

Original Databricks-Certified-Data-Engineer-Associate Questions | Databricks-Certified-Data-Engineer-Associate Valid Test Test

DOWNLOAD the newest TroytecDumps Databricks-Certified-Data-Engineer-Associate PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=17iX5miLIMat74PLPY5fvdJBcNYsjIs-w>

For your information, the passing rate of our Databricks-Certified-Data-Engineer-Associate study questions is over 98% up to now. Up to now our Databricks-Certified-Data-Engineer-Associate practice materials consist of three versions, all those three basic types are favorites for supporters according to their preference and inclinations. On your way moving towards success, our Databricks-Certified-Data-Engineer-Associate Preparation materials will always serves great support. And you can contact us at any time since we are serving online 24/7.

Databricks Databricks-Certified-Data-Engineer-Associate Exam Syllabus Topics:

Section	Weight	Objectives
Python for Data Engineering	10-15%	- Use PySpark for data processing - Work with Spark APIs in Python - Implement user-defined functions (UDFs)
Apache Spark Data Processing Fundamentals	20-25%	- Use Spark SQL for data processing - Work with structured data types (arrays, maps, structs) - Create and use Spark DataFrames - Apply transformations and actions on DataFrames
Data Pipeline Architecture	15-20%	- Design data pipelines for batch and streaming - Understand ELT vs ETL patterns - Implement incremental data processing - Monitor and optimize pipeline performance
Lakehouse Platform Concepts	10-15%	- Describe key Databricks Lakehouse platform components - Explain data governance and security concepts - Understand the Lakehouse architecture and its benefits
Delta Lake Fundamentals	20-25%	- Write to and read from Delta tables - Understand ACID transactions and time travel - Create and manage Delta tables - Explain Delta Lake features and benefits
Spark SQL and DataFrames	15-20%	- Aggregate and group data - Write and execute Spark SQL queries - Join and union DataFrames - Handle null values and data quality

Databricks-Certified-Data-Engineer-Associate Exam Torrent & Databricks-Certified-Data-Engineer-Associate Test Collection & Databricks-Certified-Data-Engineer-Associate Top Quiz

Here, we provide you with Databricks-Certified-Data-Engineer-Associate accurate questions & answers which will be occurred in the actual test. About explanations, the difficult issues will be along with detail explanations, so that you can easy to get the content of our Databricks Databricks-Certified-Data-Engineer-Associate pdf vce and have a basic knowledge of the key points. Besides, you can choose the Databricks-Certified-Data-Engineer-Associate Vce Format files for simulation test. It can help you enhance your memory and consolidate the knowledge, thus the successful pass is no longer a difficult thing.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q198-Q203):

NEW QUESTION # 198

A data engineer converts an external table to a managed table. A structured streaming job that reads from this table continues running during the conversion. After the conversion completes, the streaming job stops processing new records. How should the data engineer resolve this?

- A. Grant the streaming job additional permissions on the new managed storage location
- B. Run REFRESH TABLE on the converted table to update the streaming checkpoint
- **C. Restart the streaming job, so it picks up the new managed table location**
- D. Delete the streaming checkpoint directory and let the job reprocess from the beginning

Answer: C

Explanation:

Converting the table changes its underlying storage location. Databricks requires affected streaming jobs to be restarted; the stream then resumes from its existing checkpoint and reads from the new managed location. The checkpoint should not be deleted.

NEW QUESTION # 199

A data engineer wants to create a new table containing the names of customers that live in France.

They have written the following command:

```
CREATE TABLE customersInFrance
AS
SELECT id,
       firstName,
       lastName,
FROM customerLocations
WHERE country = 'FRANCE';
```

A senior data engineer mentions that it is organization policy to include a table property indicating that the new table includes personally identifiable information (PII).

Which of the following lines of code fills in the above blank to successfully complete the task?

- **A. COMMENT "Contains PII"**
- B. There is no way to indicate whether a table contains PII.
- C. PII
- D. "COMMENT PII"
- E. TBLPROPERTIES PII

Answer: A

Explanation:

In Databricks, when creating a table, you can add a comment to columns or the entire table to provide more information about the data it contains. In this case, since it's organization policy to indicate that the new table includes personally identifiable information (PII), option D is correct. The line of code would be added after defining the table structure and before closing with a semicolon. References: Data Engineer Associate Exam Guide, CREATE TABLE USING (Databricks SQL)

NEW QUESTION # 200

A data engineer needs to audit who made changes to a Delta table during the last seven days.

Which SQL statement returns the record of past operations, including timestamps, users, and operation types?

- A. SHOW TBLPROPERTIES my_table
- B. SELECT * FROM delta.`my\_table/\_delta\_log`
- C. DESCRIBE HISTORY my_table
- D. DESCRIBE DETAIL my_table

Answer: C

Explanation:

DESCRIBE HISTORY my_table returns the Delta table's operation history. Its result includes information such as the table version, operation timestamp, user identity when available, operation name, parameters, notebook or job details, and associated metrics. The engineer can filter the returned timestamps to analyze operations performed during the last seven days. SHOW TBLPROPERTIES displays configured table properties rather than transactional history. DESCRIBE DETAIL returns the current table metadata and storage characteristics, not a chronological audit of changes. Directly querying the _delta_log path is unnecessary, depends on file-level implementation details, and the displayed path is not the supported SQL statement for this audit requirement. Therefore, option C provides the supported and structured record of past Delta table operations.

NEW QUESTION # 201

A data engineer needs to configure an external location and a storage credential so that a new bronze ingestion pipeline can land data in cloud storage governed by Unity Catalog. The engineer has CREATE TABLE permission on schemas but receives a permission error when attempting to create the external location. Which role is required to unblock this setup, the principle of least privilege?

- A. Grant CREATE EXTERNAL LOCATION on both the metastore and the referenced storage credential so the engineer can define the external location.
- B. Grant ALL PRIVILEGES on the catalog so the engineer can create external locations under its schemas.
- C. Promote the engineer to Workspace Admin so they can manage objects and jobs.
- D. Assign the engineer as Metastore Admin because only Metastore Admins can create external locations.

Answer: A

Explanation:

Creating an external location requires specific privileges on both the metastore and the referenced storage credential, enabling the engineer to define the external location without granting broader administrative permissions, aligning with least privilege.

NEW QUESTION # 202

A data engineer has multiple Unity Catalog-managed Delta tables that require regular maintenance. Currently, the engineer manually schedules OPTIMIZE and VACUUM jobs for each table, adjusting their frequency according to how often each table is queried and updated.

The engineer needs to eliminate this manual maintenance overhead and allow Databricks to determine automatically when and how to run these operations.

Which action should the engineer take?

- A. Enable predictive optimization at the account, catalog, or schema level so Databricks automatically identifies and runs maintenance operations on managed tables.
- B. Set delta.autoOptimize.autoCompact and delta.autoOptimize.optimizeWrite table properties to trigger automatic VACUUM and file compaction.
- C. Enable liquid clustering with CLUSTER BY on each table so it automatically compacts files and removes stale files on a schedule.
- D. Configure Auto Loader with schema evolution enabled so it automatically triggers OPTIMIZE and VACUUM after each

Answer: A
