

Analytics-Admn-201 Schulungsangebot - Analytics-Admn-201 Simulationsfragen & Analytics-Admn-201 kostenlos downloaden

P.S. Kostenlose 2026 Salesforce Analytics-Admn-201 Prüfungsfragen sind auf Google Drive freigegeben von ZertPruefung verfügbar: <https://drive.google.com/open?id=1s18G9wIq0kY9aMVxCz-RDuegQ-E9XXIk>

Wenn Sie Ihre IT-Fähigkeiten erhöhen und die Salesforce Analytics-Admn-201 Zertifizierungsprüfung einmalig bestehen möchten, können Sie auf ZertPruefung vertrauen. Denn ZertPruefung kann Ihnen helfen, das Prüfungszertifikat zu bekommen, indem wir Ihnen die zutreffendsten und genauesten Fragenkataloge zur Salesforce Analytics-Admn-201 Zertifizierungsprüfung anbieten. Wenn Sie mit dem Kaufen noch zögern, können Sie die Demo auf unserer Webseite ZertPruefung herunterladen. Wir sind sicher, dass Sie nicht enttäuscht sein werden.

Salesforce Analytics-Admn-201 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none">• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

Thema 2	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Thema 3	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Thema 4	<ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Thema 5	<ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Salesforce Analytics-Admn-201 VCE Dumps & Testking IT echter Test von Analytics-Admn-201

Wir ZertPruefung bieten die besten Service an immer vom Standpunkt der Kunden aus. 24/7 online Kundendienst, kostenfreie Demo der Salesforce Analytics-Admn-201, vielfältige Versionen, einjährige kostenlose Aktualisierung der Salesforce Analytics-Admn-201 Prüfungssoftware sowie die volle Rückerstattung beim Durchfall usw. Das alles ist der Grund dafür, dass wir ZertPruefung zuverlässig ist. Wenn Sie die Salesforce Analytics-Admn-201 Prüfung mit Hilfe unserer Produkte bestehen, hoffen wir Ihnen, unsere gemeinsame Anstrengung nicht zu vergessen!

Salesforce Certified Tableau Server Administrator Analytics-Admn-201 Prüfungsfragen mit Lösungen (Q34-Q39):

34. Frage

You need to verify the status of the Coordination Service ensemble in a high-availability (HA) Tableau Server cluster. What should you do?

- A. Run the command `tsm maintenance ziplogs`
- **B. Run the command `tsm status -v`**
- C. Examine the Tableau Server Status page
- D. Examine the Tableau Services Manager (TSM) web client Status page

Antwort: B

Begründung:

In an HA Tableau Server cluster, the Coordination Service (ZooKeeper ensemble) maintains cluster state- let's find the best way to check it:

* Coordination Service:

- * Runs on multiple nodes (3 or 5 in HA) to ensure quorum and failover.
- * Status indicates if it's running and synced-critical for cluster health.
- * Option C (Run tsm status -v): Correct.
- * Details: tsm status --verbose lists all processes across nodes, including Coordination Service (e.g., "Coordination Service: RUNNING").
- * Why Best: Provides detailed, node-specific status in the CLI-e.g., "Node 1: RUNNING, Node 2: RUNNING."
- * Use: Run on the initial node; -v ensures full output.
- * Option A (TSM web client Status page): Incorrect.
- * Why: The TSM UI (Server > Status) shows process counts (e.g., "Coordination Service: 3 instances"), but not detailed per-node status-less granular than CLI.
- * Option B (tsm maintenance ziplogs): Incorrect.
- * Why: Generates log archives for troubleshooting, not a real-time status check.
- * Option D (Tableau Server Status page): Incorrect.
- * Why: The Server Status page (Server > Status in the web UI) monitors application processes (e.g., VizQL), not TSM's Coordination Service.

Why This Matters: Coordination Service health ensures HA stability-tsm status -v is the admin's go-to for precision.
 Reference: Tableau Server Documentation - "Check Server Status" (https://help.tableau.com/current/server/en-us/tsm_status.htm).

35. Frage

What two events must occur for Tableau Server to recompute queries for a workbook cache after a scheduled refresh? (Choose two.)

- A. The workbook has been viewed recently
- B. The workbook has upcoming scheduled refresh tasks
- C. The workbook was published in the last month
- D. The All Users group has a permission rule allowing access to the workbook

Antwort: A,B

Begründung:

Tableau Server uses caching to speed up workbook loading by storing query results. After a scheduled extract refresh updates the data, the cache may need recomputing-let's dive into the mechanics:

* Caching Basics:

* VizQL Cache: Stores rendered views and query results for faster access.

* Refresh Trigger: A scheduled refresh updates the underlying extract (.hyper), but the cache isn't automatically invalidated-it's demand-driven.

* Recompute Conditions: Tableau recomputes the cache when the workbook is accessed (viewed) and its data has changed (e.g., via refresh).

* Evaluation:

* Option B (The workbook has upcoming scheduled refresh tasks): Correct.

* Why: An upcoming refresh task indicates the workbook relies on an extract with a schedule. After the refresh runs, the data changes, priming the cache for recomputation on next view. Without a schedule, no refresh occurs, so this is a prerequisite.

* Detail: Schedules are set in Schedules > Tasks-e.g., "Daily at 2 AM."

* Option D (The workbook has been viewed recently): Correct.

* Why: Viewing triggers cache recomputation if the data has changed (e.g., post-refresh).

Tableau uses a "lazy caching" model-cache updates only when a user loads the workbook, ensuring fresh results.

* Detail: "Recently" isn't strictly defined but implies post-refresh access.

* Option A (Published in the last month): Incorrect.

* Why: Publish date is irrelevant-cache recomputation ties to data changes and access, not publication timing.

