

Pass Guaranteed Quiz Perfect Mule-Dev-202 - Valid Salesforce Certified MuleSoft Hyperautomation Developer Guide Files

BONUS!!! Download part of ActualCollection Mule-Dev-202 dumps for free: <https://drive.google.com/open?id=1dBAyYaocGwcQZMyn7dFHQt3xaBeXCffid>

We are in a constant state of learning new knowledge, but also a process of constantly forgotten, we always learned then forget, how to solve this problem, the answer is to have a good memory method, our Mule-Dev-202 exam question will do well on this point. Our Mule-Dev-202 real exam materials have their own unique learning method, abandon the traditional rote learning, adopt diversified memory patterns, such as the combination of text and graphics memory method, to distinguish between the memory of knowledge. Our Mule-Dev-202 learning reference files are so scientific and reasonable that you can buy them safely.

We have the free demo for Mule-Dev-202 Training Materials, and you can practice the free demo in our website, and you will know the mode of the complete version. All versions for the Mule-Dev-202 training materials have free demo. If you want the complete version for Mule-Dev-202 exam dumps, you just need to add it to your shopping cart, and pay for it, you will get the downloading link and the password in ten minutes. If any problem in this process, you can tell us the detailed information, our service staff will solve the problem for you.

Get Professional Valid Mule-Dev-202 Guide Files and Pass Exam in First Attempt

On one hand, we adopt a reasonable price for you, ensures people whoever is rich or poor would have the equal access to buy our useful Mule-Dev-202 real study dumps. On the other hand, we provide you the responsible 24/7 service. Our candidates might meet so problems during purchasing and using our Mule-Dev-202 prep guide, you can contact with us through the email, and we will give you respond and solution as quick as possible. With the commitment of helping candidates to Pass Mule-Dev-202 Exam, we have won wide approvals by our clients. We always take our candidates' benefits as the priority, so you can trust us without any hesitation.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q42-Q47):

NEW QUESTION # 42

Northern Trail Outfitters is developing an API that connects to a vendor's database.

Which two strategies should their Ops team use to monitor the overall health of the API and database using API Functional Monitoring? (Choose two.)

- A. Monitor the Mule worker logs for "ERROR" statements and verify that the results match expected errors.
- B. Make a call to a health-check endpoint, and then verify that the endpoint is still running.

- C. Monitor the CloudHub worker logs for JDBC database connection exceptions.
- D. Make a GET call to an existing API endpoint, and then verify that the results match expected data.

Answer: B,D

Explanation:

Health-Check Endpoint: Creating and regularly calling a health-check endpoint is a common strategy to ensure that the API and its underlying systems are operational. This endpoint typically performs basic checks such as database connectivity and service availability.

Reference: Health Check Pattern

GET Call to Existing Endpoint: Making a GET call to an existing API endpoint and verifying that the results match expected data helps ensure that the API is not only running but also functioning correctly. This approach validates that the API can retrieve data from the database as intended.

Reference: API Monitoring Best Practices

Monitoring CloudHub Worker Logs: While monitoring logs can be useful, it is more of a reactive approach.

Proactive strategies like health-check endpoints and GET calls provide immediate validation of the API's operational status.

Reference: CloudHub Monitoring

Verifying Mule Worker Logs for Errors: This approach can complement health-check endpoints and GET calls but should not be the primary strategy. Logs are helpful for diagnosing issues after they occur rather than ensuring ongoing health.

Reference: Error Handling and Logging

NEW QUESTION # 43

AnyAirlines releases a new REST API that exposes access to an RPA process. The RPA process can only handle a limited number of interactions per second before the API begins returning errors.

Which policy should AnyAirlines apply to prevent the API from being overloaded?

- A. Rate Limiting - SLA
- B. Client ID Enforcement
- C. Spike Control
- D. JSON threat protection

Answer: C

Explanation:

To prevent an API from being overloaded, the Spike Control policy is suitable. It helps manage sudden bursts of traffic by limiting the rate at which requests are processed. Here's how it works:

Preventing Overloads:

Spike Control smooths out bursts of incoming requests by enforcing a rate limit over a short period, protecting the backend systems from being overwhelmed by excessive traffic.

