

3V0-21.25 Top Questions | 3V0-21.25 Well Prep

All these three 3V0-21.25 exam questions formats are easy to use and compatible with all devices, operating systems, and web browsers. Just choose the best 3V0-21.25 exam questions format and start VMware 3V0-21.25 exam preparation without wasting further time. As far as the price of Advanced VMware Cloud Foundation 9.0 Automation exam practice test questions is concerned, these exam practice test questions are being offered at a discounted price. Get benefits from 3V0-21.25 Exam Questions at discounted prices and download them quickly. Best of luck in 3V0-21.25 exam and career!!!

The world today is in an era dominated by knowledge. Knowledge is the most precious asset of a person. If you feel exam is a headache, don't worry. 3V0-21.25 test answers can help you change this. 3V0-21.25 study material is in the form of questions and answers like the real exam that help you to master knowledge in the process of practicing and help you to get rid of those drowsy descriptions in the textbook. 3V0-21.25 Test Dumps can make you no longer feel a headache for learning, let you find fun and even let you fall in love with learning. The content of 3V0-21.25 study material is comprehensive and targeted so that your learning is no longer blind. 3V0-21.25 test answers help you to spend time and energy on important points of knowledge, allowing you to easily pass the exam.

3V0-21.25 Well Prep - Test 3V0-21.25 Questions Vce

About the materials that relate to VMware 3V0-21.25 exam, many websites can offer the exam materials. But these websites can't guarantee the quality of the exam dumps, meanwhile when you fail the exam, they can't also give you FULL REFUND guarantee. Compared with common reference materials, Actual4Dumps VMware 3V0-21.25 certification training materials is the tool that worth your use. With the help of Actual4Dumps VMware 3V0-21.25 Real Questions and answers, you can absolutely well prepare for the exam and pass the exam with ease. If you want to great development in IT industry, you need to take IT certification exam. If you want to pass your IT certification test successfully, it is necessary for you to use Actual4Dumps exam dumps.

VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q41-Q46):

NEW QUESTION # 41

An administrator has been tasked with creating a region to provide resources to an Organization in VMware Cloud Foundation

(VCF) Automation.

The following information has been provided to the administrator for this task:

- * Two workload domains are configured and will integrate with the region.
- * All workload domains are configured to share a VMware NSX Manager.
- * All workload domains are configured with VMware vSAN storage.
- * All workload domain VMware vCenter instances have a Supervisor enabled.

Before creating the region, what two additional configurations should the administrator validate? (Choose two.)

- **A. All required storage classes are present and have the same names across all vCenter instances.**
- B. All Supervisors are configured with the same services across all vCenter instances.
- **C. All required virtual machine (VM) classes are present and have the same names across all vCenter instances.**
- D. A Region Quota has been created and associated with the Organization.
- E. An AllApps Organization has been created.

Answer: A,C

Explanation:

In VCF 9.0, a Region is a logical grouping of resources (typically spanning multiple vCenter/Supervisor instances) that is presented to an Organization for consumption. For the automation engine to treat multiple clusters or vCenter instances as a single, unified pool of capacity, there must be absolute naming parity for resource types. If a blueprint requests a "Large-Memory" VM Class or a "Gold-Storage" Storage Class, that specific name must exist and be configured identically on every Supervisor instance within the region. If naming differs—for example, "Gold-Tier" on one and "Gold-Storage" on another—the provisioning engine will fail to find a consistent placement target, leading to deployment errors. Validating that VM Classes and Storage Classes are synchronized in name and availability across all participating workload domains is a mandatory "Day 0" task before the logical Region construct can be finalized in the Provider Management Portal.

NEW QUESTION # 42

An Organization Administrator notices that their public assigned IPs are being used for non-production workloads.

What should the administrator do to prevent further public IP addresses consumption?

