You plan to place an order for our Databricks Associate-Developer-Apache-Spark-3.5 test questions answers; you should have a credit card. Mostly we just support credit card. If you just have debit card, you should apply a credit card or you can ask other friend to help you pay for Associate-Developer-Apache-Spark-3.5 test questions answers. Normally we suggest candidates to pay by PayPal, here it is no need for you to have a PayPal account. When you click PayPal it will transfer to credit card payment. If you choose SWREG payment for Associate-Developer-Apache-Spark-3.5 Test Questions Answers, it will have extra tax for some countries.

Students are worried about whether the Associate-Developer-Apache-Spark-3.5 practice materials they have purchased can help them pass the exam and obtain a certificate. They often encounter situations in which the materials do not match the contents of the exam that make them waste a lot of time and effort. But with Associate-Developer-Apache-Spark-3.5 exam dump, you do not need to worry about similar problems. Because our study material is prepared strictly according to the exam outline by industry experts, whose purpose is to help students pass the exam smoothly. As the authoritative provider of Associate-Developer-Apache-Spark-3.5 Test Guide, we always pursue high passing rates compared with our peers to gain more attention from potential customers. In order to gain the trust of new customers, Associate-Developer-Apache-Spark-3.5 practice materials provide 100% pass rate guarantee for all purchasers. We have full confidence that you can successfully pass the exam as long as you practice

according to the content provided by Associate-Developer-Apache-Spark-3.5 exam dump. Of course, if you fail to pass the exam, we will give you a 100% full refund.

Pass-Sure Associate-Developer-Apache-Spark-3.5 Exam Guide: Databricks Certified Associate Developer for Apache Spark 3.5 - Python are famous for high pass rate - ExamsReviews

Though our Associate-Developer-Apache-Spark-3.5 training guide is proved to have high pass rate, but If you try our Associate-Developer-Apache-Spark-3.5 exam questions but fail in the final exam, we can refund the fees in full only if you provide us with a transcript or other proof that you failed the exam. We believe that our business will last only if we treat our customers with sincerity and considerate service. So, please give the Associate-Developer-Apache-Spark-3.5 Study Materials a chance to help you.

Databricks Certified Associate Developer for Apache Spark 3.5 - Python Sample Questions (Q56-Q61):

NEW QUESTION # 56

47 of 55.

A data engineer has written the following code to join two DataFrames df1 and df2:

```
df1 = spark.read.csv("sales_data.csv")
```

```
df2 = spark.read.csv("product_data.csv")
```

```
df_joined = df1.join(df2, df1.product_id == df2.product_id)
```

The DataFrame df1 contains ~10 GB of sales data, and df2 contains ~8 MB of product data.

Which join strategy will Spark use?

- A. Shuffle join because no broadcast hints were provided.
- **B. Broadcast join, as df2 is smaller than the default broadcast threshold.**
- C. Shuffle join, because AQE is not enabled, and Spark uses a static query plan.
- D. Shuffle join, as the size difference between df1 and df2 is too large for a broadcast join to work efficiently.

Answer: B

Explanation:

Spark automatically uses a broadcast hash join when one side of the join is small enough to fit within the broadcast threshold.

Default threshold:

```
spark.sql.autoBroadcastJoinThreshold = 10MB (as of Spark 3.5)
```

Since df2 is 8 MB, Spark automatically broadcasts it to all executors. This avoids a shuffle on the large dataset (df1) and speeds up the join.

Why the other options are incorrect:

A: 8 MB < 10 MB threshold → broadcast join is efficient.

B: AQE is not required for broadcast joins; it's a static optimization.

C: Broadcast hints are optional - Spark infers automatically.

Reference:

Databricks Exam Guide (June 2025): Section "Troubleshooting and Tuning Apache Spark DataFrame API Applications" - broadcast joins and optimization.

Spark SQL Join Strategies - Broadcast hash join and shuffle join thresholds.

NEW QUESTION # 57

A data engineer is building an Apache Spark™ Structured Streaming application to process a stream of JSON events in real time.

The engineer wants the application to be fault-tolerant and resume processing from the last successfully processed record in case of a failure. To achieve this, the data engineer decides to implement checkpoints.

