

# Ping Identity PT-AM-CPE Official Cert Guide | PT-AM-CPE Exam Forum

It is understandable that different people have different preference in terms of PT-AM-CPE study guide. Taking this into consideration, we have prepared three kinds of versions of our PT-AM-CPE preparation questions: PDF, online engine and software versions. The PDF version of PT-AM-CPE training materials is convenient for you to print, the software version can simulate the real exam and the online version can be used on all electronic devices. If you are hesitating about which version should you choose, you can download our PT-AM-CPE free demo first to get a firsthand experience before you make any decision.

If you are going to attend the PT-AM-CPE exam, and want to get the certificate of the PT-AM-CPE exam, then consider the product of our company, since the pass rate of our company are above 98%, and if you attend the exam and failed it within 60 days after the purchasing, money back guarantee. Just think that you just need to spend some money for the PT-AM-CPE Exam, you will get the certificate of the business, and you not just have a more certificate than others, it's not only a skill, but also a chance. With the certificate for the PT-AM-CPE exam, you are approved by the professionals and you are also a professional in this industry.

## High-quality PT-AM-CPE Official Cert Guide - 100% Pass-Rate Source of PT-AM-CPE Exam

With more than thousands of satisfied applicants in multiple countries, we guarantee that you will clear the Ping Identity PT-AM-CPE exam as quickly as possible by using our product. In this way, Exams.Solutions save you time and money. In addition to all these excellent offers, in any case despite properly studying with PT-AM-CPE Practice Test material.

## Ping Identity Certified Professional - PingAM Exam Sample Questions (Q59-Q64):

### NEW QUESTION # 59

When a user undergoes a session upgrade, what is the outcome?

- A. A new session is created, and the original session is deleted
- **B. The session properties are copied to a new session, and a new session token is handed to the client**
- C. A new session is created, and the original session properties are not copied
- D. The session is updated with new properties, but the session token remains the same

**Answer: B**

Explanation:

Session Upgrade in PingAM 8.0.2 is the mechanism by which a user's current authenticated session is "elevated" to a higher authentication level (Auth Level). This is commonly triggered by Step-up Authentication requirements, where a user attempts to access a highly sensitive resource that requires a stronger authentication method (such as MFA) than what was used for their initial

login.

According to the PingAM documentation on "Session Upgrade Outcomes," the process is not merely a modification of the existing session. Instead, when a user successfully completes the additional authentication requirements (the "Advice"):

Creation of a New Session: PingAM generates a brand-new authenticated session. This new session is assigned a higher authentication level corresponding to the tree or module just completed.

Property Copying: To ensure a seamless user experience, PingAM copies the session properties (attributes, constants, and other metadata) from the original lower-level session into the new higher-level session. This ensures that information gathered during the initial login remains available to applications.

Token Replacement: Because the session ID is part of the session token (SSO Token), a new session implies a new token. PingAM hands the client a new session token to replace the original one. The client (browser or application) must then use this new token for subsequent requests.

If the realm is configured for server-side sessions, the new session is stored in the Core Token Service (CTS). If configured for client-side sessions, a new signed/encrypted JWT is sent to the client as a cookie. The key distinction is that the token changes, and properties are preserved through copying, which distinguishes Option B as the correct technical description of the internal AM lifecycle.

### NEW QUESTION # 60

Which organization sets, maintains, and governs the SAML2 standard?

- A. ISC2
- **B. OASIS**
- C. WC3
- D. IETF

**Answer: B**

Explanation:

PingAM 8.0.2 is strictly compliant with various identity standards to ensure interoperability between different vendors and platforms. The Security Assertion Markup Language (SAML) V2.0 is the cornerstone of modern XML-based federation.<sup>7</sup> According to the PingAM "SAML 2.0 Introduction" and "Supported Standards" documentation, the SAML 2.0 standard is developed and maintained by OASIS (the Organization for the Advancement of Structured Information Standards).<sup>8</sup> Specifically, the OASIS Security Services Technical Committee (SSTC) is responsible for the specifications that define the SAML core (assertions and protocols), bindings (how SAML messages are mapped onto transport protocols like HTTP), and profiles (how SAML is used to solve specific use cases like Web Browser SSO).

