

Efficient JN0-481 Valid Exam Online bring you Marvelous Study JN0-481 Reference for Juniper Data Center, Specialist (JNCIS-DC)

What's more, part of that NewPassLeader JN0-481 dumps now are free: <https://drive.google.com/open?id=1paAllqUOtLopD4ezAO8ecw4GkuS7Vx-X>

Do you feel bored about current jobs and current life? Go and come to obtain a useful certificate! JN0-481 study guide is the best product to help you achieve your goal. If you pass exam and obtain a certification with our JN0-481 study materials, you can apply for satisfied jobs in the large enterprise and run for senior positions with high salary and high benefits. Excellent Juniper JN0-481 Study Guide make candidates have clear studying direction to prepare for your test high efficiently without wasting too much extra time and energy.

Success in the Juniper JN0-481 exam paves the way toward high-paying jobs, promotions, and skills verification. Hundreds of Juniper JN0-481 test takers do not get success because of using Juniper JN0-481 outdated dumps. Due to failure, they lose money, time, and confidence. All these losses can be prevented by using updated and real JN0-481 exam.

Free PDF Quiz 2026 Perfect JN0-481: Data Center, Specialist (JNCIS-DC) Valid Exam Online

In order to facilitate the wide variety of users' needs the JN0-481 study guide have developed three models with the highest application rate in the present - PDF, software and online. Online mode of another name is App of JN0-481 study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the JN0-481 simulating materials of this learning model, such as computer, phone, laptop and so on.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q69-Q74):

NEW QUESTION # 69

Which two statements are correct about the graph query output shown in the exhibit? (Choose two.)

□

- A. The switch in the output is a Juniper device.
- B. The interface has an IP address assigned to it.
- C. The output shows a LAG connection.
- D. The interface has tags assigned to it.

Answer: A,C

Explanation:

The graph query output shown in the exhibit is a JSON representation of an interface node and its properties in the Apstra graph database. Based on the output, we can infer the following statements:

The output shows a LAG connection. This is true because the interface node has a property called `lag_mode` which is set to `lacp_active`, indicating that the interface is part of a link aggregation group (LAG) that uses the Link Aggregation Control Protocol (LACP) to negotiate the link state and parameters.

The switch in the output is a Juniper device. This is true because the interface node has a property called `if_name` which is set to `ae`, indicating that the interface name follows the Juniper naming convention for aggregated Ethernet interfaces.

The interface has an IP address assigned to it. This is false because the interface node has properties called `ipv4_addr` and `ipv6_addr` which are both set to null, indicating that the interface does not have any IPv4 or IPv6 address configured.

The interface has tags assigned to it. This is false because the interface node has a property called `tags` which is set to null, indicating that the interface does not have any tags associated with it.

NEW QUESTION # 70

In the case of IP Clos data center five-stage fabric design, what are two roles of the super spines? (Choose two.)

- A. Super spines are used to connect leaf nodes within a data center pod.
- B. Super spines are always connected to an external data center gateway.
- C. Super spines connect to all spine devices within the five-stage architecture.
- D. Super spines are used to interconnect two different data center pods.

Answer: C,D

Explanation:

In the case of IP Clos data center five-stage fabric design, the super spines are the devices that provide the highest level of aggregation in the network. They have two main roles:

Super spines are used to interconnect two different data center pods. A pod is a cluster of leaf and spine devices that form a 3-stage Clos topology. A 5-stage Clos topology consists of multiple pods that are connected by the super spines. This allows for scaling the network to support more devices and bandwidth.

Super spines connect to all spine devices within the five-stage architecture. The spine devices are the devices that provide the second level of aggregation in the network. They connect to the leaf devices, which are the devices that provide access to the end hosts. The super spines connect to all the spine devices in the network, regardless of which pod they belong to. This provides any-to-any connectivity between the pods and enables optimal routing and load balancing.

NEW QUESTION # 71

When an agent installation is successful, devices are placed into which state using the Juniper Apstra UI?

- A. IS-ACTIVE
- B. OOS-READY
- C. OOS-QUARANTINED
- D. IS-MAINT

Answer: C

Explanation:

When an agent installation is successful, devices are placed into the Out of Service Quarantined (OOS-QUARANTINED) state using the Juniper Apstra UI. This state means that the device is not yet managed by Apstra and has not been assigned to any blueprint. The device configuration at this point is called Pristine Config. To make the device ready for use in a blueprint, you need to acknowledge the device, which changes its state to Out of Service Ready (OOS-READY).

NEW QUESTION # 72

Which of the following two statements are correct?

- A. VXLAN encapsulation discards VLAN IDs
- B. VXLAN encapsulation discards VNIs
- C. VXLAN is a Layer 3 encapsulation protocol
- D. VXLAN is a Layer 2 encapsulation protocol

Answer: A,D

NEW QUESTION # 73

What is the function of the Revert button in the Juniper Apstra UI?

- A. The Revert button will undo the last change made to the configuration.
- B. The Revert button will rollback to the previous configuration of a specified device.
- C. The Revert button performs a rollback 0 on Juniper devices in the fabric.
- D. The Revert button deletes any uncommitted changes within Apstra.

Answer: D

Explanation:

The Revert button is located on the Uncommitted tab of the blueprint page. The Uncommitted tab shows the changes that have been staged but not yet committed to the network. The Revert button allows you to discard any uncommitted changes and revert to the last committed state of the blueprint. This is useful if you want to cancel the changes that you have made or if you want to start over with a fresh slate.

NEW QUESTION # 74

.....

If you use the NewPassLeader Juniper JN0-481 Study Materials, you can reduce the time and economic costs of the exam. It can help you to pass the exam successfully. Before you decide to buy our Juniper JN0-481 exam materials, you can download our free test questions, including the PDF version and the software version. If you need software versions please do not hesitate to obtain a copy from our customer service staff.
