one you prefer for your training. JN0-105 PDF version is printable, and you can print them into hard one if you like. JN0-105 Soft test engine can install in more than 200 personal computers, it also support MS operating system. JN0-105 Online Test engine can be convenient and easy to learn, it supports all web browsers, and you can have a general review of what you have learned through this version.

Trustworthy JN0-105 Practice & Valid JN0-105 Test Review

To save you from loss of money and time, PremiumVCEDump is offering a product that is specially designed to help you pass the Junos, Associate (JNCIA-Junos) (JN0-105) exam on the first try. The Juniper JN0-105 Exam Dumps is easy to use and very easy to understand, ensuring that it is student-oriented. You can choose from 3 different formats available according to your needs. The 3 formats are desktop JN0-105 Practice Test software, web-based Junos, Associate (JNCIA-Junos) (JN0-105) practice exam, and JN0-105 dumps PDF format.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 2	<ul style="list-style-type: none">• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 3	<ul style="list-style-type: none">• Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.
Topic 4	<ul style="list-style-type: none">• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 5	<ul style="list-style-type: none">• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q84-Q89):

NEW QUESTION # 84

Which service does RADIUS provide?

- A. routing
- B. DNS resolution
- **C. authentication**
- D. time synchronization

Answer: C

Explanation:

RADIUS, which stands for Remote Authentication Dial-In User Service, provides authentication services for users trying to access a network. It is a networking protocol that provides centralized Authentication, Authorization, and Accounting (AAA) management for

users who connect and use a network service.

NEW QUESTION # 85

Which two statements are true about the Junos OS? (Choose two.)

- A. Exception traffic is never sent to the control plane.
- B. Routing tables are stored in the forwarding plane.
- C. Routing tables are stored in the control plane.
- D. Exception traffic is sent to the control plane.

Answer: C,D

Explanation:

In Junos OS, as with many network operating systems, the control plane is responsible for processes that determine how to route traffic. This includes maintaining routing tables, which store information about network paths and protocols. Therefore, routing tables are indeed stored in the control plane.

Exception traffic refers to packets that cannot be processed by the normal fast-path processing of the Packet Forwarding Engine (PFE) in the forwarding plane, and thus are sent to the control plane for further processing. This might include packets destined for the router itself, packets that need to be fragmented, or packets that match certain firewall filter criteria, among other reasons. Routing tables are not stored in the forwarding plane. However, the forwarding plane contains the forwarding table (sometimes referred to as the forwarding information base or FIB), which is a distilled version of the routing table optimized for fast packet forwarding. The forwarding plane uses this information to perform the actual transfer of packets across the network device interfaces.

NEW QUESTION # 86

Exhibit

```
{hold:node0}[edit]
```

```
root# set system root-authentication ?
```

Possible completions:

```
+ apply-groups Groups from which to inherit configuration data
+ apply-groups-except Don't inherit configuration data from these groups
encrypted-password Encrypted password string
load-key-file File (URL) containing one or more ssh keys
plain-text-password Prompt for plain text password (autoencrypted)
> ssh-dsa Secure shell (ssh) DSA public key string
> ssh-rsa Secure shell (ssh) RSA public key string
```

```
{hold:node0}[edit]
```

```
root# set system root-authentication plain-text-password
```

New password:

Retype new password:

```
{hold:node0}[edit]
```

```
root# commit and-quit
```

```
[edit interfaces]
```

```
'ge-0/0/0'
```

HA management port cannot be configured

error: configuration check-out failed

```
{hold:node0}[edit]
```

```
root#
```

You are unable to remotely access your Juniper device using the CLI.

Referring to the exhibit, which command would you add to the existing configuration to enable remote CLI access?

- A. load factory-default
- B. set system services ssh
- C. set system root-authentication plain-text-password
- D. set system login idle-timeout 20

Answer: B

Explanation:

In Junos OS, remote access to the device's CLI is commonly facilitated through Secure Shell (SSH), a protocol providing secure command-line access over an insecure network. The given exhibit indicates an attempt to set a root authentication password but does not show configuration for enabling remote access services. To enable SSH, which is not shown in the configuration snippet, you need to configure the device to accept SSH connections. This is done by enabling the SSH service within the system services hierarchy of the configuration. The correct command to add to the existing configuration for enabling remote CLI access via SSH is set system services ssh. This command activates the SSH service, allowing secure remote logins to the device.

NEW QUESTION # 87

What will the request system configuration rescue save command do?

- A. It saves a configuration version prior to the configuration most recently committed as the rescue configuration.
- B. It activates the rescue configuration.
- **C. It saves the most recently committed configuration as the rescue configuration.**
- D. It saves the candidate configuration as the rescue configuration.

Answer: C

Explanation:

The request system configuration rescue save command in Junos OS saves the most recently committed configuration as the rescue configuration. This rescue configuration can be used to recover the device if future configurations cause issues. It ensures there is a stable, known-good configuration to fall back on, which is crucial in network management and troubleshooting.

Reference:

"rescue : save configurations as the rescue: request system configuration save(saves the current configs as a rescue configs)" from Useful Juniper Commands.txt.

Juniper official documentation: Configuring and Activating a Rescue Configuration.

NEW QUESTION # 88

You are logged in to a Junos OS device with SSH and issued the show protocols | compare command in the configuration, but no output is shown.

Which statement is correct in this scenario?

- A. Someone accidentally deleted the active configuration.
- B. You must commit the configuration before any output will be shown.
- **C. There are no changes to the candidate configuration.**
- D. The command only works for interface configuration differences.

Answer: C

Explanation:

The show | compare command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.

NEW QUESTION # 89

.....

If you feel that you always suffer from procrastination and cannot make full use of your spare time, maybe our JN0-105 study materials can help you solve your problem. We are willing to recommend you to try the JN0-105 learning guide from our company. Our products are high quality and efficiency test tools for all people with three versions which satisfy all your needs. If you buy our JN0-105 Preparation questions, you can use our JN0-105 practice engine for study in anytime and anywhere.
