In today's society, everyone wants to find a good job and gain a higher social status. As we all know, the internationally recognized 1z0-1075-25 certification means that you have a good grasp of knowledge of certain areas and it can demonstrate your ability. This is a fair principle. But obtaining this 1z0-1075-25 certificate is not an easy task, especially for those who are busy every day. We do not charge extra service fees, but the service quality is high. Your satisfaction is the greatest affirmation for us and we sincerely serve you. Our 1z0-1075-25 Exam Guide deliver the most important information in a simple, easy-to-understand language that you can learn efficiently learn with high quality. Whether you are a student or an in-service person, our 1z0-1075-25 exam torrent can adapt to your needs.

By offering these outstanding 1z0-1075-25 dump, we have every reason to ensure a guaranteed exam success with a brilliant percentage. The feedback of our customers is enough to legitimize our claims on our 1z0-1075-25 exam questions. Despite this, we offer you a 100% return of money, if you do not get through the exam, preparing for it with our 1z0-1075-25 Exam Dumps. No amount is deducted while returning the money.

Certification 1z0-1075-25 Sample Questions, 1z0-1075-25 Exam Actual Questions

In cyber age, it's essential to pass the 1z0-1075-25 exam to prove ability especially for lots of office workers. Our company, with a

history of ten years, has been committed to making efforts on developing 1z0-1075-25 exam guides in this field. Since the establishment, we have won wonderful feedback from customers and ceaseless business and continuously worked on developing our 1z0-1075-25 Exam prepare to make it more received by the public. Moreover, our understanding of the importance of information technology has reached a new level. Efforts have been made in our experts to help our candidates successfully pass 1z0-1075-25 exam. Seldom dose the e-market have an authorized study materials for reference.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q17-Q22):

NEW QUESTION # 17

You are implementing project-driven supply chain functionality. You need to set up movement requests to issue or transfer project material to manage the inventory associated with projects and tasks.

Which two are types of movement requests to issue or transfer project material?

- A. Transfer project material from one subinventory to another.
- B. Perform manual pick for such movement requests using the project material, common inventory, or inventory from another project.
- C. Pick transactions Interfaced by the project costing project and task using the project material, common Inventory, or Inventory from another project.
- D. Create o movement receipt line with the Project Costing widget.

Answer: A,B

Explanation:

When setting up movement requests in a project-driven supply chain, you need to manage inventory associated with specific projects and tasks. The two correct types of movement requests in this context are:

* Statement A : Transfer project material from one subinventory to another - This is a standard type of movement request in Oracle Cloud, allowing project materials to be transferred between subinventories.

It is essential for managing inventory tied to specific projects and tasks, ensuring that materials are available where needed for project execution.

Oracle Fusion SCM Cloud: Inventory Management Guide describes how material transfers can be executed between subinventories, including project-based transfers.

Statement D : Perform manual pick for such movement requests using the project material, common inventory, or inventory from another project - Manual picking for project-specific material is another supported operation. It allows users to perform manual picks from various sources, such as project material, common inventory, or even inventory from other projects.

Reference : Oracle Project-Driven Supply Chain documentation explains how manual picks can be configured to source inventory based on project requirements.

Incorrect Statements:

Statement B : Pick transactions are not interfaced specifically by project costing. Although project costing is relevant for tracking costs, it is not the driving factor behind pick transactions.

Statement C : There is no concept of creating a movement receipt line with the " Project Costing widget " in Oracle Manufacturing Cloud.

NEW QUESTION # 18

Your client informs you that after running the " Process Item Structure Changes to Work Definitions " scheduled process, they received a workflow notification.

Which statement is NOT a workflow notification that you might get if automation is not performed?

- A. The manufacturing plant Is enabled for ERES, the work definition changes are not expected to go through an approval process.
- B. The replacement component has been assigned as an ad hoc Item to the same operation as the original component.
- C. The original component has been assigned to more than one work definition operation.
- D. The original component is not assigned to any work definition operation.

Answer: A

Explanation:

After running the " Process Item Structure Changes to Work Definitions " scheduled process, a series of workflow notifications may be triggered if the automation is not performed properly. The following notifications can be expected in scenarios where manual intervention is needed:

* Statement B is incorrect because, in Oracle Manufacturing Cloud, if the manufacturing plant is enabled for ERES (Engineering Release Execution System), it generally implies that any changes in work definitions would still require an approval process for validation and control. The fact that ERES is enabled would not automatically bypass the approval process.

Correct Notifications:

* Statement A : You may receive a notification that a replacement component has been assigned as an ad hoc item to the same operation where the original component was assigned.

* Statement C : A notification may alert you that the original component is not assigned to any work definition operation, signaling a potential issue that requires manual intervention.

* Statement D : It is also possible to receive a notification indicating that the original component has been assigned to more than one work definition operation, which may require review or adjustment.

Oracle Cloud documentation on "Process Item Structure Changes to Work Definitions " explains the notifications and approval steps involved when work definitions are modified without automation.

NEW QUESTION # 19

Which three actions can a supervisor perform to annul or correct mistakes in a completed work order, committed by a user while entering work order details?

- A. Reverse a Closed order to Open.
- B. Reverse the product at the last operation.
- C. Reverse from Scrap to Ready.
- D. Correct the Product entered at work order.
- E. Reverse at an operation.