Knowing the governing body is important for administrators when reviewing the "Technical Metadata" and "Schema" sections of PingAM, as AM's implementation follows the OASIS SAML 2.0 standards for XML signing, encryption, and assertion structure. Other organizations listed, such as the IETF (Internet Engineering Task Force), govern protocols like OAuth2 and OpenID Connect, while the W3C (World Wide Web Consortium) handles general web standards like XML and WebAuthn. However, for SAML2, OASIS remains the authoritative governing body.

### NEW QUESTION # 61

Which audit event handler is used by PingAM by default, when audit logging is enabled?

- A. CSV audit event handler
- **B. JSON audit event handler**
- C. Syslog audit event handler
- D. Elasticsearch audit event handler

**Answer: B**

Explanation:

Audit logging is a vital security feature in PingAM 8.0.2 that provides a record of system activity. To make these logs useful for modern analysis tools and to ensure they contain rich metadata, PingAM utilizes structured logging.

According to the PingAM "Audit Logging Service" documentation:

When an administrator enables audit logging in a new installation, the system is pre-configured with the JSON audit event handler as the default. This handler writes log entries to the local filesystem in a structured JSON format (e.g., access.audit.json).

The choice of JSON (Option D) as the default is strategic:

Structure: JSON allows for complex, nested data structures, which is necessary to capture the full context of an authentication journey or a policy decision.

Interoperability: JSON is the "native language" of modern log aggregators and SIEM platforms like Splunk, ELK (Elasticsearch/Logstash/Kibana), and Sumo Logic.

Readability: While structured, it remains human-readable for quick manual inspection.

Why other options are incorrect:

CSV (B) and Syslog (C) are available handlers but must be explicitly added or configured; they are not the primary default.

Elasticsearch (A) is a powerful target for audit logs, but PingAM typically sends data there via an external collector reading the

JSON files or via a specifically configured Elasticsearch handler, rather than it being the out-of-the-box default for a local installation.

The JSON handler ensures that from the moment logging is turned on, the data is stored in a format that balances detailed reporting with ease of integration.

### NEW QUESTION # 62

During the PingAM startup process, what is the location and name of the file that the PingAM bootstrap process uses to connect to the configuration Directory Services repository?

- A. <user-home-dir>/openam/config/boot.json
- B. /path/to/tomcat/<tomcat-instance-dir>/webapps/<am-instance-dir>/boot.json
- C. <user-home-dir>/<am-instance-dir>/config/boot.json
- D. <user-home>/<am-instance-dir>/boot.json

**Answer: D**

Explanation:

In PingAM 8.0.2, especially when utilizing File-Based Configuration (FBC), the startup sequence relies on a "bootstrap" phase to locate the system's configuration. According to the "Installation Guide" and "Configuration Directory Structure," the primary file involved in this process is named boot.json.

The boot.json file contains the essential connection details required for the AM binaries to find and unlock the configuration store (usually PingDS). This includes the LDAP host, port, bind DN, and references to the secret stores needed to decrypt the configuration.

The location of this file is determined by the Configuration Directory path specified during the initial setup. By default, PingAM creates its configuration directory in the home directory of the user running the web container. The standard path structure is <user-home>/<am-instance-dir>/. Therefore, the boot.json file is located at the root of this instance directory: <user-home>/<am-instance-dir>/boot.json.

Options A and D are incorrect because they place the file inside a /config subdirectory; while AM has many config files in subdirectories, the boot.json sits at the root to be accessible as the first point of entry.

