

Free PDF HP - HPE6-A85 - Efficient Aruba Certified Campus Access Associate Exam Latest Test Labs

2026 Latest itPass4sure HPE6-A85 PDF Dumps and HPE6-A85 Exam Engine Free Share: <https://drive.google.com/open?id=1-6Jocc1nBL4JcuahIDnssztkVQa5MI3t>

itPass4sure offers updated HPE6-A85 questions in a PDF document. These HPE6-A85 real exam questions come with accurate answers, ensuring reliability and authenticity. The PDF format provides portability, allowing you to study for the HP HPE6-A85 examination without time and location constraints. You can access the PDF file on your laptop, tablet, or smartphone, making it incredibly convenient.

HP HPE6-A85 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Switching	19%	- Aruba CX switch configuration - Layer 2/Layer 3 technologies - VLANs, trunking and STP - Campus architecture design
Topic 2: Network Resiliency and Virtualization	8%	- Redundancy and fault tolerance - Virtual switching concepts - Infrastructure device management
Topic 3: Management and Monitoring	7%	- Aruba Central management platform - Health and performance assessment - Network monitoring tools
Topic 4: Connectivity	10%	- Foundational networking architectures - Infrastructure deployment principles
Topic 5: Troubleshooting	4%	- Troubleshooting methodologies - Common network issues resolution
Topic 6: Network Stack	7%	- TCP/IP stack concepts - OSI Model layers and architectural elements
Topic 7: Authentication and Authorization	6%	- AAA concepts and operation - Access control methods
Topic 8: Performance Optimization	3%	- QoS principles and implementation
Topic 9: WLAN	18%	- Radio Frequency (RF) attributes - WLAN security and SSID setup - AP configuration and groups - Roaming and mobility basics

Topic 10: Security	9%	- Security standards and concepts - ClearPass integration basics - Wired and wireless security policies - ACLs and traffic filtering
Topic 11: Routing	9%	- Dynamic routing protocols - Routing topology design - Static routing configuration

Quiz Latest HP - HPE6-A85 - Aruba Certified Campus Access Associate Exam Latest Test Labs

If you still have a trace of enterprise, you really want to start working hard! HPE6-A85 exam questions are the most effective helpers on your path. By using HPE6-A85 study engine, your abilities will improve and your mindset will change. Who does not want to be a positive person? This is all supported by strength! In any case, a lot of people have improved their strength through HPE6-A85 Exam simulating. They now have the opportunity they want. Whether to join the camp of the successful ones, purchase HPE6-A85 study engine, you decide for yourself!

HP Aruba Certified Campus Access Associate Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11

What is the ideal Aruba access switch for a cost-effective connection to 200-380 clients, printers and APs per distribution rack?

- A. Aruba CX 6200
- B. Aruba CX 6000
- C. Aruba CX 6400
- **D. Aruba CX 6300**

Answer: D

Explanation:

The Aruba CX 6300 Series is an ideal access switch for medium to high-density client environments, offering a range of models that can accommodate various port densities and types. For a distribution rack supporting 200-380 clients, printers, and APs, the CX 6300 provides the necessary port density and performance capabilities, including high-speed uplinks, support for Class 4 PoE (PoE+), and stacking capabilities. This series is cost-effective and designed for enterprises requiring reliable connectivity and consistent performance. The other options, such as the CX 6400, CX 6200, and CX 6000, may either be over-specified and more expensive (CX 6400), not offer the necessary port density (CX 6200), or not exist in the product line (CX 6000).

NEW QUESTION # 12

Match each AAA service with its correct definition (Matches may be used more than once or not at all)

Answer:

Explanation:

Explanation:

AAA Authentication, Authorization, and Accounting (AAA) Authentication, Authorization, and Accounting (AAA) is a framework that provides security services for network access control. AAA consists of three components:

- * Authentication: The process of verifying the identity of a user or device that wants to access the network based on credentials such as username and password, certificates, tokens, etc. Authentication can use different protocols such as PAP, CHAP, EAP, RADIUS, TACACS+, etc.
- * Authorization: The process of granting or denying access to network resources based on the identity and privileges of a user or device. Authorization can use different methods such as ACLs, RBAC, MAC, DAC, etc.
- * Accounting: The process of recording and reporting the activities and usage of network resources by users or devices. Accounting can use different formats such as syslog, SNMP, NetFlow, etc.

