UiPath Automation Developer Associate v1 Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

Where can you find a list of all the activities that support the Windows compatibility?

- A. In the Activities Guide.
- B. In the Windows-Legacy project configuration.
- C. In the converted project's settings.
- D. In the Official feed documentation.

Answer: A

Explanation:

The Activities Guide is a comprehensive documentation of all the official UiPath activity packages that are available on the Official feed. The Activities Guide provides detailed information about each activity, such as the description, properties, examples, and

compatibility. The compatibility section indicates which target frameworks are supported by the activity, such as Windows, Windows-Legacy, or Cross-platform. By browsing the Activities Guide, you can find a list of all the activities that support the Windows compatibility, as well as the minimum version required for each activity package.

NEW QUESTION # 23

Which two parts are included in an Anchor Base activity?

- A. Anchor and Trigger Scope
- B. Anchor and Sequence
- C. Anchor and Action
- D. Anchor and Condition

Answer: C

Explanation:

The two parts that are included in an Anchor Base activity are Anchor and Action. The Anchor Base activity is a container that searches for a UI element by using other UI elements as anchors. This should be used when a reliable selector is not available. The Anchor Base activity has two sections: Anchor and Action. The Anchor section contains an activity that identifies the anchor element, such as Find Element or Find Image. The Action section contains an activity that performs an action on the target element, such as Click or Type Into. The Anchor Base activity also has a property called AnchorPosition, which specifies the relative position of the target element to the anchor element, such as left, right, top, or bottom. For example, if the Anchor Base activity is used to click on a button that is always to the right of a label, the Anchor section can use the Find Element activity to find the label, the Action section can use the Click activity to click on the button, and the AnchorPosition property can be set to Right.

NEW QUESTION # 24

What is the primary responsibility of an automation business analyst in the Process Analysis phase of automation implementation?

- A. Analyzing the chosen process in its AS-IS state and starting the Process Definition Document (PDD) creation.
- B. Ensuring a proper handover of the compiled documents to the development team.
- C. Defining and finalizing the TO-BE process.
- D. Assisting the clients in the creation of test cases and scenarios.

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The Process Analysis phase is a critical stage where the Automation Business Analyst (ABA) analyzes the current (AS-IS) state of a process and begins documenting it in the Process Definition Document (PDD).

Primary Responsibilities of an Automation Business Analyst in the Process Analysis Phase:

1## Analyze the AS-IS Process

* Understand how the current manual process works.

* Identify bottlenecks and inefficiencies.

* Gather business requirements from stakeholders.

2## Start Creating the Process Definition Document (PDD)

* Document the process flow.

* Identify automation opportunities.

* Define inputs, outputs, and business rules.

3## Work with the Development Team to Validate Feasibility

* Check if the process is technically automatable.

* Identify potential challenges before development begins.

Real-World Use Case: Automating an Invoice Approval Process

Scenario: A company manually processes 1000+ invoices per month, leading to # Delays # Human errors

High processing costs

Automation Business Analyst Steps: 1## Interviews finance employees to document the AS-IS process.

2## Identifies decision points (e.g., manager approvals). 3## Creates a PDD with step-by-step details. 4## Passes the PDD to the

development team for feasibility analysis.

This ensures smooth automation implementation!

Why the other options are incorrect?

B. Ensuring a proper handover of compiled documents to the development team

* Handover happens later, after PDD completion.

C. Defining and finalizing the TO-BE process

* TO-BE process is finalized later, after analyzing AS-IS.

D. Assisting in the creation of test cases

* Test cases are created during development and UAT, not during Process Analysis.

NEW QUESTION # 25

A developer has published a new library from UiPath Studio to the Orchestrator feed. Another developer on the team is connected to the same Orchestrator where the library has been published.

What steps are necessary for adding this library as a dependency in a project?

- A. Open the Manage Packages Window and ensure the Orchestrator feed is enabled. In the Imports Panel in Studio, search for the package by name, and then install the package.
- B. Open the Manage Packages Window and install UiPath.System.Activities. Drag and Drop the Invoke Method activity and input the library name as a parameter.
- **C. Open the Manage Packages Window and ensure the Orchestrator feed is enabled. Search for the package by name in the Search bar and then install the package.**
- D. Open the Manage Packages Window and install UiPath.System.Activities. Drag and Drop the Invoke Com Method activity and input the library name as a parameter.

Answer: C

Explanation:

A library published to Orchestrator is stored in the Orchestrator feed and can be accessed by any connected developer.

Steps to Add the Library as a Dependency in a Project:

* Open "Manage Packages" in UiPath Studio.

* Enable the Orchestrator feed (ensure it is listed in the available package sources).

* Search for the library name in the Search bar.

* Install the library as a dependency.

* Use the activities from the installed library in the workflow.

Why is Option D Correct?

* The Orchestrator feed must be enabled to download the library.

* The library is installed via Manage Packages, not through the Imports Panel.

* No need for Invoke Method or Invoke Com Method activities (these are used for .NET interactions, not library dependencies).

Why Other Options Are Incorrect?

* A (Install UiPath.System.Activities & use Invoke Method) #

* Incorrect. UiPath.System.Activities is unrelated to custom libraries.

* B (Use Imports Panel) #

* Incorrect. Libraries are installed from Manage Packages, not from Imports.

* C (Use Invoke Com Method) #

* Incorrect. Invoke Com Method is not required for adding a library.

NEW QUESTION # 26

Which of the following options is correct about a State Machine layout?

- A. Can have multiple initial states and only one final state.
- **B. Can have only one initial state and multiple final states.**
- C. Can have multiple initial states and multiple final states.

- D. Can have only one initial state and only one final state.

Answer: B

Explanation:

Explanation

A State Machine layout is a type of workflow that allows developers to create complex and dynamic automation processes that can branch based on user input or predefined conditions. A State Machine layout consists of states, transitions, and triggers. A state represents a specific step or action in the process, a transition defines the direction of the flow between states, and a trigger determines when a transition should occur. A State Machine layout can have only one initial state, which is the starting point of the process, and multiple final states, which are the possible end points of the process.