* Option C (All Users group has permission rule allowing access): Incorrect.

* Why: Permissions enable viewing, but recomputation requires actual access (viewing) and a refresh event, not just potential access.

Why This Matters: Caching balances performance and freshness-understanding triggers prevents stale data surprises.

Reference: Tableau Server Documentation - "Caching and Performance" (https://help.tableau.com/current/server/en-us/perf_cache.htm).

36. Frage

Which three data sources support Kerberos delegation with Tableau Server? (Choose three.)

- A. SAP HANA
- B. Teradata
- C. SQL Server
- D. PostgreSQL

Antwort: A,B,C

Begründung:

Kerberos delegation allows Tableau Server to pass a user's Kerberos credentials to a data source for seamless authentication (SSO)-let's explore which sources support it:

* Kerberos Overview:

* Used with Active Directory (AD) for SSO in Windows environments.

* Tableau Server delegates the user's ticket to the data source, avoiding embedded credentials.

* Requires:

* Data source support for Kerberos.

* Proper configuration (e.g., SPN, constrained delegation).

* Supported Data Sources: Per Tableau's documentation:

* Option A (Teradata): Correct.

* Details: Supports Kerberos delegation-common in enterprise data warehouses.

* Config: Enable in TSM (tsm authentication kerberos configure) and set SPN for Teradata.

* Option C (SQL Server): Correct.

* Details: Fully supports Kerberos-widely used with AD-integrated SQL Server instances.

* Config: Requires AD setup and "Trustworthy" delegation in SQL Server.

* Option D (SAP HANA): Correct.

* Details: Supports Kerberos SSO via delegation-popular in SAP ecosystems.

* Config: Needs HANA Kerberos setup (e.g., keytab) and Tableau Server integration.

* Option B (PostgreSQL): Incorrect.

* Why: Supports Kerberos authentication natively, but Tableau Server doesn't enable delegation to PostgreSQL-users must embed credentials or use other methods (e.g., OAuth).

Why This Matters: Kerberos delegation enhances security by avoiding stored passwords-knowing supported sources ensures SSO feasibility.

Reference: Tableau Server Documentation - "Kerberos Delegation" (https://help.tableau.com/current/server/en-us/kerberos_delegation.htm), "Supported Connectors" (<https://help.tableau.com/current/server/en-us/datasource.htm>).

37. Frage

A new engineer reports that he is unable to log on to Tableau Services Manager (TSM) from the initial node of a Windows test cluster. Which account credentials should you instruct the engineer to use?

- A. An account for the Tableau Server administrator
- B. An account with administrative rights to the computer
- C. An account with a Site Administrator role
- D. An account with a Creator site role

Antwort: B

Begründung:

Tableau Services Manager (TSM) is the administrative tool for managing Tableau Server's configuration, processes, and topology.

To log in to TSM (via the web UI at <https://<server>:8850> or CLI), you need:

* TSM administrator credentials: These are distinct from site roles and are set during installation or reset via tsm reset.

* Local administrative rights: On Windows, the account used to access TSM must be in the local Administrators group on the initial node, as TSM interacts with system-level services.

In a test cluster, the engineer's inability to log in suggests they lack either the correct TSM credentials or sufficient OS-level permissions. Since the question focuses on a Windows environment and "initial node," the most immediate requirement is local administrative rights to run TSM commands or access the UI.

* Option C (An account with administrative rights to the computer): Correct. The engineer must use an account in the local Administrators group on the initial node to authenticate to TSM. After that, they'll need the TSM admin username/password set during installation.

* Option A (An account with a Creator site role): Incorrect. Site roles (e.g., Creator) apply to content access within Tableau Server, not TSM administration.

* Option B (An account with a Site Administrator role): Incorrect. Site Administrators manage site content, not server-level TSM functions.

* Option D (An account for the Tableau Server administrator): Partially correct but incomplete. This likely refers to the TSM admin account, but without local admin rights on the machine, login will fail.

Option C is more precise.

Reference: Tableau Server Documentation - "TSM Authentication" (https://help.tableau.com/current/server/en-us/tsm_overview.htm#authentication).

38. Frage

What should you do to ensure that server tasks associated with a particular schedule run one-at-a-time?

- A. Set Frequency to Hourly
- **B. Set Execution to Serial**
- C. Set Execution to Parallel
- D. Set Default priority to 0

Antwort: B

Begründung:

In Tableau Server, schedules manage tasks such as extract refreshes and subscriptions. The execution mode of a schedule determines how tasks within that schedule are processed by the Background process:

* Parallel: Tasks run simultaneously (up to the Background process's capacity), which is the default setting.

* Serial: Tasks run one-at-a-time in sequence, ensuring that one task completes before the next begins.

To ensure tasks associated with a particular schedule run one-at-a-time, you must configure the schedule's execution mode to Serial. This is done in the Tableau Server web interface:

* Go to Schedules.

* Select the schedule, click Actions > Edit Schedule.

* Under Execution, choose Serial instead of Parallel.

* Option A (Set Execution to Serial): Correct. This directly addresses the requirement by forcing tasks to execute sequentially.

* Option B (Set Default priority to 0): Incorrect. Priority (1-100) determines the order of task execution across all schedules, not whether tasks run one-at-a-time within a single schedule. Also, 0 is not a valid priority value (minimum is 1).

* Option C (Set Frequency to Hourly): Incorrect. Frequency (e.g., hourly, daily) controls when the schedule runs, not how tasks within it are executed.

* Option D (Set Execution to Parallel): Incorrect. Parallel execution allows tasks to run simultaneously, which contradicts the requirement.

Reference: Tableau Server Documentation - "Create or Modify a Schedule" (https://help.tableau.com/current/server/en-us/schedule_manage_create.htm).
