But even the best people fail sometimes. In addition to the lack of effort, you may also not make the right choice on our 400-007 Exam Questions. A good choice can make one work twice the result with half the effort, and our 400-007 study materials will be your right choice.

Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q365-Q370):

NEW QUESTION # 365

Which architecture does not require an explicit multicast signaling protocol, such as PIM or P2MP, to signal the multicast state hop-by-hop, but instead uses a link state protocol to advertise the multicast forwarding state?

- A. Bit indexed explicit replication
- B. Bi-directional implicit replication
- C. Binary intermediate enhanced routing
- D. Binary indexed explicit routing

Answer: A

NEW QUESTION # 366

A service provider hires you to design its new managed CE offering to meet these requirements:

- * The CEs cannot run a routing protocol with the PE.
- * Provide the ability for equal or unequal ingress load balancing in dual-homed CE scenarios.
- * Provide support for IPv6 customer routes.
- * Scale up to 250,000 CE devices per customer.
- * Provide low operational management to scale customer growth.
- * Utilize low-end (inexpensive) routing platforms for CE functionality.

Which tunneling technology do you recommend?

- A. point-to-point GRE
- **B. LISP**
- C. DMVPN
- D. FlexVPN

Answer: B

Explanation:

- * D (LISP - Locator/ID Separation Protocol):
- * Supports massive scale with centralized control plane (mapping servers).
- * CE routers do not run routing protocols with PE.
- * Allows load balancing and multi-homing using locator sets.
- * Supports IPv4 and IPv6.
- * Lightweight CE requirements fit low-cost platforms.

Why other options are incorrect:

- * A: FlexVPN is control-plane intensive and less scalable for large managed CE deployments.
- * B: Point-to-point GRE doesn't scale well with 250,000 CEs.
- * C: DMVPN requires routing protocol overlays which violate the requirement.

NEW QUESTION # 367

Network changes due to mergers, acquisitions, and divestitures can be highly disruptive if not carefully planned. When an organization sells part of its business, it must detach those parts of the network with minimal risk and downtime.

Which network design approach is appropriate to minimize the impact and risks as the divested parts of the network are detached?

- A. Routed access design
- **B. Modular design**
- C. Redundant design
- D. Less complex design

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

- * B: Modular network design allows the network to be broken into independent functional units (modules) such as access, distribution, data center, WAN, and edge. When divesting part of a business, modularity allows specific segments (like a business unit or site) to be isolated and removed with minimal impact on other components.

Other options:

- * A (Redundant design): Enhances high availability but doesn't address separation or detachment flexibility.
- * C (Less complex design): While simpler, it may not provide the isolation necessary to enable selective detachment.
- * D (Routed access): Refers to Layer 3 access layer designs, useful in access control but not focused on business separation scenarios.

NEW QUESTION # 368

You have been tasked with designing a data center interconnect to provide business continuity. You want to encrypt the traffic over the DCI using IEEE 802.1AE MACsec to prevent the deployment of any firewall or IPS. Which two interconnect technologies support MACsec? (Choose two.)

- **A. EoMPLS**
- B. MPLS Layer 3 VPN
- C. GET VPN

- D. KVPLS
- E. DMVPN

Answer: A,D

Explanation:

- * A (EoMPLS): Ethernet over MPLS can operate at Layer 2, and MACsec can encrypt traffic before entering the MPLS core.
- * E (KVPLS): Supports MACsec encryption for Layer 2 DCI services over VPLS solutions.

Why other options are incorrect:

- * B: MPLS L3 VPN operates at Layer 3, not suitable for MACsec (L2 encryption).
- * C: DMVPN uses IPsec, not MACsec.
- * D: GET VPN uses IPsec for L3 traffic encryption.

NEW QUESTION # 369

What is a characteristic of a secure cloud architecture model?

- A. dedicated and restricted workstations
- B. limited access to job function
- C. software-defined network segmentation
- D. multi-factor authentication

Answer: C
