AVIXA Certified Technology Specialist Sample Questions (Q171-Q176):

NEW QUESTION # 171

When responding to a potential client who quotes online pricing of a display from a retail store as a benchmark for expected pricing, how can the technician BEST counter their point?

- A. Explain the added value of having a professional installer take ownership over the entire solution.
- B. **Explain the value of commercial displays and how they differ from residential displays.**
- C. Offer to install the Owner Furnished display and have them purchase from the retail store.
- D. Explain the difference between commissions for a retail store and commissions for the integrator.

Answer: B

Explanation:

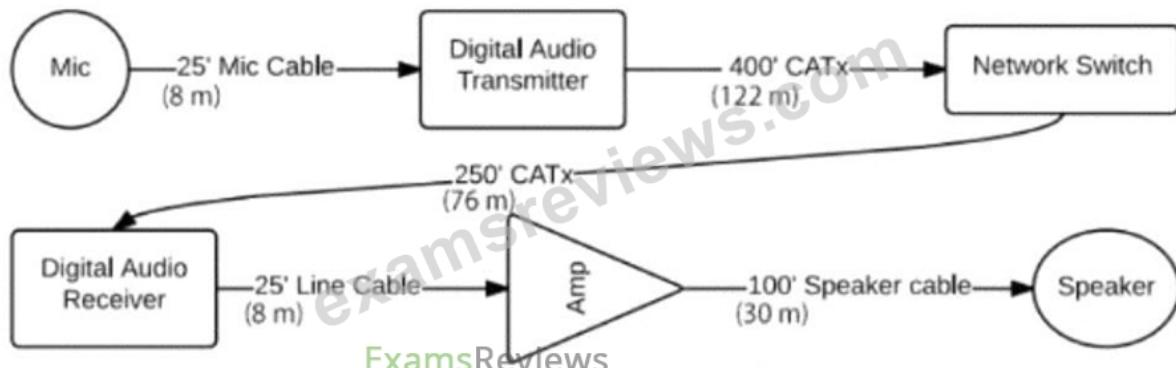

Commercial displays are built for longer operational hours, higher durability, and usually have features like extended warranties and service agreements that are not typically available with consumer-grade displays.

Explaining these distinctions helps clients understand why professional AV solutions are priced differently than retail options.

CTS Technology Specialist Reference According to CTS materials, technicians should be prepared to explain the value and benefits of commercial-grade equipment to justify cost differences.

NEW QUESTION # 172

After installation, the system does not pass audio. Based on the information in the drawing, what is the MOST LIKELY cause?

- A. system needs a DSP
- B. **phantom power is required**
- C. speaker requires a 70 V transformer
- D. cable lengths

Answer: B

Explanation:

The microphone in the setup may require phantom power to operate. Phantom power is a DC voltage (usually 48V) supplied through the microphone cable to power condenser microphones. Without phantom power, a condenser microphone will not function, resulting in no audio being passed through the system. Since the drawing shows a microphone connected to a digital audio transmitter, it's likely a condenser microphone, and if it isn't receiving phantom power, this would be the most probable cause of the system not passing audio.

NEW QUESTION # 173

A task cannot begin before another task is completed. How is this described in a project task schedule?

- A. determination
- B. requirement
- C. consequence
- D. dependency

Answer: D

Explanation:

A dependency in a project task schedule describes a situation where a task cannot begin before another task is completed.

Dependencies ensure that tasks are performed in the correct order to maintain the workflow and project timeline. Axis Technology Specialist documentation highlights the importance of identifying and managing dependencies to ensure smooth project execution and avoid delays.

NEW QUESTION # 174

What is the standard impedance of a DMX cable?

- A. 110 Q
- B. 150 Q
- C. 75 Q
- D. 55 Q

Answer: A

Explanation:

The standard impedance for a DMX (Digital Multiplex) cable is 110 ohms (Ω). DMX is a standard for digital communication networks commonly used to control stage lighting and effects. The 110-ohm impedance is crucial for ensuring the integrity and reliability of the digital signal over long distances. Using cables with the correct impedance prevents signal reflections and ensures proper transmission of the DMX data without errors, maintaining the synchronization and performance of lighting systems.

NEW QUESTION # 175

The color of a light wave is determined by the

- A. ambient temperature.
- B. frequency.
- C. polarization.
- D. amplitude.

Answer: B

Explanation:

The color of a light wave is determined by its frequency. Different frequencies of light waves correspond to different colors in the visible spectrum. For instance, higher frequencies correspond to blue/violet light, while lower frequencies correspond to red light. Axis Technology Specialist documentation includes explanations of light properties, emphasizing the relationship between frequency and color to ensure proper selection and use of lighting in AV installations.
