ExamCost provide different training tools and resources to prepare for the Palo Alto Networks PSE-Cortex Exam. The preparation guide includes courses, practice test, test engine and part free PDF download.

All points of questions are correlated with the newest and essential knowledge. The second one of PSE-Cortex test guide is emphasis on difficult and hard-to-understand points. Experts left notes for your reference, and we believe with their notes things will be easier. In addition, the new supplementary will be sent to your mailbox if you place order this time with beneficial discounts at intervals. So our PSE-Cortex Exam Questions mean more intellectual choice than other practice materials.

Download PSE-Cortex Demo | Valid PSE-Cortex Study Guide

Our PSE-Cortex exam torrent is compiled by first-rank experts with a good command of professional knowledge, and our experts adept at this exam practice materials area over ten years' long, so they are terrible clever about this thing. They exert great effort to boost the quality and accuracy of our PSE-Cortex study tools and is willing to work hard as well as willing to do their part in this area. The wording is fully approved in our PSE-Cortex Exam Guide. They handpicked what the PSE-Cortex exam torrent usually tests in exam recent years and devoted their knowledge accumulated into these PSE-Cortex study tools. Besides, they keep the quality and content according to the trend of the PSE-Cortex practice exam. As approved PSE-Cortex exam guide from

professional experts their quality is unquestionable.

Palo Alto Networks System Engineer - Cortex Professional Sample Questions (Q137-Q142):

NEW QUESTION # 137

Which statement applies to the differentiation of Cortex XDR from security information and event management (SIEM)?

- A. Cortex XDR allows just logging into the console and out of the box the events were blocked as a proactive approach.
- B. Cortex XDR requires a large and diverse team of analysts and up to several weeks for simple actions like creating an alert.
- C. SIEM has been entirely designed and built as cloud-native, with the ability to stitch together cloud logs, on-premises logs, third-party logs, and endpoint logs.
- D. SIEM has access to raw logs from agents, where Cortex XDR traditionally only gets alerts.

Answer: A

NEW QUESTION # 138

How many use cases should a POC success criteria document include?

- A. only 1
- B. no more than 5
- C. no more than 2
- D. 3 or more

Answer: C

NEW QUESTION # 139

What must a customer deploy prior to collecting endpoint data in Cortex XSIAM?

- A. XDR agent
- B. Broker VM
- C. External dynamic list
- D. Playbook

Answer: A

Explanation:

25 web pages

As a Palo Alto Cortex Professional, I'll provide a detailed explanation for Question 139: What must a customer deploy prior to collecting endpoint data in Cortex XSIAM? along with the reasoning and references based on Palo Alto Networks' official documentation and product knowledge.

C). XDR Agent

Cortex XSIAM (Extended Security Intelligence and Automation Management) is an AI-driven security operations platform designed to centralize and automate security operations across an enterprise, including endpoint, network, cloud, and identity data. To collect endpoint data specifically, Cortex XSIAM relies on the Cortex XDR Agent, which is a lightweight software component installed on endpoints (such as laptops, desktops, or servers). This agent is responsible for gathering telemetry data, monitoring endpoint activity, and enforcing security policies, which are then sent to the Cortex XSIAM cloud for analysis, detection, and response.

Here's why the XDR Agent is the correct choice and why the other options do not apply:

Option A: Playbook

* Explanation: A playbook in Cortex XSIAM (or its predecessor, Cortex XSOAR) is a predefined workflow that automates incident response tasks, such as investigating alerts or remediating threats.

While playbooks are critical for automation and orchestration, they are not involved in the initial collection of endpoint data.

Playbooks operate on data that has already been collected and ingested into the system. Therefore, deploying a playbook is not a prerequisite for collecting endpoint data.

* Conclusion: Incorrect.

Option B: Broker VM

* Explanation: The Broker VM is an optional component in the Cortex ecosystem that can be deployed to enhance connectivity and functionality, such as acting as a proxy for endpoints to communicate with the Cortex cloud, collecting logs, or running additional

services. While it can facilitate data forwarding or log collection in certain scenarios (e.g., from third-party sources), it is not a mandatory requirement for collecting endpoint data directly from devices managed by Cortex XSIAM. The XDR Agent can communicate with the Cortex cloud independently without a Broker VM.

* Conclusion: Incorrect.

Option C: XDR Agent

* Explanation: The Cortex XDR Agent is the core component required to collect endpoint data in Cortex XSIAM. It is installed on supported endpoints (e.g., Windows, macOS, Linux, or Android devices) and performs several key functions:

* Data Collection: Gathers detailed telemetry, including process execution, file activity, network connections, and system events.

* Prevention: Blocks exploits, malware, and fileless attacks using AI-driven techniques.

* Detection and Response: Provides real-time data to the Cortex cloud for advanced analytics and incident investigation. Without the XDR Agent deployed on endpoints, Cortex XSIAM cannot collect the necessary data to monitor, detect, or respond to endpoint-based threats. This makes it the essential prerequisite for endpoint data collection.

* Conclusion: Correct.

Option D: External Dynamic List (EDL)

* Explanation: An External Dynamic List (EDL) is a feature in Palo Alto Networks' ecosystem used to import and manage dynamic lists of indicators (e.g., IP addresses, URLs, or domains) for use in security policies or threat intelligence. While EDLs can enhance threat detection by providing additional context, they are not involved in the process of collecting endpoint data. They are a supplementary tool rather than a requirement for data collection.

* Conclusion: Incorrect.

References from Palo Alto Networks:

* Cortex XSIAM Datasheet (Palo Alto Networks):

* "Cortex XSIAM unifies best-in-class security operations functions, including Endpoint Detection and Response (EDR)... The platform leverages the Cortex XDR Agent to prevent endpoint attacks and collect full telemetry for detection and response."

* This highlights the XDR Agent's role as the mechanism for endpoint data collection.

* Cortex XSIAM Solution Brief (Palo Alto Networks):

* "XSIAM requires the deployment of the XSIAM Endpoint Agent to appropriate and compatible endpoints to collect telemetry and enforce security."

* This directly ties the agent to the data collection process.

* Cortex XDR Agent Documentation (Palo Alto Networks Cortex Documentation Portal):

* The agent is described as "a lightweight agent that stops threats with Behavioral Threat Protection, AI, and cloud-based analysis while collecting endpoint telemetry for extended detection and response."

* Available at: docs-cortex.paloaltonetworks.com

* What is Cortex XSIAM? (Palo Alto Networks Website):

* "Endpoint Protection Platform (EPP): Prevents endpoint attacks with a proven endpoint agent that blocks exploits, malware, and fileless attacks and collects full telemetry for detection and response."

* This reinforces the agent's foundational role in endpoint data collection.

NEW QUESTION # 140

Which task setting allows context output to a specific key?

- A. task output
- B. stop on errors
- C. tags
- D. extend context

Answer: D

NEW QUESTION # 141

Which feature of Cortex XSIAM displays an entire picture of an attack, including the originating process or delivery point?

- A. Automation playbook
- B. Sample analysis
- C. Correlation rule
- D. Causality View

Answer: D

Explanation:

The Causality View in Cortex XSIAM provides an entire picture of an attack, including the originating process or delivery point. It

allows security teams to visualize and understand the full sequence of events leading to an attack, helping to identify root causes and mitigate future risks.

NEW QUESTION # 142

.....

There are a lot of experts and professors in our company in the field. In order to meet the demands of all people, these excellent experts and professors from our company have been working day and night. They tried their best to design the best PSE-Cortex Study Materials from our company for all people. By our study materials, all people can prepare for their PSE-Cortex exam in the more efficient method.