Which code snippet should the data engineer use?

- A.

```
query = streaming_df.writeStream \
    .format("console") \
    .option("checkpoint", "path/to/checkpoint") \
```

- ```
.outputMode("append") \
.start()
```
- B. `query = streaming_df.writeStream \`  
`.format("console") \`  
`.outputMode("append") \`  
`.start()`
  - C. `query = streaming_df.writeStream \`  
`.format("console") \`  
`.outputMode("complete") \`  
`.start()`
  - D. `query = streaming_df.writeStream \`  
`.format("console") \`  
`.outputMode("append") \`  
`.option("checkpointLocation", "/path/to/checkpoint") \`  
`.start()`

**Answer: D**

Explanation:

To enable fault tolerance and ensure that Spark can resume from the last committed offset after failure, you must configure a checkpoint location using the correct option key: "checkpointLocation".

From the official Spark Structured Streaming guide:

"To make a streaming query fault-tolerant and recoverable, a checkpoint directory must be specified using

`.option("checkpointLocation", "/path/to/dir").` Explanation of options:

Option A uses an invalid option name: "checkpoint" (should be "checkpointLocation") Option B is correct: it sets checkpointLocation properly Option C lacks checkpointing and won't resume after failure Option D also lacks checkpointing configuration

## NEW QUESTION # 58

Given the code fragment:

```
import pyspark.pandas as ps
psdf = ps.DataFrame({'col1': [1, 2], 'col2': [3, 4]})
```

import pyspark.pandas as ps

psdf = ps.DataFrame({'col1': [1, 2], 'col2': [3, 4]})

Which method is used to convert a Pandas API on Spark DataFrame (pyspark.pandas.DataFrame) into a standard PySpark DataFrame (pyspark.sql.DataFrame)?

- A. `psdf.to_pandas()`
- B. `psdf.to_pyspark()`
- C. `psdf.to_dataframe()`
- D. `psdf.to_spark()`

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Pandas API on Spark (pyspark.pandas) allows interoperability with PySpark DataFrames. To convert `apyspark.pandas.DataFrame` to a standard PySpark DataFrame, you use `to_spark()`.

Example:

`df = psdf.to_spark()`

This is the officially supported method as per Databricks Documentation.

Incorrect options:

B, D: Invalid or nonexistent methods.

C: Converts to a local pandas DataFrame, not a PySpark DataFrame.

## NEW QUESTION # 59

A developer initializes a SparkSession:

```
spark = SparkSession.builder \
 .appName("Analytics Application") \
 .getOrCreate()
```

```
spark = SparkSession.builder \
 .appName("Analytics Application") \
 .getOrCreate()
```

Which statement describes the spark SparkSession?

- A. If a SparkSession already exists, this code will return the existing session instead of creating a new one.
- B. A new SparkSession is created every time the getOrCreate() method is invoked.
- C. A SparkSession is unique for each appName, and calling getOrCreate() with the same name will return an existing SparkSession once it has been created.
- D. The getOrCreate() method explicitly destroys any existing SparkSession and creates a new one.

**Answer: A**

Explanation:

According to the PySpark API documentation:

"getOrCreate(): Gets an existing SparkSession or, if there is no existing one, creates a new one based on the options set in this builder." This means Spark maintains a global singleton session within a JVM process. Repeated calls to getOrCreate() return the same session, unless explicitly stopped.

Option A is incorrect: the method does not destroy any session.

Option B incorrectly ties uniqueness to appName, which does not influence session reusability.

Option D is incorrect: it contradicts the fundamental behavior of getOrCreate().

(Source: PySpark SparkSession API Docs)

#### NEW QUESTION # 60

A data scientist has identified that some records in the user profile table contain null values in any of the fields, and such records should be removed from the dataset before processing. The schema includes fields like user\_id, username, date\_of\_birth, created\_ts, etc.

The schema of the user profile table looks like this:

```
user_id STRING,
username STRING,
full_name STRING,
date_of_birth DATE,
primary_email STRING,
created_ts TIMESTAMP,
updated_ts TIMESTAMP,
last_login_ts TIMESTAMP
```

Which block of Spark code can be used to achieve this requirement?

