1z0-1075-25 Practice Materials: Oracle Manufacturing Cloud 2025 Implementation Professional & 1z0-1075-25 Test King & 1z0-1075-25 Test Questions

Pass rate is 98.45% for 1z0-1075-25 learning materials, which helps us gain plenty of customers. You can pass the exam and obtain the certification successfully if you choose us. 1z0-1075-25 exam braindumps contain both questions and answers, and it's convenient for you to check the answers after practicing. You can try free demo before buying 1z0-1075-25 Exam Materials, so that you can know what the complete version is like. We provide you with free update for 365 days after purchasing, and the update

version for 1z0-1075-25 exam dumps will be sent to you automatically. You just need to check your email and change your learning ways according to new changes.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which three statements are true about the main areas of Managerial Accounting?

- A. Cost method can be defined with granularity down to individual Items.
- B. Landed Cost Management gives organizations financial visibility into their extended supply chain costs.
- C. Receipt Accounting Is the application that performs accrual accounting for all types of receipts.
- D. Supply Chain Orchestration automatically selects the correct process based on user-defined Subledger Accounting rules when a supply creation Is initiated.

Answer: A,B,C

Explanation:

In Oracle Manufacturing Cloud and related financial applications, managerial accounting plays a significant role in tracking and managing costs across supply chain and manufacturing activities. The following is a breakdown of the correct statements:

* Statement A : Receipt Accounting is the application that performs accrual accounting for all types of receipts - Receipt Accounting is a crucial module in Oracle Cloud that supports the tracking of costs and performs accruals related to receipts. This includes processes such as procurement receipts, interorganization transfers, and supplier shipments. This allows organizations to recognize and account for the expenses associated with these receipts.

Oracle Cloud SCM Documentation for Receipt Accounting outlines how the system manages accruals and matches them with purchase orders and invoices.

Statement B : Landed Cost Management gives organizations financial visibility into their extended supply chain costs - Landed Cost Management is designed to capture additional costs that arise during the transportation, handling, and processing of goods. This includes costs like shipping, insurance, and customs duties. By including these in the overall cost, it provides a more comprehensive view of the actual costs of goods in the supply chain.

Reference : Oracle Fusion SCM Guide, "Landed Cost Management," describes how it aggregates various indirect supply chain costs to give better financial visibility.

Statement D : Cost method can be defined with granularity down to individual items - In Oracle Manufacturing Cloud, costing methods can be assigned not only at the organization level but also at a granular level down to individual items. This provides flexibility in defining different costing strategies for different products depending on their nature, manufacturing process, or market conditions.

Reference : Oracle Manufacturing Cloud User Guide explains the flexibility in configuring cost methods at different organizational and item-specific levels.

Incorrect Statements:

Statement C : Supply Chain Orchestration automatically selects the correct process based on user-defined Subledger Accounting rules when a supply creation is initiated - While Supply Chain Orchestration automates various supply chain processes, it does not select processes based on Subledger Accounting rules.

The orchestration system is more focused on managing and coordinating supply chain processes rather than determining accounting rules.

NEW QUESTION # 14

Your client is planning to override the Plant Production Calendar with One or More Date-Effective Work Center Calendars. You need to explain the consideration when using the Override the Plant Production Calendar with One or More Date-Effective Work Center Calendars feature.

Which three statements are true when overriding the production calendar?

- A. Even if there are override calendars, the lead time calculation in days for an item remains based on the plant calendar and not on work center calendars.
- B. The Work Execution Work Area Infolets and Manage Production Exceptions page are based on the plant calendar and not on work center calendars.
- C. While defining override calendars, you need to ensure that the date effective range for a work center calendar association can be overlapping and contiguous.
- D. Supplier operations used in outside processing use the work center calendar in work order scheduling.
- E. When the user executes search action in the Review Dispatch List page, if more than one work center are selected and if

the start date or completion date is based on Shift-based search, then the operations are queried based on the shifts of the plant calendar only.

Answer: A,B,E

Explanation:

Overriding the plant production calendar with date-effective work center calendars provides flexibility in scheduling specific work centers with different operating hours. However, certain aspects of production planning and execution remain tied to the plant-level calendar. Here are the details:

* Statement A : The Work Execution Work Area Infolets and Manage Production Exceptions page are based on the plant calendar and not on work center calendars - Even when work centers have their own calendars, the high-level overview and exception reporting remain based on the plant calendar.

* Statement C : Lead time calculation in days for an item remains based on the plant calendar - Lead times are calculated using the plant calendar, regardless of work center-specific calendars, ensuring consistency in planning.

* Statement D : Search actions in the Review Dispatch List page query operations based on the plant calendar shifts when multiple work centers are selected - For consistency in dispatching, the system references the plant calendar when shift-based search parameters are used across multiple work centers.

Incorrect Statements:

* Statement B : Date-effective ranges for work center calendars should not overlap for accuracy in scheduling.

