Fortinet FCP - FortiAnalyzer 7.4 Administrator Sample Questions (Q62-Q67):

NEW QUESTION # 62

Which statement correctly describes RAID 10 (1+0) on FortiAnalyzer?

- A. 11 combines mirroring striping and distributed parity to provide performance and fault tolerance
- B. It uses striping to provide performance and fault tolerance.
- C. A configuration with four disks, each with 2 TB of capacity, provides a total space of 4 TB.
- D. A configuration with four disks, each with 2 TB of capacity, provides a total space of 2 TB.

Answer: C

Explanation:

RAID 10 combines mirroring (RAID 1) and striping (RAID 0). In a RAID 10 setup with four disks, data is mirrored across two pairs of disks, and those pairs are striped for performance. This results in improved performance and fault tolerance, but the total usable storage is 50% of the total raw storage, meaning four 2 TB disks provide 4 TB of usable space.

NEW QUESTION # 65

Which two methods can you use to restrict administrative access on FortiAnalyzer? (Choose two.)

- A. Fabric connectors to external LDAP servers.
- B. Configure trusted hosts.
- C. Use administrator profiles.
- D. Limit access to specific virtual domains.

Answer: B,C

Explanation:

To restrict administrative access on FortiAnalyzer, two effective methods are using administrator profiles and configuring trusted hosts. Administrator profiles allow for defining the level of access and permissions for different administrators, controlling what each administrator can see and do within the FortiAnalyzer unit. Configuring trusted hosts enhances security by limiting administrative

access to specified IP addresses, ensuring that administrators can only connect from approved locations or networks, thus preventing unauthorized access from outside specified subnets or IP addresses.
