針對企業競爭形勢的新要求，像 CompTIA 的 CS0-003 一些熱門的專業證照考試誕生了，其中包括ISC、Fortinet、Adobe、EMC、Veritas、GAQM和HP等。在國際上，許多企業已從1995年起安排員工參加了各專業的證照考試。他們的實踐證明，專業的CS0-003 證照不僅提高了員工的技術水準，增強了企業的市場競爭能力，而且更重要的是，這些企業由於在更新員工技能方面所付出的努力以及所表現出的遠見卓識，使PDFExamDumps CS0-003 證照已贏得了企業內外的一致好評。

申請CompTIA Cybersecurity Analyst (CySA+)證書的候選人應至少具有3-4年的實踐經驗，了解網絡概念、操作系統概念和安全概念。已完成CompTIA Security+證書或具有相當經驗的候選人也有資格獲得該證書。

CompTIA Cybersecurity Analyst (CySA+) 認證是一個全球性認證，設計給在網絡安全領域的 IT 專業人員。這是一個中級認證，涵蓋了一系列網絡安全主題，包括威脅管理、漏洞管理、事件反應和合規性評估。這個認證適合想要在網絡安全領域推進職業發展並展示他們在這個領域的技能和知識的專業人士。

最新的 CompTIA Cybersecurity Analyst CS0-003 免費考試真題 (Q522-Q527):

問題 #522
Executives at an organization email sensitive financial information to external business partners when negotiating valuable contracts. To ensure the legal validity of these messages, the cybersecurity team recommends a digital signature be added to emails sent by the executives. Which of the following are the primary goals of this recommendation? (Select two).

- A. Non-repudiation
- B. Confidentiality

- C. Anonymity
- D. Integrity
- E. Authorization
- F. Privacy

答案： A,D

解題說明：
Digital signatures ensure the integrity and non-repudiation of emails. Integrity ensures that the message has not been altered in transit, as the digital signature would be invalidated if the content were tampered with.
Non-repudiation ensures that the sender cannot deny having sent the email, as the digital signature is unique to their identity. These principles are crucial for legal validity, as recommended by CompTIA Security+ standards. Confidentiality (A) and privacy (C) relate to encryption, while authorization (F) and anonymity (D) are unrelated to the primary purpose of digital signatures in this context.

問題 #523
Numerous emails were sent to a company's customer distribution list. The customers reported that the emails contained a suspicious link. The company's SOC determined the links were malicious. Which of the following is the best way to decrease these emails?

- A. SMTP
- B. DMARC
- C. DKIM
- D. SPF

答案： B

解題說明：
DMARC (Domain-based Message Authentication, Reporting, and Conformance) helps organizations prevent email spoofing and phishing by enforcing policies based on SPF and DKIM.
Option B (DKIM - DomainKeys Identified Mail) verifies message integrity but does not enforce policies.
Option C (SPF - Sender Policy Framework) prevents spoofing but is not as comprehensive as DMARC.
Option D (SMTP - Simple Mail Transfer Protocol) is just an email delivery protocol, not a security control.
Thus, A (DMARC) is the correct answer, as it combines SPF and DKIM to prevent spoofing and phishing attacks.

問題 #524
The analyst reviews the following endpoint log entry:
Which of the following has occurred?

- A. New account introduced
- B. Privilege escalation
- C. Registry change
- D. Rename computer

答案： A

解題說明：
The endpoint log entry shows that a new account named "admin" has been created on a Windows system with a local group membership of "Administrators". This indicates that a new account has been introduced on the system with administrative privileges. This could be a sign of malicious activity, such as privilege escalation or backdoor creation, by an attacker who has compromised the system.

問題 #525
A security analyst has prepared a vulnerability scan that contains all of the company's functional subnets.
During the initial scan, users reported that network printers began to print pages that contained unreadable text and icons.
Which of the following should the analyst do to ensure this behavior does not oocur during subsequent vulnerability scans?

- A. Increase the threshold length of the scan timeout.
- B. Ignore embedded web server ports.

- C. Perform non-credentialed scans.
- D. Create a tailored scan for the printer subnet.

答案：D

解題說明：
The best way to prevent network printers from printing pages during a vulnerability scan is to create a tailored scan for the printer subnet that excludes the ports and services that trigger the printing behavior. The other options are not effective for this purpose: performing non-credentialed scans may not reduce the impact on the printers; ignoring embedded web server ports may not cover all the possible ports that cause printing; increasing the threshold length of the scan timeout may not prevent the printing from occurring.
References: According to the CompTIA CySA+ Study Guide: Exam CS0-003, 3rd Edition1, one of the objectives for the exam is to "use appropriate tools and methods to manage, prioritize and respond to attacks and vulnerabilities". The book also covers the usage and syntax of vulnerability scanning tools, such as Nessus, Nmap, and Qualys, in chapter 4. Specifically, it explains the meaning and function of each component in vulnerability scanning, such as credentialed vs. non-credentialed scans, port scanning, and scan scheduling1, pages 149-160. It also discusses the common issues and challenges of vulnerability scanning, such as network disruptions, false positives, and scan scope1, pages 161-162. Therefore, this is a reliable source to verify the answer to the question.

問題 #526
A security analyst observed the following activity from a privileged account:
. Accessing emails and sensitive information
. Audit logs being modified
. Abnormal log-in times
Which of the following best describes the observed activity?

- A. Unauthorized privileges
- B. Irregular peer-to-peer communication
- C. Insider attack
- D. Rogue devices on the network

答案：C

解題說明：
The observed activity from a privileged account indicates an insider attack, which is when a trusted user or employee misuses their access rights to compromise the security of the organization. Accessing emails and sensitive information, modifying audit logs, and logging in at abnormal times are all signs of malicious behavior by a privileged user who may be trying to steal, tamper, or destroy data, or cover their tracks. An insider attack can cause significant damage to the organization's reputation, operations, and compliance12.
