MB-820 Test Result, MB-820 Top Questions

BONUS!!! Download part of ITExamSimulator MB-820 dumps for free: https://drive.google.com/open?id=1uZdS0sYGi5_aLy1LCcAm_oArvuwyQyFk

We respect the private information of our customers. If you buy the MB-820 exam materials from us, you personal information will be protected well. Once the payment finished, we will not look the information of you, and we also won't send the junk mail to your email address. What's more, we offer you free update for 365 days for MB-820 Exam Dumps, so that you can get the recent information for the exam. The latest version will be automatically sent to you by our system, if you have any other questions, just contact us.

Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	• Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
Topic 2	• Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.
Topic 3	• Describe Business Central: Describing the components and capabilities of Business Central, and describing the core solution and extensions approach for Business Central are focal points of this topic. It also explains the difference between Business Central Online and Business Central on-premises features.
Topic 4	• Install, develop, and deploy for Business Central: It delves into the installation and configuration of a Business Central development environment. Moreover, it discusses creating, debugging, and deploying an extension in Business Central.
Topic 5	• Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.

MB-820 Top Questions & MB-820 Lead2pass Review

If you buy our MB-820 exam questions, then we will provide you with 24-hour online service for our MB-820 study tool. If you have any questions, please send us an e-mail. We will promptly provide feedback to you and we sincerely help you to solve the problem. Our specialists check daily to find whether there is an update on the MB-820 Study Tool. If there is an update system, we will automatically send it to you. Therefore, we can guarantee that our MB-820 test torrent has the latest knowledge and keep up with the pace of change.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q49-Q54):

NEW QUESTION # 49
You create a 'Contoso Post" procedure to send an http POST request in JSON format. You publish the procedure to your environment.
You write the following procedure code:
The procedure does not work as expected.
You need to find and fix all errors in HTTP class usage.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation:
Statements:
* Replace line 16 with ResponseText := ResponseMessage
* answer: NoThe correct way to handle the response is to use ReadAs or similar methods to read the content from the response, not just assign the ResponseMessage directly to ResponseText.
Hence, this statement is incorrect.
* In line 13, change the 'text/plain' value to 'application/json'
* answer: YesSince the procedure is expected to send a POST request with JSON content, changing the content type to 'application/json' is correct. This ensures that the server understands the content is in JSON format.
* Replace line 14 with Client.DefaultRequestHeaders.Add('Authorization', 'Bearer ' + Token);
* answer: NoIn AL, the authorization headers are managed through HttpHeaders, and the Client.
DefaultRequestHeaders method is not available in AL. Therefore, this statement is incorrect.
* In line 10, replace WriteFrom with ReadAs
* answer: NoWriteFrom is the correct method for sending the request content, as it writes data from the RequestText variable to the HttpContent. ReadAs is used for reading the response, not for writing the request content.

NEW QUESTION # 50
A company has a Business Central online environment.
You need to create an HTTP GET request that connects to an external REST service.
Which solution should you use?

- A. Codeunit 1297 "Http Web Request Mgt"
- B. HttpContent data type variable
- C. HttpClient data type variable
- D. Codeunit 1299 "Web Request Helper"
- E. Codeunit S459 "JSON Management"

Answer: C

Explanation:
To create an HTTP GET request that connects to an external REST service in a Business Central online environment, the solution to use is the HttpClient data type variable (E). The HttpClient data type in AL language is designed for sending HTTP requests and receiving HTTP responses from a resource identified by a URI. This makes it the ideal choice for interfacing with external REST services, as it provides the necessary methods and properties to configure and execute HTTP GET requests, handle the responses, and process the data returned by the REST service. This approach is more direct and flexible compared to using specific codeunits like "Web Request Helper" (B) or "Http Web Request Mgt" (D), which might not provide the same level of control or specificity needed for RESTful interactions.

NEW QUESTION # 51
You have the following XML file sample for the Items list:
You plan to create the next XML file by using an XMLport object.
You need to complete the code segment to export the file in the required format How should you complete the code segment? To

answer, select the appropriate options in the answer area.

Answer:

Explanation:
Explanation:

NEW QUESTION # 52
A company has a test application.
A user observes the following error messages when running the test:
* "Unhandled Ul: Message'
* "Unhandled Ul: Confirm"
You need to resolve the errors. Which action should you take?

- A. Create a separate test runner codeunit that has Message Handler and Confirm Handler methods.
- B. Create the Message Handler and Confirm Handler methods in the test codeunit.
- C. Create the Message Handler and Confirm Handler methods in the test runner codeunit.
- D. Create a separate test codeunit that has Message Handler and Confirm Handler methods.

Answer: C

Explanation:
A user observes error messages such as:
"Unhandled UI: Message"
"Unhandled UI: Confirm"
These messages indicate that the test code is not handling system prompts like Message and Confirm dialogs, which can appear during test execution.
Options
Message Handler and Confirm Handler methods are used to intercept and handle these UI prompts during automated testing.
These methods should be added to the test runner codeunit, which is responsible for running the tests and handling these system-level interactions.

NEW QUESTION # 53
You develop a table named Contoso Setup and a page.
You plan to use No. Series to automatically assign a unique number to data entries. You set up No. Series on the Vendor Nos. field of the Contoso Setup table.
You need to apply the No. Series Design Pattern to the trigger Onlnsert().
Which four code segments should you use to develop the solution? To answer, move the appropriate code segments from the list of code segments to the answer area and arrange them in the correct order.

Answer:

Explanation:
Explanation:
Here is the correct sequence of the four code segments:
* if "No." = '' then begin
* ContosoSetup.Get();
* ContosoSetup.TestField("Vendor Nos.");
* NoSeriesManagement.InitSeries(ContosoSetup."Vendor Nos.", xRec."No. Series", 0D, "No.", "No. Series"); end;
* Check for empty value: The standard pattern for OnInsert is to only assign a number automatically if the user has not manually entered one. Therefore, you start with if "No." = '' then begin.
* Retrieve Setup: You must retrieve the setup record to access the configured No. Series code. The singleton pattern for setup tables uses ContosoSetup.Get();.
* Verify Configuration: Before attempting to use the series code, best practice dictates you ensure it is actually populated in the setup table. ContosoSetup.TestField("Vendor Nos."); checks this field.
* Initialize Series: Finally, you call the InitSeries function.
* Argument 1 (Source): ContosoSetup."Vendor Nos." is the field containing the Series Code (as stated in the prompt).

* Argument 2 (Previous): xRec."No. Series" handles standard renaming/validation logic.
* Argument 4 & 5 (Targets): "No." and "No. Series" are the fields on the current record being updated.
* Note: The other available InitSeries block is incorrect because it tries to read a field named "No. Series" from the ContosoSetup table, which does not match the prompt's description.

NEW QUESTION # 54
.....

To find the perfect MB-820 practice materials for the exam, you search and re-search without reaching the final decision and compare advantages and disadvantages with materials in the market. With systemic and methodological content within our MB-820 practice materials, they have helped more than 98 percent of exam candidates who chose our MB-820 guide exam before getting the final certificates successfully.