Answer: B,C,E

Explanation:

If a mistake is made in a completed work order , supervisors have the ability to perform certain corrective actions to reverse transactions or correct errors:

* Reverse from Scrap to Ready (C) : This action allows the supervisor to reverse a product that was incorrectly marked as scrap back to a ready state, making it available for further operations.

* Reverse at an operation (D) : If the mistake occurred during a specific operation, the supervisor can reverse the transaction at that operation and correct the mistake.

* Reverse the product at the last operation (E) : The supervisor can reverse a transaction at the last operation to make corrections to the final product before closing the work order.

Incorrect options:

* A (Reverse a Closed order to Open) : Once a work order is closed, it cannot be reopened. Reversing transactions must happen before the order is officially closed.

* B (Correct the Product entered at work order) : The product specified in a work order cannot be changed once the order has been processed and completed.

Oracle Cloud documentation on Work Order Reversal Transactions explains the capabilities for reversing scrap, operation, and product entries to correct errors in work orders.

NEW QUESTION # 20

Your client is planning to override the Plant Production Calendar with One or More Date-Effective Work Center Calendars. You need to explain the consideration when using the Override the Plant Production Calendar with One or More Date-Effective Work Center Calendars feature.

Which three statements are true when overriding the production calendar?

- A. Supplier operations used in outside processing use the work center calendar in work order scheduling.
- B. The Work Execution Work Area Infolets and Manage Production Exceptions page are based on the plant calendar and not on work center calendars.
- C. Even if there are override calendars, the lead time calculation in days for an item remains based on the plant calendar and not on work center calendars.
- D. While defining override calendars, you need to ensure that the date effective range for a work center calendar association can be overlapping and contiguous.
- E. When the user executes search action in the Review Dispatch List page, if more than one work center are selected and if the start date or completion date is based on Shift-based search, then the operations are queried based on the shifts of the plant calendar only.

Answer: B,C,E

Explanation:

Overriding the plant production calendar with date-effective work center calendars provides flexibility in scheduling specific work centers with different operating hours. However, certain aspects of production planning and execution remain tied to the plant-level calendar. Here are the details:

* Statement A : The Work Execution Work Area Infolets and Manage Production Exceptions page are based on the plant calendar and not on work center calendars - Even when work centers have their own calendars, the high-level overview and exception reporting remain based on the plant calendar.

* Statement C : Lead time calculation in days for an item remains based on the plant calendar - Lead times are calculated using the plant calendar, regardless of work center-specific calendars, ensuring consistency in planning.

* Statement D : Search actions in the Review Dispatch List page query operations based on the plant calendar shifts when multiple work centers are selected - For consistency in dispatching, the system references the plant calendar when shift-based search parameters are used across multiple work centers.

Incorrect Statements:

* Statement B : Date-effective ranges for work center calendars should not overlap for accuracy in scheduling.

* Statement E : Supplier operations in outside processing generally rely on the plant calendar for consistency unless explicitly configured otherwise.

Oracle Manufacturing Cloud documentation on " Calendar Overrides " explains how plant and work center calendars interact and the impact on work execution, scheduling, and reporting

NEW QUESTION # 21

Your customer runs production 24 x 7 x 365 and wants to track Overall Equipment Effectiveness (OEE) online. Which key setup can they use to achieve this?

- A. Enable IoT Production Monitoring and turn on " Enable synchronization to IoT Production
- B. Enable IoT Asset Monitoring and turn on " Enable synchronization to IoT Asset Monitoring " in Resources.
- C. Enable IoT Fleet Monitoring and enable synchronization to IoT Production Monitoring in Plant Parameters.
- D. Enable IoT Asset Monitoring and turn on " Enable synchronization to IoT Asset Monitoring " In Plant Parameters.
- E. **Enable IoT Production Monitoring and turn on " Enable synchronization to IoT Production Monitoring " In Inventory Organization.**

Answer: E

Explanation:

To track Overall Equipment Effectiveness (OEE) in real-time, Oracle Manufacturing Cloud can integrate with IoT solutions. The correct setup involves:

* Enabling IoT Production Monitoring and turning on synchronization to IoT Production Monitoring in the Inventory Organization . This allows real-time data from the shop floor to be captured, processed, and used to monitor equipment effectiveness, performance, and availability.

Incorrect options:

* IoT Fleet Monitoring (A) and IoT Asset Monitoring (B, D) focus on tracking assets and fleets, which are more relevant for logistics or asset management, not production monitoring for OEE.

Oracle Cloud documentation on IoT Production Monitoring details how to set up the system to track OEE and integrate production data with IoT capabilities.

NEW QUESTION # 22

.....

Candidates all around the globe use their full potential only to get Oracle 1z0-1075-25 certification. Once the candidate is a Oracle certified, he gets multiple good career opportunities in the Oracle sector. To pass the 1z0-1075-25 Certification Exam a candidate needs to be updated and reliable Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) prep material.

Certification 1z0-1075-25 Sample Questions: https://www.itexamguide.com/1z0-1075-25_braindumps.html

In addition, the online version of our 1z0-1075-25 training materials can work in an offline state, Oracle Latest 1z0-1075-25 Exam Testking Latest training material, freely, If you prefer practicing on the simulated real 1z0-1075-25 test, our second version, the PC version of 1z0-1075-25 pass-sure torrent may be your first choice and it has no limits on numbers of PC but based on Windows only, Besides, score comparison and improvement check is available by Certification 1z0-1075-25 Sample Questions - Oracle
