Data-Con-101인증시험 & Data-Con-101인증자료

DumpTOP는 DumpTOP의 Salesforce 인증 Data-Con-101 덤프 자료를 공부하면 한방에 시험패스하는 것을 굳게 약속드립니다. DumpTOP의 Salesforce 인증 Data-Con-101 덤프로 공부하여 시험불합격받으면 바로 덤프비용 전액 환불처리해 드리는 서비스를 제공해드리기에 아무런 무답없는 시험준비공부를 할 수 있습니다.

최신 Salesforce Data Cloud Data-Con-101 무료 샘플문제 (Q66-Q71):

질문 # 66

A user wants to be able to create a multi-dimensional metric to identify unified individual lifetime value (LTV). Which sequence of data model object (DMO) joins is necessary within the calculated Insight to enable this calculation?

- A. Sales Order > Individual > Unified Individual
- **B. Unified Individual > Unified Link Individual > Sales Order**
- C. Unified Individual > Individual > Sales Order
- D. Sales Order > Unified Individual

정답: B

설명:

To create a multi-dimensional metric to identify unified individual lifetime value (LTV), the sequence of data model object (DMO) joins that is necessary within the calculated Insight is Unified Individual > Unified Link Individual > Sales Order. This is because the Unified Individual DMO represents the unified profile of an individual or entity that is created by identity resolution¹. The Unified Link Individual DMO represents the link between a unified individual and an individual from a source system². The Sales Order DMO represents the sales order information from a source system³. By joining these three DMOs, you can calculate the LTV of a unified individual based on the sales order data from different source systems. The other options are incorrect because they do not join the correct DMOs to enable the LTV calculation. Option B is incorrect because the Individual DMO represents the source profile of an individual or entity from a source system, not the unified profile⁴. Option C is incorrect because the join order is reversed, and you need to start with the Unified Individual DMO to identify the unified profile. Option D is incorrect because it is missing the Unified Link Individual DMO, which is needed to link the unified profile with the source profile. 질문 # 67

Cumulus Financial segregates its sales CRM data based on Region for its Data Cloud users. Multiple data spaces are configured: a default space and two additional spaces tailored for EMEA and APAC regions.

EMEA sales reps who need temporary access to visualize data for both regions say that they cannot visualize APAC data. APAC sales reps can visualize the corresponding segmented data.

Which statement describes the cause of this issue?

- **A. The EMEA sales reps have not been assigned to the permission set associated with the APAC data space.**
- B. The APAC data space is not associated with any permission set.
- C. The APAC data space is not associated with any profile.
- D. The EMEA sales reps have not been assigned to the profile associated with the APAC data space.

정답: A

설명:

The issue arises because the EMEA sales reps cannot visualize APAC data, while APAC sales reps can access their segmented data. The root cause is that the EMEA sales reps lack the necessary permissions to access the APAC data space. Here's why:

Understanding the Issue

Cumulus Financial uses data spaces to segregate CRM data by region (default, EMEA, APAC).

EMEA sales reps need temporary access to APAC data but are unable to view it.

APAC sales reps can access their corresponding segmented data without issues.

Why Permission Sets?

Data Space Access Control :

Data spaces in Salesforce Data Cloud are secured using profiles and permission sets .

Users must be explicitly granted access to a data space via their assigned profiles or permission sets.

Root Cause Analysis :

Since APAC sales reps can access their data, the APAC data space is properly configured.

The issue lies with the EMEA sales reps, who likely do not have the required permission set granting access to the APAC data space.

Temporary Access :

Temporary access can be granted by assigning the appropriate permission set to the EMEA sales reps.

Steps to Resolve the Issue

Step 1: Identify the Required Permission Set

Navigate to Setup > Permission Sets and locate the permission set associated with the APAC data space.

Step 2: Assign the Permission Set

Assign the APAC data space permission set to the EMEA sales reps requiring temporary access.

Step 3: Verify Access

Confirm that the EMEA sales reps can now visualize APAC data.

Step 4: Revoke Temporary Access

Once the temporary access period ends, remove the permission set from the EMEA sales reps.

Why Not Other Options?

A). The EMEA sales reps have not been assigned to the profile associated with the APAC data space :Profiles are typically broader and less flexible than permission sets for managing temporary access.

B). The APAC data space is not associated with any permission set :This is incorrect because APAC sales reps can access their data, indicating the data space is properly configured.

C). The APAC data space is not associated with any profile :Similar to Option B, this is incorrect because APAC sales reps can access their data.

Conclusion

The issue is resolved by ensuring that the EMEA sales reps are assigned the permission set associated with the APAC data space . This grants them temporary access to visualize APAC data.

질문 # 68

Cumulus Financial wants to be able to track the daily transaction volume of each of its customers in real time and send out a notification as soon as it detects volume outside a customer's normal range.

What should a consultant do to accommodate this request?

- A. Use a streaming insight paired with a data action
- B. Use streaming data transform combined with a data action.
- C. Use streaming data transform with a flow.
- D. Use a calculated insight paired with a flow.

정답 : A

설명:

A streaming insight is a type of insight that analyzes streaming data in real time and triggers actions based on predefined conditions. A data action is a type of action that executes a flow, a data action target, or a data action script when an insight is triggered. By using a streaming insight paired with a data action, a consultant can accommodate Cumulus Financial's request to track the daily transaction volume of each customer and send out a notification when the volume is outside the normal range. A calculated insight is a type of insight that performs calculations on data in a data space and stores the results in a data extension. A streaming data transform is a type of data transform that applies transformations to streaming data in real time and stores the results in a data extension. A flow is a type of automation that executes a series of actions when triggered by an event, a schedule, or another flow. None of these options can achieve the same functionality as a streaming insight paired with a data action. 질문 # 69

A Data Cloud consultant is evaluating the initial phase of the Data Cloud lifecycle for a company.

Which action is essential to effectively begin the Data Cloud lifecycle?

- A. Identify use cases and the required data sources and data quality.
- B. Use calculated insights determine the benefits of Data Cloud for this company.
- C. Migrate the existing data into the Customer 360 Data Model.
- D. Analyze and partition the data into data spaces.

정답 : A

설명:

Data Cloud Lifecycle: The initial phase of the Salesforce Data Cloud lifecycle is critical for setting the foundation for successful data integration and utilization.

Identifying Use Cases:

Importance: Defining clear use cases helps in understanding the business objectives and how Data Cloud can address them.

Required Data Sources: Identifying the necessary data sources ensures that relevant data is ingested into Data Cloud.

Data Quality: Assessing data quality is essential for accurate and reliable data analysis and insights.

Actions:

Step 1: Engage with stakeholders to define specific use cases for Data Cloud.

Step 2: Identify and catalog the required data sources for these use cases.

Step 3: Evaluate the quality of data from these sources to ensure they meet the standards for effective data analysis.

질문 # 70

A customer is trying to activate data from Data Cloud to an Amazon S3 Cloud File Storage Bucket.

Which authentication type should the consultant recommend to connect to the S3 bucket from Data Cloud?

- A. Use an S3 Private Key Certificate.
- B. Use an S3 Encrypted Username and Password.
- C. Use a JWT Token generated on S3.
- **D. Use an S3 Access Key and Secret Key.**

정답: D

설명:

To use the Amazon S3 Storage Connector in Data Cloud, the consultant needs to provide the S3 bucket name, region, and access key and secret key for authentication. The access key and secret key are generated by AWS and can be managed in the IAM console. The other options are not supported by the S3 Storage Connector or by Data Cloud.
