Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q223-Q228):

NEW QUESTION # 223

An application that runs on an Amazon EC2 instance needs to access and make API calls to multiple AWS services. What is the MOST secure way to provide access to the AWS services with MINIMAL management overhead?

- A. Use AWS root user to make requests to the application.
- B. Use AWS KMS to store and retrieve credentials.
- C. Store and retrieve credentials from AWS CodeCommit.
- **D. Use EC2 instance profiles.**

Answer: D

Explanation:

NEW QUESTION # 224

An ecommerce startup is preparing for an annual sales event. As the traffic to the company's application increases, the development team wants to be notified when the Amazon EC2 instance's CPU utilization exceeds 80%.

Which solution will meet this requirement?

- A. Create a custom AWS CloudTrail alarm that sends a notification to an Amazon SNS topic when the CPU utilization exceeds 80%.
- B. Create a custom Amazon CloudWatch alarm that sends a notification to an Amazon SNS topic when the CPU utilization exceeds 80%.
- C. Create a cron job on the EC2 instance that executes the `--describe-instance-information` command on the host instance every 15 minutes and sends the results to an Amazon SNS topic.
- D. Create an AWS Lambda function that queries the AWS CloudTrail logs for the CPUUtilization metric every 15 minutes and sends a notification to an Amazon SNS topic when the CPU utilization exceeds 80%.

Answer: C

NEW QUESTION # 225

A developer implemented a static website hosted in Amazon S3 that makes web service requests hosted in Amazon API Gateway AWS Lambda. The site is showing an error that reads

"No 'Access-Control-Allow-Origin' header is present on the requested resource. Origin 'null' is therefore not allowed access." What should the developer do to resolve this issue?

- A. Enable cross-origin resource sharing (CORS) on the S3 bucket.
- B. Add the Access-Control-Request-Method header to the request.
- C. Add the Access-Control-Request-Headers header to the request.
- D. Enable cross-origin resource sharing (CORS) for the method in API Gateway.

Answer: D

Explanation:

Explanation:

<https://docs.aws.amazon.com/apigateway/latest/developerguide/how-to-cors-console.html>

NEW QUESTION # 226

A developer wants to build an application that will allow new users to register and create new user accounts.

The application must also allow users with social media accounts to log in using their social media credentials.

Which AWS service or feature can be used to meet these requirements?

- A. AWS IAM
- B. AWS Directory Service
- C. Amazon Cognito user pools
- D. Amazon Cognito identity pools

Answer: C

Explanation:
