The high quality of SSM certification exam preparation products increases your success probability and reduces the chances of failure. The SSM exam preparation products contain all the features to make you ready for embracing success in a first attempt. These SSM Exam Preparation products are updated regularly for guaranteed success. Free demo is also offered to the users for checking

the SSM exam preparation products quality.

## Scrum SSM (6.0) - SAFe® Scrum Master Sample Questions (Q16-Q21):

### NEW QUESTION # 16

Team A works collaboratively on new functionality for a customer application. The acceptance criteria have each been minimally met.

Team A decides to release the functionality with a method for collecting direct customer feedback. Which of the following high-performing team characteristics is Team A demonstrating?

- A. Balancing abilities on the team with the challenge of the work
- **B. Using regular feedback loops built into the learning cycle**
- C. Focusing on success over trying to avoid failures
- D. Taking appropriate risks without fear of failure

**Answer: B**

Explanation:

One of the high-performing team characteristics that Team A is demonstrating is using regular feedback loops built into the learning cycle. A high-performing Agile Team is a cross-functional group of people that have everything, and everyone, necessary to produce a working, tested increment of product<sup>1</sup>. They are empowered, collaborative, aligned, and committed to delivering value to the customers and the organization<sup>1</sup>. One of the factors that enable a high-performing Agile Team is using regular feedback loops to learn and improve. Feedback loops are mechanisms that provide the team with information about the outcomes and impacts of their actions, as well as the needs and expectations of their customers and stakeholders<sup>2,3</sup>. Feedback loops help the team to validate their assumptions, measure their progress, and adjust their plans accordingly<sup>2,3</sup>. Feedback loops also help the team to foster a culture of experimentation, innovation, and continuous improvement, as well as to increase customer satisfaction and loyalty<sup>2,3</sup>. Team A is using regular feedback loops by releasing the functionality with a method for collecting direct customer feedback. This allows them to learn from the actual users of their product, and to incorporate their feedback into the next iteration of development. This way, they can deliver value faster and more effectively, as well as to enhance the quality and usability of their product<sup>4</sup>.

### NEW QUESTION # 17

\_\_\_\_\_ are the primary artifact used to define system behavior in Agile.

- A. Vision documents
- B. Business ideas
- C. Requirements
- **D. Stories**

**Answer: D**

### NEW QUESTION # 18

Which of the following SAFe events supports Agile Teams to measure the outcome of the Iteration?

- A. The Team Retrospective
- **B. The Iteration Review**
- C. The System Demo
- D. The Team Sync

**Answer: B**

Explanation:

In SAFe, the Iteration Review is the event where the Agile Team measures and demonstrates the outcome of the iteration. The team reviews the completed work, compares it against the iteration goals, and gathers feedback from stakeholders.

This review allows the team to assess whether the iteration delivered the intended value and identify areas for improvement in future

iterations. The focus is on transparency, empirical measurement, and alignment to customer needs.

From SAFe guidance:

"The Iteration Review provides the opportunity for the team to demonstrate the increment, measure progress toward iteration goals, and collect feedback." Thus, the correct answer is A. The Iteration Review, as it specifically measures the outcome of the iteration and validates progress.

### NEW QUESTION # 19

Which SAFe organizational construct allows businesses to build large and complex systems in a Lean-Agile manner?

- **A. Agile Release Train**
- B. Portfolio
- C. Solution Train
- D. Value Stream

**Answer: A**

Explanation:
