

# High Quality Associate-Cloud-Engineer Prep Guide Dump is Most Valid Associate-Cloud-Engineer Certification Materials

BTW, DOWNLOAD part of Exam-Killer Associate-Cloud-Engineer dumps from Cloud Storage: <https://drive.google.com/open?id=16HAvKiyPLd8B-vJlSj87FsUleOiqNBBw>

In this age of knowledge competition, we must keep up with the pace of the times, otherwise we will be eliminated. How to improve your ability and how to prove your ability is crucial. The answer is Associate-Cloud-Engineer Certification can help you prove your strength and increase social competitiveness. Although it is not an easy thing for somebody to pass the exam, but our Associate-Cloud-Engineer Exam Torrent can help aggressive people to achieve their goals. This is the reason why we need to recognize the importance of getting the test Associate-Cloud-Engineer certification.

Each of the formats is unique in its own way and helps every Google certification exam applicant prepare according to his style. All of these formats are user-friendly and very helpful to clear the Google Associate-Cloud-Engineer Exam exam on the first try. Google Associate-Cloud-Engineer dumps are packed with multiple benefits that will help you prepare Google Associate-Cloud-Engineer Exam successfully in a short time. In case of new updates, Google Associate-Cloud-Engineer dumps will immediately provide you with up to 1 year of free questions updates. These free updates will save your time in case of Google Associate-Cloud-Engineer Exam real exam changes.

## Associate-Cloud-Engineer Latest Study Questions | Associate-Cloud-Engineer Latest Exam Experience

All these three Associate-Cloud-Engineer exam question formats contain the real, updated, and error-free Associate-Cloud-Engineer exam practice test. These Google Associate-Cloud-Engineer exam questions give you an idea about the final Google Associate-Cloud-Engineer exam questions formats, exam question structures, and best possible answers, and you will also enhance your exam time management skills. Finally, at the end of Google Associate-Cloud-Engineer Exam Practice test you will be ready to pass the final Google Associate-Cloud-Engineer exam easily. Best of luck in Google Associate-Cloud-Engineer exam and professional career!!!

## Google Associate Cloud Engineer Exam Sample Questions (Q266-Q271):

### NEW QUESTION # 266

You have an application that uses Cloud Spanner as a database backend to keep current state information about users. Cloud Bigtable logs all events triggered by users. You export Cloud Spanner data to Cloud Storage during daily backups. One of your analysts asks you to join data from Cloud Spanner and Cloud Bigtable for specific users. You want to complete this ad hoc request as efficiently as possible. What should you do?

- A. Create a dataflow job that copies data from Cloud Bigtable and Cloud Spanner for specific users.
- B. Create a dataflow job that copies data from Cloud Bigtable and Cloud Storage for specific users.
- C. Create a Cloud Dataproc cluster that runs a Spark job to extract data from Cloud Bigtable and Cloud Storage for specific users.
- D. Create two separate BigQuery external tables on Cloud Storage and Cloud Bigtable. Use the BigQuery console to join these tables through user fields, and apply appropriate filters.

**Answer: D**

Explanation:

"The Cloud Spanner to Cloud Storage Text template is a batch pipeline that reads in data from a Cloud Spanner table, optionally transforms the data via a JavaScript User Defined Function (UDF) that you provide, and writes it to Cloud Storage as CSV text files."

<https://cloud.google.com/dataflow/docs/guides/templates/provided-batch#cloudspannertogcstext>

"The Dataflow connector for Cloud Spanner lets you read data from and write data to Cloud Spanner in a Dataflow pipeline"

<https://cloud.google.com/spanner/docs/dataflow-connector>

<https://cloud.google.com/bigquery/external-data-sources>

### NEW QUESTION # 267

You have one GCP account running in your default region and zone and another account running in a non-default region and zone. You want to start a new Compute Engine instance in these two Google Cloud Platform accounts using the command line interface. What should you do?

- A. Create two configurations using `gcloud config configurations create [NAME]`. Run `gcloud config configurations activate [NAME]` to switch between accounts when running the commands to start the Compute Engine instances.
- B. Activate two configurations using `gcloud config configurations activate [NAME]`. Run `gcloud config configurations list` to start the Compute Engine instances.
- C. Activate two configurations using `gcloud config configurations activate [NAME]`. Run `gcloud config list` to start the Compute Engine instances.
- D. Create two configurations using `gcloud config configurations create [NAME]`. Run `gcloud config configurations list` to start the Compute Engine instances.

**Answer: A**

Explanation:

"Run `gcloud config configurations list` to start the Compute Engine instances". How the heck are you expecting to "start" GCE instances doing "configuration list".

Each `gcloud` configuration has a 1 to 1 relationship with the region (if a region is defined). Since we have two different regions, we would need to create two separate configurations using `gcloud config configurations create Ref`

<https://cloud.google.com/sdk/gcloud/reference/config/configurations/create> Secondly, you can activate each configuration independently by running `gcloud config configurations activate [NAME]` Ref:

<https://cloud.google.com/sdk/gcloud/reference/config/configurations/activate> Finally, while each configuration is active, you can run the `gcloud compute instances start [NAME]` command to start the instance in the configurations region.

<https://cloud.google.com/sdk/gcloud/reference/compute/instances/start>

### NEW QUESTION # 268

You've deployed a microservice called `myapp1` to a Google Kubernetes Engine cluster using the YAML file specified below:

You need to refactor this configuration so that the database password is not stored in plain text. You want to follow Google-recommended practices. What should you do?

- A. Store the database password in a file inside a Kubernetes persistent volume, and use a persistent volume claim to mount the volume to the container.
- **B. Store the database password inside a Secret object. Modify the YAML file to populate the DB\_PASSWORD environment variable from the Secret.**
- C. Store the database password inside a ConfigMap object. Modify the YAML file to populate the DB\_PASSWORD environment variable from the ConfigMap.
- D. Store the database password inside the Docker image of the container, not in the YAML file.

**Answer: B**

Explanation:

<https://cloud.google.com/config-connector/docs/how-to/secrets#gcloud>

#### **NEW QUESTION # 269**

You want to deploy a new containerized application into Google Cloud by using a Kubernetes manifest. You want to have full control over the Kubernetes deployment, and at the same time, you want to minimize configuring infrastructure. What should you do?

- A. Deploy the application on Cloud Run.
- B. Deploy the application on GKE Autopilot.
- C. Deploy the application on Cloud Functions.
- **D. Deploy the application on GKE Standard.**

**Answer: D**

#### **NEW QUESTION # 270**

You are developing a new application and are looking for a Jenkins installation to build and deploy your source code. You want to automate the installation as quickly and easily as possible. What should you do?

- A. Create a new Compute Engine instance. Run the Jenkins executable.
- B. Create an instance template with the Jenkins executable. Create a managed instance group with this template.
- C. Create a new Kubernetes Engine cluster. Create a deployment for the Jenkins image.
- **D. Deploy Jenkins through the Google Cloud Marketplace.**

**Answer: D**

Explanation:
