Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q178-Q183):

NEW QUESTION # 178

Which world-writable directory should be placed on a separate partition in order to prevent users from being able to fill up the filesystem? (Specify the full path to the directory.)

- A. /var/tmp/
- **B. /tmp**
- C. /var/tmp/
- D. tmp,
- E. /tmp

Answer: B

Explanation:

The world-writable directory that should be placed on a separate partition in order to prevent users from being able to fill up the filesystem is /tmp. This directory is used by applications and users to store temporary files, and it is world-writable by default. By creating a separate partition for /tmp, the amount of space available to users is limited, and the root filesystem is protected from being filled up by temporary files.

To create a separate partition for /tmp, you can use the fdisk or parted command to create a new partition on the disk. Once the partition is created, you can format it with a filesystem such as ext4, and then mount it to the /tmp directory using the mount command. Finally, you can modify the /etc/fstab file to ensure that the partition is mounted automatically at boot time. Here is an example of the steps to create a separate partition for /tmp:

After completing these steps, the /tmp directory will be mounted on a separate partition, and users will be limited in the amount of space they can use for temporary files.

LFCS: Linux World-Writable Directory Partitioning

NEW QUESTION # 179

Which of the following files, located in a user's home directory, contains the Bash history?

- A. bash_histfile
- B. bashrc_history
- **C. bash_history**
- D. history
- E. history_bash

Answer: C

NEW QUESTION # 180

Which command is used to create and initialize the files used to store quota information? (Specify ONLY the command without any path or parameters.)

Answer:

Explanation:

quotacheck

Explanation

The command that is used to create and initialize the files used to store quota information is quotacheck. This command scans one or more file systems for disk usage, creates, checks, and repairs quota files. The quota files are named aquota.user and aquota.group and are located in the root of the file system.

The quotacheck command should be run before using quotaon to enable disk quotas.

NEW QUESTION # 181

Which of the following vi commands deletes two lines, the current and the following line?

- A. 2d
- B. de12
- C. 2dd
- D. d2
- E. dd2

Answer: C

Explanation:

The correct answer is C, 2dd. This command will delete two lines, the current and the following line, in vi editor. The syntax of the command is:

[number]dd

The number specifies how many lines to delete, starting from the current line. The dd command deletes the lines and puts them in a buffer, which can be pasted later with the p command. If no number is given, the command will delete only the current line.

The other commands are incorrect for the following reasons:

* A, d2: This command will delete two characters, not two lines. The syntax of the command is:

d[motion]

The motion specifies how many characters to delete, starting from the current cursor position. The 2 motion means two characters to the right. The d command deletes the characters and puts them in a buffer, which can be pasted later with the p command.

* B, 2d: This command is incomplete and will not work. The d command requires a motion argument to specify how many characters to delete. The 2 argument is only a number, not a motion. The command will wait for another keystroke to complete the motion.

* D, dd2: This command will delete the current line and then move the cursor two lines down. The syntax of the command is:

dd[number]

The dd command deletes the current line and puts it in a buffer, which can be pasted later with the p command. The number specifies how many lines to move the cursor down, after deleting the current line. If no number is given, the command will move the cursor to the next line.

* E, de12: This command will delete from the current cursor position to the end of the word, and then move the cursor to the 12th line. The syntax of the command is:

d[motion][number]

The d command deletes the characters specified by the motion and puts them in a buffer, which can be pasted later with the p command. The e motion means the end of the word. The number specifies the line number to move the cursor to, after deleting the characters.
