ACA-100 Übungsmaterialien & ACA-100 Lernführung: Appian Certified Analyst & ACA-100 Lernguide

Wollen Sie Appian ACA-100 Zerifizierungsprüfung ablegen? Wollen Sie die Appian ACA-100 Zertifizierung bekommen? Wie können Sie ohne sehr gute Vorbereitung diese Prüfung ablegen? Tatsächlich gibt es eine Weise für Sie, in sehr beschränkter Zeit die Appian ACA-100 Prüfung leicht zu bestehen. Was können Sie machen? Es ist erreichbar, dass Sie die Appian ACA-100 Dumps von It-Pruefung benutzen.

Appian Certified Analyst ACA-100 Prüfungsfragen mit Lösungen (Q30-Q35):

30. Frage

You are translating a user requirement into a user story and need to ensure that the desired functionality will be delivered as expected.

What needs to be written into the user story to ensure it will meet the requirement?

- A. Business value
- B. Test Script
- C. Acceptance criteria
- D. Estimation of effort to develop

Antwort: C

Begründung:

When translating a user requirement into a user story, it is essential to include acceptance criteria to ensure that the desired functionality will be delivered as expected. Acceptance criteria provide clear, testable conditions that define when a user story is complete and meets the requirement. This ensures that the development team has a clear understanding of what needs to be built and how it will be validated, reducing the risk of miscommunication and ensuring the final product aligns with the user's needs. Appian Documentation - Writing Effective User Stories Note: While business value (B) and estimation of effort (A) are important elements of a user story, they do not directly ensure that the functionality will meet the requirement. The test script (C) is typically created after

the user story is developed.

31. Frage

Which Appian component would you use to display a large amount of data in a user-friendly, interactive way?

- A. Milestone Component
- **B. Record Grid Component**
- C. Pie Chart Component
- D. Dropdown Component

Antwort: B

32. Frage

A given user story has a description and an acceptance criterion.
Which two other things are needed to mark the story as ready?

- **A. Priority**
- B. Sprint number
- C. Developer assignment
- **D. Estimation**

Antwort: A,D

33. Frage

Consider the below use case:

A third-party system needs to push information to Appian in real-time.

The information is processed in Appian and a case ID is returned.

The third-party system displays the reference case ID on the confirmation screen.

Which integration approach is most suitable?

- A. Use message queues
- B. Use an integration object
- C. Use FTP/SFTP
- **D. Use a web API-based integration**

Antwort: D

Begründung:

The most suitable integration approach for the given use case is web API-based integration (A). Web APIs allow real-time communication between the third-party system and Appian. The third-party system can send information to Appian through an HTTP request, which Appian processes, and then returns the case ID in the response. This real-time, synchronous interaction is ideal for scenarios where immediate feedback, like displaying a case ID on a confirmation screen, is required. Appian Documentation - Web APIs Note: The other options-FTP/SFTP (B), integration objects (C), and message queues (D)-are not as suitable for real-time, synchronous interactions. FTP/SFTP is typically used for batch processing, integration objects facilitate interactions within Appian, and message queues are better suited for asynchronous processing.

34. Frage

During a development sprint, a new issue is identified and raised to the team.
What should you ask the Product Owner to do?

- **A. Evaluate the severity of the issue and re-prioritize the sprint if needed**
- B. Add the new issue in the next sprint
- C. Add the new issue to the current sprint scope
- D. Modify the sprint plan to swap a completed story with the new issue

Antwort: A