Configuration:

Apply the Spike Control policy to the API to define the maximum number of requests allowed within a specific timeframe.

This ensures that the API can handle a limited number of interactions per second, preventing errors due to overload.

Implementation:

In Anypoint Platform, configure the Spike Control policy to the desired thresholds, ensuring the RPA process can handle the load effectively without errors.

Anypoint Platform Spike Control Documentation

NEW QUESTION # 44

A MuleSoft developer at AnyAirlines wants to retrieve customer data from an external system.

Before designing a new integration, what should they use to determine if the integration exists and can be reused?

- A. Anypoint Exchange
- B. Design Center
- C. Anypoint Studio
- D. MuleSoft Composer

Answer: A

Explanation:

To determine if an integration exists and can be reused, the MuleSoft developer should use Anypoint Exchange:

Anypoint Exchange:

Anypoint Exchange is a repository where developers can publish, share, and discover reusable assets such as APIs, connectors, templates, and examples. It serves as a centralized location for all reusable components within the MuleSoft ecosystem.

By searching Anypoint Exchange, the developer can find existing integrations or assets that might fulfill the requirements for retrieving customer data, avoiding the need to design and develop a new integration from scratch.

Anypoint Exchange Documentation

NEW QUESTION # 45

Northern Trail Outfitters (NTO) has a new business channel that requires exposing their existing non- MuleSoft APIs to the public. They do not have an Anypoint Flex Gateway.

The NTO digital channel team wants to leverage Anypoint Platform as its API management tool.

What is the most time-efficient mechanism of securing their backend systems?

- A. Rewrite the existing APIs using MuleSoft.
- **B. Create a proxy in front of each existing API.**
- C. Use a basic endpoint with a configured consumer endpoint.
- D. Expose each endpoint as a basic endpoint.

Answer: B

Explanation:

To expose existing non-MuleSoft APIs and secure them efficiently using Anypoint Platform, you can create API proxies. This approach provides several benefits:

API Proxy Creation:

Creating a proxy involves setting up an intermediary that forwards requests to the existing backend APIs. This allows you to leverage Anypoint Platform's API management capabilities without rewriting the existing APIs.

Proxies can be created quickly and configured to apply various security and governance policies.

Security and Management:

By creating a proxy, you can secure the APIs using Anypoint Platform's features such as rate limiting, authentication, and monitoring. This method is time-efficient and leverages the robust security features of the Anypoint Platform without significant redevelopment effort.

NEW QUESTION # 46

A Salesforce flow needs to connect to external APIs provided by Northern Trail Outfitters (NTO) and AnyAirlines to retrieve data.

Which three steps should be taken to connect to the external APIs? (Choose three.)

- A. Use a Virtual service to call and consume the appropriate API in the Salesforce flow.
- **B. Create Named Credentials in Salesforce for NTO and AnyAirlines.**
- **C. Create External Services in Salesforce for NTO and AnyAirlines.**
- **D. Use an Action element to call and consume the appropriate API in the Salesforce flow.**
- E. Create Named Credentials in Anypoint for NTO and AnyAirlines.

Answer: B,C,D

Explanation:

To connect a Salesforce flow to external APIs, follow these steps:

Create Named Credentials in Salesforce:

Named Credentials in Salesforce simplify the authentication process by storing the URL and authentication details needed to call the external service. Set up Named Credentials for both NTO and AnyAirlines APIs.

Navigate to Salesforce Setup > Named Credentials > New Named Credential.

Enter the details for NTO API, including the endpoint URL and authentication settings.

Repeat the process for the AnyAirlines API.

Create External Services in Salesforce:

External Services allow you to register the external APIs with Salesforce so that they can be invoked from a flow.

Navigate to Salesforce Setup > External Services > New External Service.

Use the OpenAPI/Swagger or RAML specification files provided by NTO and AnyAirlines to register their APIs.

This step involves importing the API specifications and configuring the services, which will be used in the flow.

Use an Action Element in Salesforce Flow:

Within Salesforce Flow, use the Action element to call the external services that were registered.

This involves adding an Action to your flow and selecting the appropriate External Service action that corresponds to the API method you want to invoke.
