

Pass Guaranteed EXIN CDFOM Certified Data Center Facilities Operations Manager First-grade Actual Tests

BTW, DOWNLOAD part of TestKingIT CDFOM dumps from Cloud Storage: https://drive.google.com/open?id=1nkLDAZKYVzx-zyzhK_o0Waa_CovZVsHk

To create the most popular CDFOM exam questions in the market, we have been working hard on compiling the content and designing the displays. And our professional experts have been studying and doing research on the CDFOM study materials for a long time. These experts spent a lot of time before the CDFOM Study Materials officially met with everyone. They spent a lot of time to collate data and carefully studied the characteristics of the stocks to make sure every detail is perfect.

Sharp tools make good work. CDFOM study material is the best weapon to help you pass the exam. After a survey of the users as many as 99% of the customers who purchased CDFOM study material has successfully passed the exam. The pass rate is the test of a material. Such a high pass rate is sufficient to prove that CDFOM Study Material has a high quality. In order to reflect our sincerity on consumers and the trust of more consumers, we provide a 100% pass rate guarantee for all customers who have purchased CDFOM study materials.

>> CDFOM Actual Tests <<

Unparalleled CDFOM Actual Tests Provide Prefect Assistance in CDFOM Preparation

As the constant increasing of difficulty index of the CDFOM training materials, passing rate is very important when you choose the study materials. Our study materials can guarantee you to pass the CDFOM exam for the first time. After all, all of our questions are the same with the real exam questions. It will cost too much time if you still learn by yourself and memorize the boring knowledge of your reference books, you should purchase our CDFOM practice quiz to help you pass the exam soon.

EXIN Certified Data Center Facilities Operations Manager Sample Questions (Q51-Q56):

NEW QUESTION # 51

What is defined by the Recovery Time Objective (RTO)?

- A. The prioritized timeframes for resuming disrupted activities at a specified minimum acceptable capacity
- B. The maximum age of the data to be restored in case of a disaster
- C. The time within which the impacts of not resuming activities would become unacceptable to the organization
- D. The minimum level of service required to be operational again

Answer: A

NEW QUESTION # 52

When creating a compliance document register, which categories should at least be included?

- A. Staffing and training
- B. Marketing and budget
- C. Training and business culture
- **D. Legal and service**

Answer: D

Explanation:

A compliance document register ensures that the organization maintains oversight and traceability of all documents required to meet regulatory, legal, and service-related obligations. The register is essential for audits, governance, risk management, and operational continuity. According to EPI's GRC framework, the minimum categories that must be included are legal and service compliance documents.

Legal documents include regulatory requirements, statutory obligations, contracts, permits, safety regulations, environmental compliance mandates, and jurisdictional requirements. Service documents include SLAs, OLAs, underpinning contracts, service catalogs, and operational procedures required to fulfill service commitments. These categories represent the core compliance landscape affecting the organization's ability to operate legally and deliver services contractually.

Options B, C, and D list other organizational elements that may appear in broader documentation sets but are not fundamental compliance categories. Marketing, budgeting, staffing policies, and business culture documents do not constitute mandatory compliance obligations and are not required for inclusion in a compliance register.

Thus, the correct answer is A - Legal and service.

NEW QUESTION # 53

What is defined by the Recovery Time Objective (RTO)?

- **A. The prioritized timeframes for resuming disrupted activities at a specified minimum acceptable capacity**
- B. The maximum age of the data to be restored in case of a disaster
- C. The time within which the impacts of not resuming activities would become unacceptable to the organization
- D. The minimum level of service required to be operational again

Answer: A

Explanation:

In organizational resilience and business continuity planning, the Recovery Time Objective (RTO) is a core metric used to determine the acceptable downtime for each business function.

EPI defines RTO as the:

"Targeted duration within which disrupted services or processes must be restored to a minimum acceptable operational level after a disaster." Key points:

* Timeframe for Recovery The RTO identifies how quickly a facility, system, or service must be restored before the outage causes unacceptable consequences.

* Minimum Service Capacity The RTO refers to restoring operations at a minimum acceptable level, not full normal operations.

* Business Impact Analysis (BIA) Output RTO is derived during BIA where criticality and dependencies of business processes are assessed and prioritized.

* Prioritization of Resources RTO informs disaster recovery planning, resource allocation, and restoration sequencing.

Therefore, the correct definition matches:

D - "The prioritized timeframes for resuming disrupted activities at a specified minimum acceptable capacity." Why the other options are incorrect:

* A describes the MTPD (Maximum Tolerable Period of Disruption).

* B describes elements of the Minimum Business Continuity Objective (MBCO).

* C describes the Recovery Point Objective (RPO).

EPI DCFOM-Aligned Reference Concepts (Paraphrased, Not Verbatim)

* RTO defines the permitted downtime for a service.

* RTO is linked to minimum acceptable capability after recovery.

* RTO is determined through BIA.

NEW QUESTION # 54

Welding works need to be conducted.

Is a Permit to Work (PTW) required and if so, what type of PTW?

- A. A PTW is required for hot work
- B. A PTW is required for energy work
- C. A PTW is required for cold work
- D. Welding is covered under standard maintenance work, a PTW is not required

Answer: A

Explanation:

EPI's Permit to Work (PTW) system categorizes work activities based on risk levels to ensure safe execution and hazard control within the data center.

Welding operations involve open flame, sparks, high heat, molten metal, and ignition sources, making them a high-risk activity.

In EPI safety doctrine, welding is explicitly classified under "Hot Work." Hot Work includes activities such as:

- * Welding
- * Cutting
- * Grinding
- * Brazing
- * Soldering
- * Flame use or spark-producing tools

Because of the fire ignition potential, a Hot Work Permit is mandatory before welding can begin.

The Hot Work PTW ensures:

- * Fire watch personnel are assigned
- * Fire suppression systems are prepared or temporarily disabled with compensating controls
- * Surrounding area is inspected for combustible material
- * Correct PPE is used
- * Hot-work zoning, barriers, and extinguishers are in place
- * Post-work monitoring is performed

Therefore, Option D (A PTW is required for hot work) is the correct and EPI-aligned answer.

EPI DCFOM-Aligned Reference Concepts (Paraphrased, Not Verbatim)

- * The PTW system ensures hazardous activities are controlled.
- * Welding is classified as Hot Work.
- * Hot Work requires a dedicated PTW with fire-risk mitigation and supervisory approval.

NEW QUESTION # 55

During what project phase do you need to start involving the stakeholders?

- A. Planning the project
- B. Monitoring and control the project
- C. Executing the project
- D. Initiating the project

Answer: D

Explanation:

Stakeholder involvement must begin at the very start of the project lifecycle, during the Initiation Phase, because:

- * Stakeholders influence project scope, objectives, and constraints.
- * Their expectations and requirements must be captured early.
- * Stakeholder identification is a mandatory output of the initiation process.
- * Failing to involve them early leads to misalignment, rework, and scope conflicts.

EPI aligns with general project management principles that state:

"Stakeholder identification and engagement begins at project initiation and continues throughout the entire project." Why other options are incorrect:

- * B: Planning depends on stakeholder input already gathered.
- * C: Too late—execution requires validated stakeholder requirements.
- * D: Monitoring occurs after execution has begun.

Thus, A is correct.

* Their input forms the foundation for scope definition and planning.
