## Salesforce Certified Field Service Consultant Sample Questions (Q57-Q62):

### NEW QUESTION # 57

Universal Containers (UC) wants to deploy knowledge to its field team. How should UC ensure its technicians can access knowledge articles offline?

- **A. Use work types to assign associated articles to work order.**
- B. Create a custom Mobile App that syncs articles based on service appointment assignments.
- C. Use the Salesforce Mobile App with deep linking to the field service lightning Mobile App.
- D. Write a workflow that associates articles to work orders based on a picklist on the work order.

**Answer: A**

Explanation:  
Explanation

Work types can be used to assign associated articles to work orders, which can be accessed offline by technicians using the Field Service Mobile App. The Salesforce Mobile App does not have deep linking to the Field Service Mobile App. Creating a custom Mobile App that syncs articles based on service appointment assignments is not necessary and would require additional development and maintenance. Writing a workflow that associates articles to work orders based on a picklist on the work order is not recommended and would not ensure offline access. ### NEW QUESTION # 58

An extreme weather situation impacted both the volume of open work and the number of available resources at Universal Containers.

Which approach should a Consultant recommend to realign available resources with open work?

- **A. Global optimization**
- B. Emergency scheduling
- C. Customer First scheduling
- D. Resource Schedule Optimization

**Answer: A**

Explanation:

Global optimization is a feature that allows rescheduling multiple service appointments at once based on predefined criteria such as emergency priority, travel time, or skills[194]. Global optimization would allow Universal Containers to realign available resources with open work by running an optimization job that prioritizes emergency work and assigns it to the best available resources[195]. Resource Schedule Optimization is a feature that allows scheduling service appointments for individual resources based on their availability and preferences[196]. Resource Schedule Optimization would not allow Universal Containers to realign available resources with open work because it does not consider multiple resources or service appointments at once. Emergency scheduling is a feature that allows creating and assigning emergency service appointments to the best available resources[197]. Emergency scheduling would not allow Universal Containers to realign available resources with open work because it does not reschedule existing service appointments. Customer First scheduling is a feature that allows prioritizing customer preferences and satisfaction when scheduling service appointments[198]. Customer First scheduling would not allow Universal Containers to realign available resources with open work because it does not prioritize emergency work or reschedule existing service appointments.
