

SOA-C02 Exam Materials and SOA-C02 Test Braindumps - SOA-C02 Dumps Torrent - TestPassKing

P.S. Free 2026 Amazon SOA-C02 dumps are available on Google Drive shared by TestPassKing: <https://drive.google.com/open?id=1M3ZF5G8zs8bYLT4xREwZj7e4xIWAtO9>

Candidates are looking for valid SOA-C02 questions which belong to SOA-C02 urgently. If you need valid exam questions and answers, our high quality is standing out. We are confident that our SOA-C02 training online materials and services are competitive. Every year we spend much money and labor relationship on remaining competitive. We are trying to offer the best high passing-rate SOA-C02 Training Online materials with low price. Our exam materials will help you pass exam one shot without any doubt.

Amazon SOA-C02 (AWS Certified SysOps Administrator - Associate) certification exam is a valuable credential for professionals who work with AWS services. It validates their knowledge and skills, and demonstrates their commitment to excellence in the field. With the growing demand for cloud-based solutions, this certification can open up new career opportunities and help individuals stay competitive in the job market.

SOA-C02 actual study guide & SOA-C02 training torrent prep

The SOA-C02 would assist applicants in preparing for the Amazon SOA-C02 exam successfully in one go SOA-C02 would provide SOA-C02 candidates with accurate and real AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) Dumps which are necessary to clear the SOA-C02 test quickly. Students will feel at ease since the content they are provided with is organized rather than dispersed.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q194-Q199):

NEW QUESTION # 194

A company has a workload that is sending log data to Amazon CloudWatch Logs. One of the fields includes a measure of application latency. A SysOps administrator needs to monitor the p90 statistic of this field over time.

- A. Create a metric filter on the log data.
- B. Create an Amazon CloudWatch Contributor Insights rule on the log data.
- C. Create an Amazon CloudWatch Application Insights rule for the workload.
- D. Create a subscription filter on the log data.

Answer: A

Explanation:

To monitor the p90 (90th percentile) statistic of a specific field in log data over time, the appropriate approach is to create a metric filter on the log data. Metric filters in Amazon CloudWatch Logs allow you to extract metric data from log events and transform them into CloudWatch metrics. These metrics can then be visualized and analyzed over time.

Starting from May 23, 2019, CloudWatch Logs introduced support for percentiles in metric filters. This enhancement enables users to specify percentile statistics, such as p90, p95, p99, etc., when defining metric filters. By doing so, you can gain insights into the distribution of your metric data, which is particularly useful for understanding outliers or unusual behaviors in metrics like application latency.

Once the metric filter is set up to extract the desired field (e.g., application latency) and compute the p90 statistic, you can visualize this metric in CloudWatch Dashboards or set up alarms based on threshold values.

Reference:

CloudWatch Logs adds support for percentiles in metric filters (AWS What's New, May 23, 2019)

NEW QUESTION # 195

A company is hosting a public website on Amazon EC2 instances behind an Application Load Balancer (ALB). The company needs the website to support HTTPS connections.

Which solution will meet this requirement?

- A. Replace the ALB with a Network Load Balancer.
- B. Use AWS Certificate Manager (ACM) to issue a public SSL/TLS certificate. Configure the ALB to use the certificate.
- C. Attach a public SSL/TLS certificate to the target group that is associated with the ALB.
- D. Import a public SSL/TLS certificate into AWS Key Management Service (AWS KMS). Configure the ALB to retrieve the certificate from AWS KMS.

Answer: B

Explanation:

To enable HTTPS connections on a website hosted behind an Application Load Balancer (ALB), you need to:

1. Use AWS Certificate Manager (ACM) to issue a public SSL/TLS certificate.
2. Associate the SSL/TLS certificate with the ALB by configuring a listener on port 443 (HTTPS).
3. The ALB will terminate SSL/TLS connections and forward the traffic to the backend EC2 instances over HTTP or HTTPS as required.

NEW QUESTION # 196

A company has created an AWS CloudFormation template that consists of the AWS: EC2 Instance resource and a custom CloudFormation resource. The custom CloudFormation resource is an AWS Lambda function that attempts to run automation on the Amazon EC2 instance.

During testing, the Lambda function fails because the Lambda function tries to run before the EC2 instance is launched. Which solution will resolve this issue?

- A. Update the custom resource's service token to point to a valid Lambda function.
- B. Update the Lambda function to use the cfn-response module to send a response to the custom resource.
- C. Add a DependsOn attribute to the custom resource. Specify the EC2 instance in the DependsOn attribute.
- D. Use the Fn::if intrinsic function to check for the EC2 instance before the custom resource runs.

Answer: C

Explanation:

DependsOn Attribute in CloudFormation:

The DependsOn attribute in AWS CloudFormation ensures that one resource is created only after another resource has been successfully created. In this case, it ensures that the EC2 instance is fully launched before the custom resource (the Lambda function) is executed.

Steps:

Update the CloudFormation template to include the DependsOn attribute for the custom resource.

Ensure that the custom resource references the EC2 instance.

Resources:

MyEC2Instance:

Type: AWS::EC2::Instance

Properties:

EC2 properties

MyCustomResource:

Type: Custom::MyCustomResource

DependsOn: MyEC2Instance

Properties:

ServiceToken: !GetAtt MyLambdaFunction.Arn

Other properties

NEW QUESTION # 197

A SysOps administrator is responsible for a legacy, CPU-heavy application. The application can only be scaled vertically. Currently, the application is deployed on a single t2.large Amazon EC2 instance. The system is showing 90% CPU usage and significant performance latency after a few minutes.

What change should be made to alleviate the performance problem?

- **A. Upgrade to a compute-optimized instance.**
- B. Change the Amazon EBS volume to Provisioned IOPs.
- C. Purchase Reserved Instances
- D. Add additional t2.large instances to the application.

Answer: A

NEW QUESTION # 198

A company is using Amazon Elastic Container Service (Amazon ECS) to run a containerized application on Amazon EC2 instances.

A SysOps administrator needs to monitor only traffic flows between the ECS tasks.

Which combination of steps should the SysOps administrator take to meet this requirement? (Select TWO.)

- **A. Specify the host network mode in the task definition.**
- B. Specify the bridge network mode in the task definition.
- C. Configure VPC Flow Logs on the elastic network interface of each task.
- D. Specify the awsvpc network mode in the task definition.
- **E. Configure Amazon CloudWatch Logs on the elastic network interface of each task.**

Answer: A,E

NEW QUESTION # 199

.....

During your transitional phase to the ultimate aim, our SOA-C02 study engine as well as these updates is referential. Those SOA-C02 training materials can secede you from tremendous materials with least time and quickest pace based on your own drive and practice to win. Those updates of our SOA-C02 Exam Questions will be sent to you accordingly for one year freely. And we make sure that you can pass the exam.