Option B is incorrect because it suggests the file is stored within the Tomcat webapps folder. PingAM specifically avoids storing configuration data within the web application binaries to ensure that configuration persists even if the .war file is deleted or redeployed.

Understanding the location of boot.json is vital for DevOps engineers who need to automate the deployment of PingAM using tools like Ansible or when troubleshooting a "Failed to connect to the configuration store" error during server startup.

### NEW QUESTION # 63

Which of the following are existing script types in PingAM?

- A) Decision node script for authentication trees
- B) End User user interface theme script
- C) OpenID Connect claims script
- D) Policy condition script

- A. A, C and D
- B. B, C and D
- C. A, B and C
- D. A, B and D

**Answer: A**

Explanation:

PingAM 8.0.2 is highly extensible through its Scripting Engine, which supports Groovy and JavaScript. However, scripts can only be applied to specific "hooks" or "extension points" defined by the platform.

According to the "Scripting" and "Script Types" reference in the PingAM 8.0.2 documentation, the standard supported script types are:

Decision node script (A): Used within Authentication Trees via the "Scripted Decision Node." These scripts allow for complex logic, such as checking user attributes, calling external APIs, or evaluating risk before deciding which path a user should take in their journey.

OpenID Connect claims script (C): This script type is used to customize the claims returned in OIDC ID Tokens or at the UserInfo endpoint. It allows administrators to transform internal LDAP attributes into the specific JSON format required by OIDC clients.

Policy condition script (D): Used within Authorization Policies. These scripts define custom logic for granting or denying access (e.g., "Allow access only if the user is connecting from a specific IP range and it is between 9 AM and 5 PM").

Why Statement B is incorrect: There is no such thing as an "End User user interface theme script" in the PingAM scripting engine. UI customization (Theming) in PingAM 8.0.2 is handled through the XUI framework using CSS, HTML templates, and configuration JSON files, or by building a custom UI using the Ping SDKs. It does not use the server-side Groovy/JavaScript scripting engine that governs authentication and authorization logic. Therefore, the valid script types are A, C, and D, making Option D the correct choice.

## NEW QUESTION # 64

.....

I know you must want to get a higher salary, but your strength must match your ambition! The opportunity is for those who are prepared! PT-AM-CPE exam questions can help you improve your strength! You will master the most practical knowledge in the shortest possible time. It is also very easy if you want to get the PT-AM-CPE certificate. As long as you buy our PT-AM-CPE study braindumps and practice step by step, you are bound to pass the exam.

**PT-AM-CPE Exam Forum:** <https://www.pass4sures.top/Ping-Identity-Certifications/PT-AM-CPE-testking-braindumps.html>

Considering all customers' sincere requirements, PT-AM-CPE test question persist in the principle of "Quality First and Clients Supreme" all along and promise to our candidates with plenty of high-quality products, considerate after-sale services as well as progressive management ideas, You will find all the updated PT-AM-CPE exam test questions and answers in our braindumps, For you to make a satisfactory choice PT-AM-CPE training materials: Certified Professional - PingAM Exam gives you three versions.

Lower the costs of starting and operating a small business, Open PT-AM-CPE Exams Directory has that information stored as part of the user object, along with the relevant user ID and group ID numbers.

Considering all customers' sincere requirements, PT-AM-CPE Test Question persist in the principle of "Quality First and Clients Supreme" all along and promise to our candidates with plenty of PT-AM-CPE high-quality products, considerate after-sale services as well as progressive management ideas.

## PT-AM-CPE - Certified Professional - PingAM Exam –Valid Official Cert Guide

You will find all the updated PT-AM-CPE exam test questions and answers in our braindumps, For you to make a satisfactory choice PT-AM-CPE training materials: Certified Professional - PingAM Exam gives you three versions.

If you have any questions about Pass4sures or any professional issues, here are PT-AM-CPE Reliable Exam Papers some Frequently Asked Questions from our customers, However, if by any hard luck, you do not succeed in the exam, we are ready to refund your money.
