Valid Integration-Architect Exam Experience, Latest Integration-Architect Test Cram

As is known to us, internet will hurt their eyes to see the computer time to read long, the eyes will be tired, over time will be short-sighted. In order to help customers solve the problem, our Salesforce Certified Integration Architect test torrent support the printing of page. We will provide you with three different versions, the PDF version allow you to switch our Integration-Architect study torrent on paper. You just need to download the PDF version of our Integration-Architect Exam Prep, and then you will have the right to switch study materials on paper. We believe it will be more convenient for you to make notes. Our website is very secure and regular platform, you can be assured to download the version of our Integration-Architect study torrent.

Salesforce Certified Integration Architect Sample Questions (Q19-Q24):

NEW QUESTION # 19
Northern Trail Outfitters needs to secure an integration with an external Microsoft Azure API Gateway.
What integration security mechanism should be employed?

- A. Configure mutual server authentication with two-way SSL using CA issued certificates.
- B. Implement Salesforce Shield with Encryption at Rest and generate a tenant secret.
- C. Use an API only user profile and implement use an external identity provider with federated API access.
- D. Configure a connected app with an authorization endpoint of the API gateway and configure OAuth settings.

Answer: D

Explanation:
Explanation
The OAuth protocol is a standard way to authorize access to web resources. By configuring a connected app with an authorization endpoint of the API gateway, Salesforce can obtain an access token from the API gateway and use it to invoke the external API securely. This avoids the need to manage certificates or user credentials for authentication2 References: 1: Data Virtualization Pattern 2: OAuth 2.0 Web Server Authentication Flow

NEW QUESTION # 20
A call center manager uses a custom dashboard to track Case related metrics. The manager wants a component to display the number of closed Cases in real time.
What type of event should be used to meet this requirement?

- A. Platform Event
- B. Change Data Capture Event
- C. Push Topic Event
- D. Generic Event

Answer: C

Explanation:
https://developer.salesforce.com/docs/atlas.en-us.api_streaming.meta/api_streaming/pushtopic_events_intro.htm

NEW QUESTION # 21
A company's cloud-based single page application consolidates data local to the application with data from on premise and 3rd party systems. The diagram below typifies the application's combined use of synchronous and asynchronous calls.
The company wants to use the average response time of its application's user interface as a basis for certain alerts. For this purpose, the following occurs:
1. Log every call's start and finish date and time to a central analytics data store.
2. Compute response time uniformly as the difference between the start and finish date and time - A to H in the diagram.
Which computation represents the end-to-end response time from the user's perspective?

- A. Sum of A to F
- B. Sum of A to H
- C. Sum of A, G, and H
- D. Sum of A and H

Answer: D

NEW QUESTION # 22

An enterprise architect has requested the Salesforce Integration architect to review the following (see diagram & description) and provide recommendations after carefully considering all constraints of the enterprise systems and Salesforce platform limits.

* About 3,000 phone sales agents use a Salesforce Lightning UI concurrently to check eligibility of a customer for a qualifying offer.
* There are multiple eligibility systems that provides this service and are hosted externally. However, their current response times could take up to 90 seconds to process and return (there are discussions to reduce the response times in future, but no commitments are made).
* These eligibility systems can be accessed through APIs orchestrated via ESB (MuleSoft).
* All requests from Salesforce will have to traverse through customer's API Gateway layer and the API Gateway imposes a constraint of timing out requests after 9 seconds.

Which three recommendations should be made?
Choose 3 answers

- A. When responses are received by Mule, create a Platform Event in Salesforce via Remote-Call-In and use the empAPI in the lightning UI to serve 3,000 concurrent users.
- B. Use Continuation callouts to make the eligibility check request from Salesforce from Lightning UI at page load.
- C. Recommend synchronous Apex call-outs from Lightning UI to External Systems via Mule and implement polling on API gateway timeout.
- D. Implement a 'Check Update' button that passes a requestID received from ESB (user action needed).
- E. ESB (Mule) with cache/state management to return a requestID (or) response if available from external system.

Answer: B,D,E

NEW QUESTION # 23

Northern Trail Outfitters needs to use Shield Platform Encryption to encrypt social security numbers in order to meet a business requirement.
Which two considerations should an Integration Architect do prior to the implementation of Shield Platform Encryption?
Choose 2 answers

- A. Encrypt the data using the most current key.
- B. Review shield platform encryption configurations.
- C. Use Shield Platform Encryption as a user authentication or authorization tool.
- D. Encrypt all the data so that it is secure.

Answer: B,D

Explanation:
Explanation
The considerations that an Integration Architect should do prior to the implementation of Shield Platform Encryption are:
Review shield platform encryption configurations.
Encrypt all the data so that it is secure.
Shield Platform Encryption is a feature that allows you to encrypt sensitive data at rest in Salesforce, such as social security numbers, without compromising critical platform functionality. Before implementing Shield Platform Encryption, you should review the shield platform encryption configurations, such as the encryption key management, the encryption policy, and the encrypted fields and files. You should also encrypt all the data that is subject to encryption, not just the data using the most current key. Encrypting all the data ensures that your data is secure and compliant with your business requirements. Encrypting the data using the most current key is not a valid consideration because Shield Platform Encryption uses a deterministic encryption scheme that does not allow you to rotate or re-encrypt your data with a new key. Using Shield Platform Encryption as a user authentication or authorization tool is not a valid consideration because Shield Platform Encryption is not designed for that purpose. Shield Platform Encryption only encrypts data at rest, not in transit or in use.

NEW QUESTION # 24

......

torrent to the demanding of the ever-renewing exam, which will be of great significance for you to keep pace with the times.
