NEW QUESTION # 133
An engineer's organization system is registered in the following manner: <SiteName-SystemID- Username>.
The engineer created a new indicator type for detecting systems using regex. The engineer would now like the username to be created as a separate 'User' indicator automatically once a system is found.
What is the most efficient way for the engineer to achieve this?

- A. Change the reputation command for the internal system indicator type
- B. Create a custom indicator field named 'username' and link it to the internal system indicator
- C. Create a new indicator type of the internal username and have the regex included on any string that has dash at the beginning
- D. Create a new indicator type of the internal username and set a formatting script to extract only theusername

Answer: D

Explanation:
