Salesforce Plat-Admn-301 Exam Guide Materials | Exam Plat-Admn-301 Outline

We are a team of IT professionals that provide our customers with the up-to-date Plat-Admn-301 study guide and the current certification exam information. Our exam collection contains the latest questions, accurate Plat-Admn-301 Exam Answers and some detailed explanations. You will find everything you want to overcome the difficulties of Plat-Admn-301 practice exam and questions. You will get high mark followed by our materials.

Salesforce Certified Platform Administrator II Sample Questions (Q164-

Q169):

NEW QUESTION # 164

An administrator at Cloud kicks recently built a screen flow in a sandbox that creates a case and follow-up task. When the flow runs in the sandbox, it works just as expected. When tested in production, the flow errors when creating the records.
Choose 2 answers

- A. Change the Default Case Creator to the user's manager.
- B. Change the user experiencing the issue to the System Administrator profile.
- C. Open the flow In Debug mode and Run the Flow as another user.
- D. Log in as another user and run the flow.

Answer: C,D

Explanation:
Opening the flow in Debug mode and running it as another user allows simulating how the flow behaves for different users with different permissions and settings. This can help identify any issues related to user

NEW QUESTION # 165

DreamHouse Realty currently deals only with single-family homes but is expanding its business it include condos in large cities. There are some features and amenities that inly apply to condos, such as the amount of a deposit and concierge services.
How should an administrator configure the Opportunity object to ensure that only relevant fields are displayed on the record?
How should an administrator configure the Opportunity object to ensure that only relevant fields are displayed on the record?

- A. Build a Lightning component to display fields that only apply to condos.
- B. Configure a validation rule to display fields based on the type of property the user is viewing.
- C. Create a Record Type for the type of property and custom page layouts for each.
- D. Make is custom Lightning page to display specific fields based on the type of property.

Answer: C

Explanation:
A record type allows administrators to offer different business processes, picklist values, and page layouts to different users based on their profiles. By creating a record type for the type of property (single-family home or condo), DreamHouse Realty can assign different page layouts to each record type that display only relevant fields for each property type. The record type can also determine which sales process and path are available for each opportunity. References: https://help.salesforce.com/s/articleView?id=sf.customize_recordtype.
htm&type=5

NEW QUESTION # 166

The security department at AW Computing wants to prevent users from exporting more data than they need.
Included in this request is limiting records containing sensitive information, such as bank accounts and Personal Identifiable Information (PII).
Which feature should an administrator recommend to help limit what data is exported?

- A. Export Data Settings
- B. Salesforce Shield
- C. Muted Permission Sets
- D. Salesforce Platform Encryption

Answer: B

Explanation:
To limit data exports, especially for sensitive information, Export Data Settings in Salesforce are specifically designed to control user access to export data. These settings allow administrators to restrict who can export data from Salesforce, helping to protect sensitive information like bank accounts and Personal Identifiable Information (PII).
* Export Data Settings:
* Salesforce provides administrators with the ability to manage permissions related to data export functions. This includes restricting access to tools like Data Export, Data Loader, and Report Exports.

* By limiting these permissions, administrators can control which users are allowed to export data, thereby reducing the risk of sensitive data, such as PII, being exported by unauthorized individuals.
* This is particularly useful for ensuring that only designated roles or users can export data, as per the organization's data security policies.
* Specific Use Case for Sensitive Information:
* In a scenario where the focus is on preventing unnecessary access to sensitive information, Export Data Settings directly target the ability to export data and can be customized based on the security needs of the organization.
* By disabling or limiting export permissions for specific profiles or roles, AW Computing can better manage the risk associated with handling sensitive data.
Incorrect options:
* Salesforce Platform Encryption: While it protects sensitive data at rest by encrypting fields and files, it does not control export capabilities or prevent users from exporting data.
* Salesforce Shield: This suite includes event monitoring, encryption, and audit trail features, which enhance security but do not specifically limit export permissions.
* Muted Permission Sets: These are used to restrict permissions in permission set groups but are not designed to manage or limit data export capabilities directly.
In conclusion, Export Data Settings offer the most precise control over data export capabilities in Salesforce, making it the best solution to meet the security department's requirement.
Reference: According to Salesforce documentation, administrators can utilize Export Data Settings to manage and restrict data export permissions across the organization

NEW QUESTION # 167
Cloud Kicks uses a Review junction object to track product reviews by account. the Review object has a Master-Detail relationship to Account and a Master-Detail relationship to a customer Product object. A user accidentally deleted the Account, Product, and related Review records.
How should the deleted Review records be restored?

- A. Restore either the Account or Product master records from the Recycle Bin.
- B. Restore both the Account and Product master records from the Recycle Bin.
- C. The Review object records are permanently deleted without the ability to restore.
- D. Restore the Review junction object record from the Recycle Bin.

Answer: B

Explanation:
To restore the deleted Review records, you need to restore both the Account and Product master records from the Recycle Bin. A master-detail relationship is a type of relationship that links two objects together and enforces a parent-child relationship between them. A master-detail relationship affects the security and deletion of the child records. If you delete a master record, all of its detail and subdetail records are deleted as well and moved to the Recycle Bin. To restore a detail or subdetail record, you must first restore its parent record. References: https://help.salesforce.com/s/articleView?id=sf.relationships_considerations.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.recyclebin_overview.htm&type=5

NEW QUESTION # 168
Cloud Kicks needs to create 10 separate environments for various projects. A developer sandbox has been created with the necessary configuration and data. The administrator needs to create 10 now environments with the same metadata and data for each user.
What should the administrator do to meet the requirements?

- A. Use a scratch org definition to copy sandbox.
- B. Use the existing sandbox as a sandbox template.
- C. Use refresh sandbox without Auto Activate.
- D. Use clone a sandbox option from the existing sandbox.

Answer: D

Explanation:
Cloning a sandbox creates a duplicate copy of an existing sandbox with the same type, name, description, configuration, and license type as the original sandbox. Cloning a sandbox is useful when you need to create multiple sandboxes with the same metadata and data for testing or development purposes. References:
