The information technology market has become very competitive. Amazon AWS-Solutions-Architect-Professional technologies and services are constantly evolving. Therefore, the Amazon AWS-Solutions-Architect-Professional certification has become very important to advance one's career. Success in the AWS Certified Solutions Architect - Professional AWS-Solutions-Architect-Professional exam validates and upgrades your skills in Amazon AWS-Solutions-Architect-Professional technologies. It is the main reason behind the popularity of the Amazon AWS-Solutions-Architect-Professional certification exam. You must put all your efforts to clear the challenging Amazon AWS-Solutions-Architect-Professional examination. However, cracking the AWS-Solutions-Architect-Professional test is not an easy task.

The AWS-Solutions-Architect-Professional Exam consists of multiple-choice and multiple-answer questions, which are designed to test candidates' knowledge and skills in various areas of AWS architecture. AWS-Solutions-Architect-Professional exam is available in English, Japanese, Korean, and Simplified Chinese, and can be taken at any Pearson VUE testing center around the world. Candidates who pass the exam will receive the AWS Certified Solutions Architect - Professional certification, which is recognized by employers and IT professionals worldwide as a mark of excellence in AWS architecture.

## Use Real Amazon AWS-Solutions-Architect-Professional PDF Questions [2026] - 100% Guaranteed Success

Our AWS-Solutions-Architect-Professional test material is known for their good performance and massive learning resources. In general, users pay great attention to product performance. After a long period of development, our AWS-Solutions-Architect-Professional research materials have a lot of innovation. We can guarantee that users will be able to operate flexibly, and we also take the feedback of users who use the AWS Certified Solutions Architect - Professional exam dumps seriously. Once our researchers find that these recommendations are possible to implement, we will try to refine the details of the AWS-Solutions-Architect-Professional Quiz guide. Our AWS-Solutions-Architect-Professional quiz guide has been seeking innovation and continuous development.

## Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q83-Q88):

### NEW QUESTION # 83

A user has created a VPC with public and private subnets. The VPC has CIDR 20.0.0.0/16. The private subnet uses CIDR 20.0.1.0/24 and the public subnet uses CIDR 20.0.0.0/24. The user is planning to host a web server in the public subnet (port 80) and a DB server in the private subnet (port 3306). The user is configuring a security group of the NAT instance. Which of the below

mentioned entries is not required in NAT's security group for the database servers to connect to the Internet for software updates ?

- **A. For Inbound allow Source: 20.0.0.0/24 on port 80**
- B. For Outbound allow Destination: 0.0.0.0/0 on port 443
- C. For Outbound allow Destination: 0.0.0.0/0 on port 80
- D. For Inbound allow Source: 20.0.1.0/24 on port 80

**Answer: A**

Explanation:

A user can create a subnet with VPC and launch instances inside that subnet. If the user has created a public private subnet to host the web server and DB server respectively, the user should configure that the instances in the private subnet can connect to the internet using the NAT instances. The user should first configure that NAT can receive traffic on ports 80 and 443 from the private subnet. Thus, allow ports 80 and 443 in Inbound for the private subnet

20.0.1.0/24. Now to route this traffic to the internet configure ports 80 and 443 in Outbound with destination 0.0.0.0/0. The NAT should not have an entry for the public subnet CIDR.

#### **NEW QUESTION # 84**

A fleet of Amazon ECS instances is used to poll an Amazon SQS queue and update items in an Amazon DynamoDB database. Items in the table are not being updated, and the SQS queue is filling up. Amazon CloudWatch Logs are showing consistent 400 errors when attempting to update the table. The provisioned write capacity units are appropriately configured, and no throttling is occurring. What is the LIKELY cause of the failure\*?

- A. The ECS instance task execution IAM role was modified
- **B. The ECS task role was modified**
- C. The ECS configuration does not contain an Auto Scaling group
- D. The ECS service was deleted

**Answer: B**

#### **NEW QUESTION # 85**

Which system is used by Amazon Machine Images paravirtual (PV) virtualization during the boot process?

- **A. PV-GRUB**
- B. PV-AMI
- C. PV-WORM
- D. PV-BOOT

**Answer: A**

Explanation:

Amazon Machine Images that use paravirtual (PV) virtualization use a system called PV-GRUB during the boot process. PV-GRUB is a paravirtual boot loader that runs a patched version of GNU GRUB 0.97. When you start an instance, PV-GRUB starts the boot process and then chain loads the kernel specified by your image's menu.lst file.

#### **NEW QUESTION # 86**

A company is migrating to the cloud. It wants to evaluate the configurations of virtual machines in its existing data center environment to ensure that it can size new Amazon EC2 instances accurately. The company wants to collect metrics, such as CPU, memory, and disk utilization, and it needs an inventory of what processes are running on each instance. The company would also like to monitor network connections to map communications between servers.

Which would enable the collection of this data MOST cost effectively?

- A. Configure the Amazon CloudWatch agent on all servers within the local environment and publish metrics to Amazon CloudWatch Logs.
- **B. Enable AWS Application Discovery Service in the AWS Management Console and configure the corporate firewall to allow scans over a VPN.**

- C. Use AWS Application Discovery Service and enable agentless discovery in the existing virtualization environment.
- D. Use AWS Application Discovery Service and deploy the data collection agent to each virtual machine in the data center.

**Answer: D**

### NEW QUESTION # 87

A company is running a batch analysis every hour on their main transactional DB, running on an RDS MySQL instance, to populate their central Data Warehouse running on Redshift. During the execution of the batch, their transactional applications are very slow. When the batch completes they need to update the top management dashboard with the new data. The dashboard is produced by another system running on-premises that is currently started when a manually-sent email notifies that an update is required. The on-premises system cannot be modified because it is managed by another team. How would you optimize this scenario to solve performance issues and automate the process as much as possible?

- A. Create an RDS Read Replica for the batch analysis and SNS to notify the on-premises system to update the dashboard
- B. Replace RDS with Redshift for the batch analysis and SNS to notify the on-premises system to update the dashboard
- C. Replace RDS with Redshift for the batch analysis and SQS to send a message to the on-premises system to update the dashboard
- D. Create an RDS Read Replica for the batch analysis and SQS to send a message to the on-premises system to update the dashboard.

**Answer: B**

### NEW QUESTION # 88

.....

Have you ever noticed that people who prepare themselves for Amazon AWS-Solutions-Architect-Professional certification exam do not need to negotiate their salaries for a higher level, they just get it after they are Amazon AWS-Solutions-Architect-Professional Certified? The reason behind this fact is that they are considered the most deserving candidates for that particular job.
