MB-230시험응시 & MB-230시험대비 덤프 최신문제

Itcertkr는 다른 회사들이 이루지 못한 Itcertkr만의 매우 특별한 이점을 가지고 있습니다.Itcertkr의Microsoft MB-230덤프는 전문적인 엔지니어들의Microsoft MB-230시험을 분석이후에 선택이 된 문제들이고 적지않게 매우 가치 있는 질문과 답변들로 되어있는 학습가이드입니다.고객들은 단지 Itcertkr에서 제공해드리는Microsoft MB-230덤프의 질문과 답변들을 이해하고 마스터하면 첫 시험에서 고득점으로 합격할 것입니다.

최신 Microsoft Dynamics 365 MB-230 무료샘플문제 (Q205-Q210):

질문 # 205

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company provides clients with Dynamics 365 for Customer Service Voice of the Customer employee satisfaction surveys. The company has a standardized set of survey questions named Satisfaction Survey.

You need to customize the survey for each client.

Solution: Create custom question types. Add the custom question types to a new survey.

Customize the questions.

Does the solution meet the goal?

- A. No
- B. Yes

정답: A

질문 # 206

You are using Dynamics 365 for Customer Service.

You need to create the entitlements for your customers.

What should you do?

- A. Create an entity for each channel and configure the relationship with the entitlement.
- B. Configure entitlement channels.
- C. Configure routing rules.
- D. Create queues for each channel.

정답: B

질문 # 207

You make a phone call regarding an existing case record.

You need to create a phone call activity that appears on the case record timeline.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Cisco 300-445 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Insights and Alerts: This domain addresses configuring alert rules based on network conditions and end-user experience factors. It covers selecting metrics for stakeholders, validating alerts, and recommending network optimization for capacity planning.
주제 2	<ul style="list-style-type: none"> Data Analysis: This domain encompasses diagnosing network issues like packet loss, congestion, routing, and jitter, plus end-device problems. It includes analyzing web application performance and identifying security threats such as DDoS attacks, DNS hijacking, and BGP hijacking.
주제 3	<ul style="list-style-type: none"> Data Collection Implementation: This domain focuses on deploying enterprise and endpoint agents across infrastructure and end-user devices. It covers configuring network, DNS, voice, web, and endpoint tests using ThousandEyes and Meraki Insights, along with implementing synthetic web tests and authentication methods.
주제 4	<ul style="list-style-type: none"> Platforms and Architecture: This domain covers understanding monitoring agent types and placement, active versus passive monitoring, and ThousandEyes WAN Insights. It addresses Cisco platform integrations, metric baselines, and selecting appropriate integration methods and assurance platforms based on business requirements.

질문 # 59

When recommending optimization for network capacity planning, what factors are typically considered based on data interpretation?

- A. Topology and configuration changes
- B. Application performance
- C. Security vulnerabilities
- D. Server hardware upgrades

정답: A

설명:

When recommending optimization for network capacity planning, factors such as topology and configuration changes are typically considered based on data interpretation. This includes optimizing network architecture, adjusting routing protocols, and deploying additional network resources to improve performance, reliability, and scalability in response to changing traffic patterns and business requirements.

질문 # 60

Which integration type enables seamless data exchange between Cisco technologies and third-party ITSM platforms?

- A. API
- B. Alerting thresholds
- C. SNMP
- D. Open telemetry

정답: A

설명:

API integration enables seamless data exchange between Cisco technologies and third-party ITSM platforms, facilitating automation and interoperability in network assurance.

질문 # 61

What aspects should be validated when validating alert configuration and functionality in network assurance?

- A. Compliance with industry standards
- **B. Alert triggering conditions**
- C. Integration with ITSM tools
- **D. False positive rates**
- E. Alert escalation procedures
- **F. Notification channels**

정답: B,D,F

설명:

When validating alert configuration and functionality in network assurance, aspects such as alert triggering conditions, notification channels, and false positive rates should be validated to ensure accurate and efficient alerting.

질문 # 62

A CPU utilization alert for Endpoint Agents is triggering too frequently, creating alert noise. Which of the following steps would help reduce the sensitivity of the alert rule? (Select two)

- A. Enable the alert rule on more Endpoint Agents
- **B. Increase the number of agents that must exceed the CPU threshold to trigger the alert**
- **C. Adjust the alert rule to require more rounds of data to exceed the threshold**
- D. Lower the CPU utilization percentage in the alert condition

정답: B,C

설명:

Alert fatigue is a major operational challenge in network assurance. To make a CPU utilization alert for Endpoint Agents less sensitive and reduce "noise," an engineer must implement statistical filters that ignore transient spikes or isolated events.

The two most effective methods are:

Increase the agent count (Option A): By requiring a higher number or percentage of agents to simultaneously exceed the threshold, the system ensures the alert represents a widespread environmental issue rather than a single user running a CPU-intensive background process.

Require more rounds of data (Option C): Instead of alerting on a single measurement (1 of 1 round), the engineer can configure the rule to require the threshold to be breached for multiple consecutive checks (e.g., 2 of 3 rounds). This filters out brief, non-impactful CPU spikes that occur naturally during OS updates or browser startups.

질문 # 63

An engineer deployed a Cisco ThousandEyes Enterprise Agent on a Meraki MX to monitor a critical SaaS application. Which kind of monitoring has the engineer set up?

- A. agentless monitoring
- **B. active monitoring**
- C. passive monitoring
- D. server monitoring

정답: B

설명:

Enterprise Agents on Meraki MX actively generate synthetic traffic (HTTP requests, pings, path traces, DNS lookups) to measure SaaS performance. This is the definition of active monitoring, not passive or agentless monitoring.
