## Exam Adobe AD0-E725 Consultant, AD0-E725 Cheap Dumps

Adobe Certification exams are essential to move ahead, because being certified professional a well-off career would be in your hand. Adobe is among one of the strong certification provider, who provides massively rewarding pathways with a plenty of work opportunities to you and around the world. But the mystery is quite challenging to pass AD0-E725 exam unless you have an updated exam material. Thousands of people attempt AD0-E725 Exam but majorly fails despite of having good professional experience, because only practice and knowledge isn't enough a person needs to go through the exam material designed by Adobe, otherwise there is no escape out of reading. Well, you have landed at the right place; ValidBraindumps offers your experts designed material which will gauge your understanding of various topics.

## Adobe Commerce Developer Expert Sample Questions (Q10-Q15):

### NEW QUESTION # 10

In an Adobe Commerce store, there is a product attribute called `external_service_id`. A Developer must ensure the attribute is only available for specific users via the API.

How should the Developer achieve the required permissions?

- A. Configure the access control list (ACL) resource for the `external_service_id` attribute via etc `/extension_attributes.xml`.
- B. Implement an afterGet plugin and exclude the attribute for non-authorized users.
- C. Setup a custom permission control at the attribute level because it is not supported out of the box.

Answer: C

### NEW QUESTION # 11

An Adobe Commerce Expert is tasked with implementing a custom condition on salable quantity with reservations. The condition needs to be applicable only when added to cart.

Which option should the Developer implement?

- A. 

```
<virtualType name="IsProductSalableForRequestedQtyConditionChainOnAddToCart">
  <arguments>
    <argument name="conditions" xsi:type="array">
      <item name="is_salable_with_reservations" xsi:type="array">
        <item name="object" xsi:type="object"
          >Vendor\InventorySales\Mode\IsProductSalableForRequestedQtyCondition\IsSalableWithReservationsC
        /item>
      </item>
    </argument>
  </arguments>
```

</virtualType>

- B. <preference for="Magento\InventorySales\Model\ProductSalableForRequestedQtyCondition\IsSalableWithReservationsC type="Vendor\InventorySales\Model\ProductSalableForRequestedQtyCondition\IsSalableWithReservationsCo />
- C. <type name="Magento\InventoryApi\Model\Stock\ValidatorChain">  
<arguments>  
<argument name="validators" xsi:type="array">  
<item name="is\_salable\_with\_reservations" xsi:type="object">  
>Vendor\InventorySales\Model\Stock\Validator\IsSalableWithReservationsValidator</item>  
</argument>  
</arguments>  
</type>

**Answer: A**

Explanation:

To add a custom salable quantity condition for use only during the add-to-cart flow, developers must extend the IsProductSalableForRequestedQtyConditionChainOnAddToCart virtual type. This chain is designed specifically for cart validation, ensuring the new condition runs only at that stage.

A would override the core class completely, not scoped to add-to-cart.

B relates to stock validator chains, not salable quantity conditions.

C is correct: defining a virtual type extension ensures proper conditional logic for reservations during cart validation.

Adobe Commerce DevDocs - MSI salable quantity conditions

## NEW QUESTION # 12

A Developer working on a Magento 2 store needs to modify the Content Security Policy (CSP) to allow loading of images from a trusted external domain while maintaining strict policies for other resources. To accomplish this, the csp\_whitelist.xml file must be updated.

Which code snippet should the Developer use to update the CSP configuration?

- A. XML  
<csp>  
<policies>  
<policy id="media-src">  
<values>  
<value id="trusted\_image" type="host">website.com</value>  
</values>  
</policy>  
</policies>  
</csp>
- B. XML  
<policies>  
<policy id="img-src">  
<values>  
<value id="trusted\_image" type="host">website.com</value>  
</values>  
</policy>  
</policies>
- C. XML  
<policies>  
<policy id="default-src">  
<values>  
<value id="trusted\_image" type="host">website.com</value>  
</values>  
</policy>  
</policies>

**Answer: B**

### NEW QUESTION # 13

In an Adobe Commerce store, there is a product attribute called `external_service_id`. A Developer must ensure the attribute is only available for specific users via the API.

How should the Developer achieve the required permissions?

- A. Configure the access control list (ACL) resource for the `external_service_id` attribute via `etc/extension_attributes.xml`.
- B. Implement an `afterGet` plugin and exclude the attribute for non-authorized users.
- C. Setup a custom permission control at the attribute level because it is not supported out of the box.

**Answer: C**

Explanation:

Out of the box, Adobe Commerce does not support per-attribute ACL permissions. ACL resources can restrict access to API endpoints or modules, but not individual product attributes.

Therefore, to restrict access to a specific attribute like `external_service_id`, the developer must implement custom permission control logic.

A is incorrect: ACL works at module/controller/service contract level, not per attribute.

C (plugin) could work but is not the correct principle-driven answer, as it is a workaround rather than attribute-level permission management.

Reference:

Adobe Commerce DevDocs - API ACL and permissions

Official note: Attribute-level ACL is not supported natively and requires custom implementation.

### NEW QUESTION # 14

An Adobe Commerce Developer is tasked to frequently send data to a third-party API. The API utilizes a JSON Web Token (JWT) that expires every hour. The developer decides to store the JWT in a custom cache.

Which step should the Developer take to implement this new custom cache type correctly?

- A. Define the custom cache type directly in `system.xml` at the website level.
- B. Define the custom cache type in `cache.xml` with a unique name and instance.
- C. Define the custom cache type in the `di.xml`, ensuring the cache model implements `CacheInterface`.

**Answer: B**

Explanation:

To create a custom cache type in Adobe Commerce:

Define the cache type in `etc/cache.xml` with a unique ID and class instance.

This ensures Magento recognizes the cache type and allows managing it with cache commands.

Option A is incorrect; DI configuration is not where cache types are defined.

Option C is wrong; `system.xml` defines admin configurations, not cache types.
