Equally amazing are Test4Sure's NetSec-Pro dumps. They focus only the utmost important portions of your exam and equip you with the best possible information in an interactive and easy to understand language. Think of boosting up your career with this time-tested and the most reliable exam passing formula. NetSec-Pro Brain Dumps are unique and a feast for every ambitious professional who want to try NetSec-Pro exam despite their time constraints. There is a strong possibility that most of these dumps you will find in your actual NetSec-Pro test.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.

Topic 2	<ul style="list-style-type: none"> • GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.
Topic 3	<ul style="list-style-type: none"> • Infrastructure Management and CDSS: This section tests the abilities of security operations specialists and infrastructure managers in maintaining and configuring Cloud-Delivered Security Services (CDSS) including security policies, profiles, and updates. It includes managing IoT security with device IDs and monitoring, as well as Enterprise Data Loss Prevention and SaaS Security focusing on data encryption, access control, and logging. It also covers maintenance and configuration of Strata Cloud Manager and Panorama for network security environments including supported products, device addition, reporting, and configuration management.

Latest Real NetSec-Pro Exam - Test NetSec-Pro Engine

Our Palo Alto Networks training materials are famous at home and abroad, the main reason is because we have other companies that do not have core competitiveness, there are many complicated similar products on the market, if you want to stand out is the selling point of needs its own. Our NetSec-Pro test question with other product of different thing is we have the most core expert team to update our NetSec-Pro study materials, learning platform to changes with the change of the exam outline. If not timely updating NetSec-Pro Training Materials will let users reduce the learning efficiency of even lags behind that of other competitors, the consequence is that users and we don't want to see the phenomenon of the worst, so in order to prevent the occurrence of this kind of risk, the NetSec-Pro practice test dump give supervision and update the progress every day, it emphasized the key selling point of the product.

Palo Alto Networks Network Security Professional Sample Questions (Q65-Q70):

NEW QUESTION # 65

A primary firewall in a high availability (HA) pair is experiencing a current failover issue with ICMP pings to a secondary device. Which metric should be reviewed for proper ICMP pings between the firewall pair?

- A. Non-functional state
- B. Link monitoring
- **C. Heartbeat polling**
- D. Bidirectional Forwarding Detection (BFD)

Answer: C

Explanation:

Heartbeat polling is a core HA function to monitor connectivity between HA peers, leveraging ICMP pings to determine link health and availability.

"Heartbeat Polling uses ICMP pings to verify the connectivity and health of the HA peers. If heartbeat polling fails, the firewall considers the peer to be down and may initiate failover." (Source: HA Link and Path Monitoring) If ICMP pings fail, checking heartbeat polling logs helps identify if link or path monitoring triggers the failover.

NEW QUESTION # 66

Which two configurations are required when creating deployment profiles to migrate a perpetual VM-Series firewall to a flexible VM? (Choose two.)

- A. Choose "Fixed vCPU Models" for configuration type.
- B. Deploy virtual Panorama for management.
- **C. Allocate the same number of vCPUs as the perpetual VM.**

- **D. Allow only the same security services as the perpetual VM.**

Answer: C,D

Explanation:

When migrating from a perpetual VM-Series firewall license to a flexible VM licensing model, two critical steps are needed:

Allocate same number of vCPUs ?This ensures that the VM-Series capacity remains consistent and avoids resource bottlenecks.

When migrating perpetual VM-Series licenses to flexible VM licensing, allocate the same vCPU and memory resources to ensure equivalent performance.

Limit to same security services ?Flexible licensing requires maintaining the same security services to preserve licensing compliance.

Ensure that you allow only the same security services on the flexible VM instance as were licensed on the perpetual VM.

NEW QUESTION # 67

Which action is only taken during slow path in the NGFW policy?

- A. Security policy lookup
- B. Session lookup
- **C. SSL/TLS decryption**
- D. Layer 2-Layer 4 firewall processing

Answer: C

Explanation:

In Palo Alto Networks' Single-Pass Parallel Processing (SP3) architecture, SSL/TLS decryption occurs only during the slow path when the firewall first encounters a new session.

"SSL/TLS decryption, which requires CPU-intensive cryptographic operations, is performed during the slow path when establishing new sessions. Once decrypted, traffic is processed in the fast path for subsequent packets." (Source: Packet Flow and SP3 Architecture) After the initial decryption in the slow path, decrypted traffic is handled by fast path for efficiency.

NEW QUESTION # 68

An administrator wants to implement additional Cloud-Delivered Security Services (CDSS) on a data center NGFW that already has one enabled. What benefit does the NGFW's single-pass parallel processing (SP3) architecture provide?

- A. It allows additional security inspection devices to be added inline.
- **B. There will be only a minor reduction in performance.**
- C. There will be no additional performance degradation.
- D. It allows for traffic inspection at the application level.

Answer: B

Explanation:

The SP3 architecture of Palo Alto NGFWs ensures that additional security services (CDSS) only cause a minor reduction in performance, as traffic is inspected once in a single pass.

The single-pass parallel processing (SP3) architecture performs application identification and security enforcement simultaneously in one pass, resulting in only minor performance impacts when enabling multiple security services.

Unlike traditional multi-pass engines, SP3 architecture optimizes performance while delivering comprehensive security.

NEW QUESTION # 69

After a firewall is associated with Strata Cloud Manager (SCM), which two additional actions are required to enable management of the firewall from SCM? (Choose two.)

- A. Deploy a service connection for each branch site and connect with SCM.
- **B. Install a device certificate.**
- C. Configure a Security policy allowing "stratacloudmanager.paloaltonetworks.com" for all users.
- **D. Configure NTP and DNS servers for the firewall.**

Answer: B,D

Explanation:

To fully manage a firewall from Strata Cloud Manager (SCM), it's essential to establish trust and ensure reliable connectivity:

Configure NTP and DNS servers

The firewall must have accurate time (NTP) and name resolution (DNS) to securely communicate with SCM and related cloud services.

To ensure successful management, configure the firewall's NTP and DNS settings to synchronize time and resolve domain names such as stratacloudmanager.paloaltonetworks.com

Install a device certificate

A device certificate authenticates the firewall's identity when connecting to SCM.

The device certificate authenticates the firewall to Palo Alto Networks cloud services, including SCM. It's a fundamental requirement to establish secure connectivity.

NEW QUESTION # 70

.....

Test4Sure is a wonderful study platform that can transform your effective diligence in to your best rewards. By years of diligent work, our experts have collected the frequent-tested knowledge into our NetSec-Pro exam materials for your reference. So our practice materials are triumph of their endeavor. By resorting to our NetSec-Pro Exam Materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our NetSec-Pro practice materials, and the passing rate is 98-100 percent.