- A. Create an IP Quota and associate it with the non-production namespace.
- B. Modify the existing VPC and remove the "External IPv4 blocks".
- C. Modify the default IP Quota that was shared by the provider.
- **D. Create an IP Quota and associate it with the non-production VPC.**

Answer: D

Explanation:

In the VCF 9.0 networking model, IP Quotas are the primary governance mechanism for controlling resource consumption within an Organization. When a Provider allocates IP blocks to an Organization, the Organization Administrator is responsible for sub-allocating those resources to individual projects or environments. To prevent non-production workloads from exhausting the pool of public (external) IP addresses, the administrator must Create an IP Quota specifically for the non-production Virtual Private Cloud (VPC). This quota defines the maximum number of public IP addresses that can be used for services such as Load Balancers or NAT rules within that specific VPC. Once the quota is reached, any further requests for public IPs in that VPC will be denied by the VCF Automation engine, ensuring that a sufficient supply remains available for production-critical workloads. Modifying the provider-shared quota (Option C) would affect the entire organization, and removing external blocks (Option D) would break existing connectivity rather than provide proactive governance.

NEW QUESTION # 43

An administrator clicks on Orchestrator to create a workflow in a VMApps organization as shown in the image. Where would the administrator go next to enable Orchestrator?

- **A. Click Integrations.**
- **B. Click Connections.**
- **C. Click Infrastructure.**
- D. Click Design.

Answer: A,B,C

Explanation:

In VCF 9.0 Automation, enabling the Operations Orchestrator (vRO) for a specific organization is an integration task performed within the portal's infrastructure settings. If the administrator sees a message stating "No VCF Operations Orchestrator integration available" under the Orchestrator tab, it indicates that the logical link between the Automation service and the Orchestrator engine has not been established for that tenant. To resolve this, the administrator must navigate through the following path: Infrastructure > Connections > Integrations. Under the Integrations menu, the administrator can select "Add Integration" and choose VCF Operations Orchestrator. They must provide the FQDN of the orchestrator server and the appropriate credentials. Once the integration is finalized and the "Collect Data" task completes, the Orchestrator tab will become functional, allowing the administrator to import, create, and manage workflows directly from the VCF Automation UI.

NEW QUESTION # 44

What are two prerequisites to enable provisioning VMs via kubectl against tenant resources? (Choose two.)

- A. Generate an API token from the VCF Automation UI.
- B. Ask the Provider to generate a token via the system APIs.
- C. Create a new extensibility Action.
- D. Create a context via VCF CLI.
- E. Create a context via kubectl.

Answer: A,D

NEW QUESTION # 45

An administrator has been tasked with configuring tenant branding with the following requirements:

* Organization branding should only appear when a user has logged in to the organization portal.

Select the three steps involved in configuring branding. (Choose three.)

- A. Enable the Enable Login and Logout Page Branding setting.
- B. Disable the Enable Login and Logout Page Branding setting.
- C. Import a branding theme.
- D. Log into the Provider Management Portal.
- E. Navigate to Branding.
- F. Log into the Organization Portal.

Answer: B,E,F

Explanation:

In VMware Cloud Foundation 9.0, branding is managed within the Organization Portal to allow for tenant-specific customization. To meet the specific requirement that branding only appears after a user has authenticated, the administrator must navigate to the Branding section of the portal. The critical configuration step is to Disable the Enable Login and Logout Page Branding setting. By default, if this is enabled, the custom logos and colors are displayed on the public-facing login screen. Disabling it ensures that the generic VCF/Broadcom login page is presented to the public, and the custom tenant identity is only loaded into the browser session once the user's organization context is established through successful login. This is a common requirement for service providers who want to maintain a consistent entry point for all users while providing a personalized "white-labeled" experience once the user is inside their specific environment.

NEW QUESTION # 46

.....

People are very busy nowadays, so they want to make good use of their lunch time for preparing for their 3V0-21.25 exam. If you choose our 3V0-21.25 exam question as your study tool, you will not meet the problem. Because the app of our 3V0-21.25 exam prep supports practice offline in anytime. If you buy our products, you can also continue your study when you are in an offline state. You will not be affected by the unable state of the whole network. You can choose to use our 3V0-21.25 Exam Prep in anytime and anywhere