* Statement E : Supplier operations in outside processing generally rely on the plant calendar for consistency unless explicitly configured otherwise.

Oracle Manufacturing Cloud documentation on " Calendar Overrides " explains how plant and work center calendars interact and the impact on work execution, scheduling, and reporting

NEW QUESTION # 15

Production operations need operators to execute the right steps to produce quality products, so want to use " View Document Items on a Dispatch List. " Which statement is NOT true?

- A. You cannot view the document item attachment on the Manage Supplier Operations page.
- **B. You will always see the active revision of the attachment from currently effective revision of the document from Master Organization.**
- C. You can add attachments to the document item and invoke the engineering change order to release the latest revision of the document item and attachment.
- D. You can view the document item attachment in the dispatch list and on the Manage Supplier Operations page by using the attachment icon.

Answer: B

Explanation:

When using the " View Document Items on a Dispatch List " functionality, production operators can view and access necessary document attachments to ensure correct steps in the manufacturing process. The statement that is not true is:

* Statement B is incorrect because you do not always see the active revision of the attachment from the currently effective revision in the Master Organization. The revision displayed in the dispatch list may depend on the specific version that was assigned to the work order or operation at the time of creation, not necessarily the most current revision in the Master Organization.

Correct statements:

* Statement A : Document attachments cannot be viewed on the Manage Supplier Operations page.

* Statement C : Attachments can be added to document items, and updates can be managed through engineering change orders.

* Statement D : Document item attachments are viewable both in the dispatch list and on the Manage Supplier Operations page via the attachment icon.

Oracle Manufacturing Cloud's " Dispatch List " functionality documentation outlines how document item attachments are handled and displayed.

NEW QUESTION # 16

Your customer runs two daily shifts in their plant: morning shift and evening shift. A resource, LATHE, is assigned to the work center W1. There are five units of LATHE available, of which three units are available for the morning shift and the remaining units for the evening shift.

Which two actions must the customer perform to associate LATHE with W1?

- A. Select the Available 24 Hours check box and, in the Resource Availability region, enter 3 against LATHE In the Morning

Shift column.

- B. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter 60% against LATHE in the Morning Shift column.
- C. Select the Available 24 Hours check box and, in the Resource Availability region, enter 2 against LATHE in the Evening Shift column.
- D. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter ~z against LATHE in the Evening Shift column,
- E. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter 40% against LATHE In the Evening Shift column.
- F. Deselect the Available 24 Hours check box and, in the Resource Availability region, enter 3 against LATHE in the Morning Shift column.

Answer: D,F

Explanation:

To allocate specific units of the LATHE resource to morning and evening shifts in Oracle Manufacturing Cloud, you need to configure the resource availability per shift as follows:

- * Deselect the Available 24 Hours check box - This ensures that the resource availability is limited to specific shifts instead of being available 24/7.
- * Enter 3 in the Morning Shift column - Assigning 3 units of LATHE to the morning shift allocates those units for use only during the morning.
- * Enter 2 in the Evening Shift column - Assigning 2 units to the evening shift ensures that the remaining LATHE units are available for the evening shift.

Oracle Cloud SCM documentation details how to manage Resource Availability for specific shifts by configuring the number of units assigned to different shifts in a work center.

NEW QUESTION # 17

In which two places can you create and edit user-defined work order statuses?

- A. Work Definition work area tasks
- B. Functional Setup Manager > Setup: Manufacturing and Supply Chain Materials Management
- C. Work Execution work area tasks
- D. Scheduled Processes

Answer: B,C

Explanation:

User-defined work order statuses can be created and edited in the following areas of Oracle Manufacturing Cloud:

- * Functional Setup Manager : This is where the configuration of user-defined work order statuses is performed under the " Manufacturing and Supply Chain Materials Management " setup. Users can define new statuses and configure their behavior.
- * Work Execution work area tasks : Users can also manage work order statuses directly in the Work Execution area, which is part of the day-to-day management of production orders.

Incorrect options:

- * Scheduled Processes (A) and Work Definition work area tasks (B) are not areas where work order statuses are defined or edited.

Oracle Cloud ' s Functional Setup Manager and Work Execution work area documentation outline how user- defined statuses are configured and maintained.

NEW QUESTION # 18

.....

As a member of the people working in the 1z0-1075-25 industry, do you have a headache for passing some Oracle certification exams? Generally, 1z0-1075-25 certification exams are used to test the examinee's related 1z0-1075-25 professional knowledge and experience and it is not easy pass these exams. For the examinees who are the first time to participate 1z0-1075-25 certification exam, choosing a good pertinent training program is very necessary. CramPDF can offer a specific training program for many examinees participating in Oracle certification exams. Our training program includes simulation test before the formal examination, specific training course and the current exam which has 95% similarity with the real exam. Please add CramPDF to you shopping car quickly.
