Due to lots of same products in the market, maybe you have difficulty in choosing the ISTQB-CTFL guide test. We can confidently tell you that our products are excellent in all aspects. You can directly select our products. Firstly, we have free trials of the ISTQB-CTFL exam study materials to help you know our products. One of the great advantages is that you will soon get a feedback after you finish the exercises. So you are able to adjust your learning plan of the ISTQB-CTFL Guide test flexibly. We hope that our new design can make study more interesting and colorful. You also can send us good suggestions about developing the study material.

We are so proud that we own the high pass rate of our ISTQB-CTFL exam braindumps to 99%. This data depend on the real number of our worthy customers who bought our ISTQB-CTFL exam guide and took part in the real exam. Obviously, their performance is wonderful with the help of our outstanding ISTQB-CTFL Exam Materials. We have the definite superiority over the other ISTQB-CTFL exam dumps in the market. If you choose to study with our ISTQB-CTFL exam guide, your success is 100 guaranteed.

ISTQB-CTFL Valid Test Experience - 100% ISTQB-CTFL Exam Coverage

ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) Practice exams (desktop and web-based) are designed solely to help you get your ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) certification on your first try. Our ISTQB ISTQB-CTFL mock test will help you understand the ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam inside out and you will get better marks overall. It is only because you have practical experience of the ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam even before the exam itself.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q190-Q195):

NEW QUESTION # 190

Consider the following statements (I to V) about software testing:

- I . Can be applied to non-executable work products.
- II . Can be used to measure performance efficiency.
- III . Can lead to the detection of defects.
- IV . Can find defects directly.
- V . Can identify unexpected behaviors caused by potential defects.

Which ONE of the following options is the list that characterizes static tests the BEST?

- A. Statements I, III, and IV
- B. Statements II, III, and V
- C. Statements II, IV, and V
- D. Statements I, II, and IV

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Static testing (A) applies to non-executable work products (I), such as requirements or code reviews. It also leads to defect detection (III) and finds defects directly (IV) without executing the software. Options B, C, and D incorrectly associate static testing with performance measurement (II) or dynamic testing aspects (V).

NEW QUESTION # 191

Consider a given test plan which, among others, contains the following three sections: "Test Scope", "Testing Communication", and "Stakeholders". The features of the test object to be tested and those excluded from the testing represent information that is:

- A. usually included in a test plan and, in the given test plan, it is more likely to be specified within "Testing Communication" rather than in the other two sections mentioned
- B. not usually included in a test plan, and therefore in the given test plan it should not be specified neither within the three sections mentioned, nor within the others
- C. usually included in a test plan and, in the given test plan, it is more likely to be specified within "Stakeholders" rather than in the other two sections mentioned
- D. usually included in a test plan and, in the given test plan, it is more likely to be specified within "Test Scope" rather than in the other two sections mentioned

Answer: D

Explanation:

The features of the test object to be tested and those excluded from the testing represent information that is usually included in a test plan and, in the given test plan, it is more likely to be specified within "Test Scope" rather than in the other two sections mentioned. The test scope defines the boundaries and limitations of the testing activities, such as the test items, the features to be tested, the features not to be tested, the test objectives, the test environment, the test resources, the test assumptions, the test risks, etc. The test scope helps to establish a common understanding of what is included and excluded from the testing, and to avoid ambiguity, confusion, or misunderstanding among the stakeholders. The other two sections, "Testing Communication" and "Stakeholders", are also important parts of a test plan, but they do not directly address the features of the test object. The testing communication describes the methods, frequency, and responsibilities for the communication and reporting of the testing progress, status, issues, and results. The stakeholders identify the roles and responsibilities of the people involved in or affected by the testing activities, such as the test manager, the test team, the project manager, the developers, the customers, the users, etc. References: ISTQB Certified

NEW QUESTION # 192

Which of the following statements is the BEST example of non-functional testing?

- A. Tests which calculate overtime pay for those employees entitled to such
- B. Tests related to "what" the system should do
- C. Tests based on the internal structure of a component or system
- D. Tests which capture the time it takes to save a file

Answer: D

Explanation:

Non-functional testing refers to testing aspects that do not relate to specific behaviors or functions of the software but to attributes such as performance, usability, reliability, etc. Tests that capture the time it takes to save a file directly relate to the performance of the system, thus falling under non-functional testing.

Reference:

ISTQB Certified Tester Foundation Level Syllabus v4.0, Section 1.2.5 "Functional and Non-functional Testing".

NEW QUESTION # 193

Which of the following statements about error guessing is true?

- A. Error guessing refers to the ability of a system or component to continue normal operation despite the presence of erroneous inputs
- B. Error guessing is a system that adopts artificial intelligence to predict whether software components are likely to contain defects or not
- C. Experienced testers, when applying error guessing, rely on the use of a high-level list of what needs to be tested as a guide to find defects
- D. Experienced testers, when applying error guessing technique, can anticipate where errors, defects and failures have occurred and target their tests at those issues

Answer: D

Explanation:

This answer is correct because error guessing is a test design technique where the experience and intuition of the tester are used to anticipate where errors, defects and failures have occurred or are likely to occur, and to design test cases to expose them. Error guessing can be based on factors such as the complexity of the system or component, the known or suspected weaknesses of the system or component, the previous history of defects, or the common types of errors in the domain or technology. Error guessing can be used as a complementary technique to other more systematic or formal techniques, or when there is insufficient information or time to apply them. Reference: ISTQB Glossary of Testing Terms v4.0, ISTQB Foundation Level Syllabus v4.0, Section 2.3.2.5

NEW QUESTION # 194

Which of the following statements about statement coverage is TRUE?

- A. Achieving 100% statement coverage ensures that no variable within the code has been used without being initialised.
- B. Achieving 80% statement coverage ensures that 80% of all executable statements within the code have been exercised.
- C. Achieving 90% statement coverage ensures that 90% branch coverage is achieved.
- D. Achieving 100% statement coverage ensures that 100% branch coverage is achieved

Answer: B

Explanation:

Statement coverage measures the percentage of executable statements that have been exercised by a test suite. Achieving 80% statement coverage means that 80% of the executable code lines have been tested. This metric helps in understanding how much of the code has been covered during testing. However, it does not guarantee branch coverage, variable initialization, or detection of all possible defects. The ISTQB CTFL Syllabus v4.0 explains statement coverage as a measure of the extent to which the code has

been tested, without implying other types of coverage or testing goals.

NEW QUESTION # 195