Options:

- A. `filtered_df = users_raw_df.na.drop(thresh=0)`
- B. `filtered_df = users_raw_df.na.drop(how='any')`
- C. `filtered_df = users_raw_df.na.drop(how='all', thresh=None)`
- D. `filtered_df = users_raw_df.na.drop(how='all')`

**Answer: B**

Explanation:

`.na.drop(how='any')` drops any row that has at least one null value.

This is exactly what's needed when the goal is to retain only fully complete records.

Usage: CopyEdit

```
filtered_df = users_raw_df.na.drop(how='any')
```

Explanation of incorrect options:

A: `thresh=0` is invalid - `thresh` must be  $\geq 1$ .

B: `how='all'` drops only rows where all columns are null (too lenient).

D: `spark.na.drop` doesn't support mixing `how` and `thresh` in that way; it's incorrect syntax.

## NEW QUESTION # 61

.....

With our Databricks Associate-Developer-Apache-Spark-3.5 exam questions material, we promise your success in Databricks certification. We guarantee that if you study completely from our practice Databricks Associate-Developer-Apache-Spark-3.5 exams, you will pass your Databricks Associate-Developer-Apache-Spark-3.5 exam with flying colors on the first try. If you are pressed for time when studying for the Databricks Certified Associate Developer for Apache Spark 3.5 - Python PDF Questions and working several jobs, PDF format is the ideal option. Because the ExamsReviews follows every bit of the official Databricks Certified Associate Developer for Apache Spark 3.5 - Python exam syllabus to compile the most relevant Databricks Exam Questions and answers with a 100% chance of appearing in the actual Databricks Certified Associate Developer for Apache Spark 3.5 - Python exam. The Databricks Associate-Developer-Apache-Spark-3.5 PDF file does not require any installation and is equally suitable for PCs, mobile devices, and tablets. Using a smartphone, you may go through the Databricks Associate-Developer-Apache-Spark-3.5 exam questions whenever and wherever you desire. The Associate-Developer-Apache-Spark-3.5 PDF files are also printable for making handy notes.

**Associate-Developer-Apache-Spark-3.5 Latest Dump:** <https://www.examsreviews.com/Associate-Developer-Apache-Spark-3.5-pass4sure-exam-review.html>

Our Associate-Developer-Apache-Spark-3.5 practice test is high quality product revised by hundreds of experts according to the changes in the syllabus and the latest developments in theory and practice, it is focused and well-targeted, so that each student can complete the learning of important content in the shortest time. The latest Databricks Associate-Developer-Apache-Spark-3.5 exam dumps are the right option for you to prepare for the Associate-Developer-Apache-Spark-3.5 certification test at home. Just like the old saying goes "something attempted, something done." Our Associate-Developer-Apache-Spark-3.5 exam study material has been well received by all of our customers in many different countries, which is definitely worth trying.

Camcorder Resolution and Picture Quality, Theme is not actually a setting. Our Associate-Developer-Apache-Spark-3.5 practice test is high quality product revised by hundreds of experts according to the changes in the syllabus and the latest developments in theory and practice. Associate-Developer-Apache-Spark-3.5 it is focused and well-targeted, so that each student can complete the learning of important content in the shortest time.

## Choose The Pdf Associate-Developer-Apache-Spark-3.5 Dumps, Pass The Databricks Certified Associate Developer for Apache Spark 3.5 - Python

The latest Databricks Associate-Developer-Apache-Spark-3.5 exam dumps are the right option for you to prepare for the Associate-Developer-Apache-Spark-3.5 certification test at home. Just like the old saying goes "something attempted, something done." Our Associate-Developer-Apache-Spark-3.5 exam study material has been well received by all of our customers in many different countries, which is definitely worth trying.

\*Associate-Developer-Apache-Spark-3.5 Valid & Complete Questions and Answers, Our experienced and professional experts prepare right preparation material for Associate-Developer-Apache-Spark-3.5 Databricks Certified Associate Developer for Apache Spark 3.5 - Python exam.