service. Here is my answer:

The correct match for each AAA service with its definition is:

* Accounting: C. Tracking user activity on the network

* Authentication: D. Who can access the network based on credentials/certificates

* Authorization: B. Control users access on the network

The other options are not correct matches because:

* A list of rules that specifies which entities are permitted or denied access: This option is a definition of an access control list (ACL)

Access Control List (ACL) Access Control List (ACL) is a list of rules that specifies which entities are permitted or denied access to a network resource such as a router , switch , firewall , server , etc . ACLs can be based on different criteria such as source and destination IP addresses , port numbers , protocol types , time of day , etc . ACLs can be applied to different interfaces or directions such as inbound or outbound .ACLs can be verified by using commands such as show access-lists , show ip access-lists , debug ip packet , etc . , not an AAA service.

* Who can access the network based on credentials/certificates: This option is a definition of authentication, not authorization.

Authorization is the process of granting or denying access to network resources based on the identity and privileges of a user or device, not based on credentials/certificates.

References: [https://en.wikipedia.org/wiki/AAA_\(computer_security\)](https://en.wikipedia.org/wiki/AAA_(computer_security)) <https://www.cisco.com/c/en/us/support/docs/security-vpn/remote-authentication-dial-user-service-radius/13838-10.html>

NEW QUESTION # 13

When using HPE Aruba Networking Central, which can identify recommended steps to resolve network health issues and allows you to share detailed information with support personnel?

- A. Audit Trail
- B. Alerts and Events
- C. Overview Dashboard
- D. AIOps

Answer: D

Explanation:

AIOps in Aruba Central analyzes network data to identify issues, provides recommended remediation steps, and allows sharing detailed diagnostics with support for troubleshooting.

NEW QUESTION # 14

Which layer maintains unique source and destination logical addresses across the full path between endpoints?

- A. Layer 2 - Data Link Layer
- B. Layer 5 - Session Layer
- C. Layer 4 - Transport Layer
- D. Layer 3 - Network

Answer: D

Explanation:

The Network layer (Layer 3) provides logical addressing through IP addresses and maintains the source and destination addresses end-to-end across the entire path between communicating devices. Routers use these logical addresses to forward packets between networks.

NEW QUESTION # 15

You are in a meeting with a customer where you are asked to explain the network redundancy feature Multiple Spanning Tree (MSTP). What is the correct statement for this feature?

- A. MSTP configuration ID revision by default as switch serial number
- B. MSTP configuration ID name by default using switch serial number
- C. MSTP configuration ID revision by default as current MSTP root priority
- D. MSTP configuration ID name by default using switch IMC address

Answer: D

Explanation:

MSTP Multiple Spanning Tree Protocol. MSTP is an IEEE standard protocol for preventing loops in a network with multiple VLANs. MSTP allows multiple VLANs to be mapped to a reduced number of spanning-tree instances. configuration ID consists of two parameters: name and revision. The name is a 32-byte ASCII string that identifies the MSTP region, which is a group of switches that share the same configuration ID and VLAN-to-instance mapping. The revision is a 16-bit number that indicates the version of the configuration ID. By default, the MSTP configuration ID name is set to the switch IMC address, which is a unique identifier derived from the MAC address Media Access Control address. MAC address is a unique identifier assigned to a network interface controller (NIC) for use as a network address in communications within a network segment. of the switch. NEW QUESTION # 16

.....

In order to cater to different needs for customers, three versions for HPE6-A85 training materials are available, and you can choose the most suitable one according to your own needs. HPE6-A85 PDF version is printable, and if you prefer to practice on paper, you can choose this version and print it into hard one. HPE6-A85 Soft test engine can stimulate the real exam environment, so that you can know the process of the exam, you can choose this version. Besides, HPE6-A85 Soft test engine has two modes for practice, and it supports MS operating system. HPE6-A85 Online test engine is convenient and easy to learn, and it has testing history and performance review, if you like this mode, you can choose this version.
