Marvelous Fire-Inspector-II Study Dumps & Leader in Qualification Exams

& 100% Pass-Rate Fire-Inspector-II: 67 - Fire Inspector II Exam

The Pass4SureQuiz is committed to acing the 67 - Fire Inspector II Exam (Fire-Inspector-II) exam questions preparation quickly, simply, and smartly. To achieve this objective Pass4SureQuiz is offering valid, updated, and real 67 - Fire Inspector II Exam (Fire-Inspector-II) exam dumps in three high-in-demand formats. These 67 - Fire Inspector II Exam (Fire-Inspector-II) exam questions formats are PDF dumps files, desktop practice test software, and web-based practice test software. All these three 67 - Fire Inspector II Exam (Fire-Inspector-II) exam dumps formats contain the real and 67 - Fire Inspector II Exam (Fire-Inspector-II) certification exam trainers.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11

Extra-high-rack combustible storage is defined in the fire code as any storage on racks of Class I, II, III, or IV commodities which exceed ____ ft. in height, and any storage on racks of high-hazard commodities which exceed ____ ft. in height.

- A. 40; 30
- B. 20; 30
- C. 30; 40
- D. 50; 40

Answer: A

Explanation:

Definition of Extra-High-Rack Combustible Storage

According to International Fire Code (IFC) 2021, Section 3206.6, extra-high-rack combustible storage is defined as:

Class I, II, III, or IV commodities stored on racks exceeding 40 feet in height.

High-hazard commodities stored on racks exceeding 30 feet in height.

2. Understanding Rack Storage Classifications

Class I-IV Commodities: These refer to general, moderate-risk combustible materials such as wood, paper, and plastics.

High-Hazard Commodities: These are materials that have a higher fire risk, such as highly combustible plastics, flammable solids, and products prone to rapid heat release.

3. Verification of Other Options

Option A (20; 30) - Incorrect, as 40 feet is the correct threshold for Class I-IV commodities.

Option B (30; 40) - Incorrect, as 30 feet applies to high-hazard commodities, not Class I-IV commodities.

Option D (50; 40) - Incorrect, as the correct heights are 40 feet and 30 feet, respectively.

Reference Sources:

International Fire Code (IFC) 2021 - Section 3206.6 (Definition of Extra-High-Rack Storage) NFPA 13: Standard for the Installation of Sprinkler Systems (High-Rack Storage Requirements) ICC Fire Inspector II Study Guide (2021)

NEW QUESTION # 12

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. Their batteries must be checked every six months.
- B. They must initiate an automatic fire suppression or sprinkler system.
- C. They must automatically sound a fire alarm throughout the hotel.
- D. They must be interconnected so that one alarm will activate all alarms within the guest rooms.

Answer: D

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system.

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

NEW QUESTION # 13

A code official may allow the occupant load of a building or room to exceed that specified in the building code if additional exit facilities are provided, all other egress requirements are met, and the maximum occupancy does not exceed one occupant per sq. ft. of occupiable floor area.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

A code official may allow the occupant load to exceed the building code requirements if additional exit facilities are provided, all egress requirements are met, and the maximum occupancy does not exceed one occupant per 10 sq. ft. of occupiable floor area.

Reference to Fire Inspector Documentation:

1. 2021 International Building Code (IBC) - Table 1004.5 (Occupant Load Factor) The minimum safe occupancy load factor is 10 sq. ft. per occupant, meaning no space can have more than 1 person per 10 sq. ft.

Fire code officials can approve increased occupancy only if extra exits are provided, ensuring compliance with egress and fire safety rules.

2. 2021 International Fire Code (IFC) - Section 1004.2 (Increased Occupant Load Allowance) Allows for an increased occupant load only if additional exits and egress requirements are met but never beyond 1 person per 10 sq. ft.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 1 occupant per 3 sq. ft. is too high and would violate egress safety regulations.

Option B (Incorrect): 1 occupant per 5 sq. ft. still exceeds safety limits.

Option C (Incorrect): 1 occupant per 7 sq. ft. is not the minimum required standard.

Option D (Correct): 1 occupant per 10 sq. ft. is the minimum limit for allowing an increased occupant load under IFC 1004.2 and IBC Table 1004.5.

Thus, the correct and verified answer is: D. 10.

NEW QUESTION # 14

Which of the following situations requires securing of an operational permit from the code official prior to commencing the related activity?

- A. Fruit ripening operations using carbon dioxide gas.
- B. Organic coating production facility producing 2 gallons per day.
- C. Storing 85,000 bd. ft. of lumber.
- D. Inside storage of 100 cu. ft. of baled cotton.

Answer: C

Explanation:

IFC Section 105.6 lists activities requiring operational permits. For A, lumber storage exceeding 100,000 board feet (bd. ft.) indoors or outdoors requires a permit (Section 105.6.28, Lumber Yards), but local thresholds may be lower-85,000 bd. ft. is close to this limit and likely exceeds typical exempt amounts, triggering a permit in many jurisdictions. For B, IFC Table 3206.2 allows small quantities of combustible commodities like baled cotton (100 cu. ft. is minimal) without a permit unless part of a larger high-piled storage operation. For C, fruit ripening with CO₂ (Section 105.6.13) requires a permit only for specific flammable gases, not CO₂ alone, which is nonflammable. For D, organic coating production (Section

105.6.33) requires a permit only above 1 gallon per day, but 2 gallons is still small-scale and context- dependent-lumber storage is the clearer permit trigger here. Thus, A is the best answer.

Reference: IFC 2021, Section 105.6 (Required Operational Permits), Section 3206.2 (High-Piled Storage).

NEW QUESTION # 15

Two tents which each have an area of 20,000 sq. ft. shall be separated from each other by a distance of not less than:

- A. 10 ft.
- B. 0 ft. (no separation is required).
- **C. 20 ft.**
- D. 25 ft.

Answer: C

Explanation:

IFC Section 3103.8.2 (Separation of Temporary Tents) requires tents larger than 15,000 sq. ft. to be separated by at least 20 feet to prevent fire spread, unless connected by a corridor meeting specific requirements (not indicated here). Each tent at 20,000 sq. ft. exceeds this threshold, necessitating 20 feet of separation. Option A (0 ft.) applies only to smaller tents, B (10 ft.) is insufficient, and D (25 ft.) exceeds the minimum. Thus, C is correct.

NEW QUESTION # 16

.....

Our company has taken a lot of measures to ensure the quality of our Fire-Inspector-II preparation materials. It is really difficult for us to hire a professional team, regularly investigate market conditions, and constantly update our Fire-Inspector-II exam questions. But we persisted for so many years. And our quality of our Fire-Inspector-II study braindumps are praised by all of our worthy customers. And you can always get the most updated and latest Fire-Inspector-II training guide if you buy them.

Fire-Inspector-II Test Torrent: <https://www.pass4surequiz.com/Fire-Inspector-II-exam-quiz.html>

They strive to locate authentic and up-to-date International Code Council Fire-Inspector-II practice questions for the 67 - Fire Inspector II Exam exam, which is a tough ask, Excellent International Code Council Fire-Inspector-II study guide make candidates have clear studying direction to prepare for your test high efficiently without wasting too much extra time and energy, With our Fire-Inspector-II pdf torrent, you will minimize your cost on the exam preparation and be ready to pass your Fire-Inspector-II actual test on your first try.

You'll even discover how to use Cover Flow to create Fire-Inspector-II gorgeous visual selection experiences that put scrolling lists to shame, Strings are composed of zero or more characters a string with zero Fire-Inspector-II Study Dumps characters is an empty string) String values are denoted in scripts with double quotation marks.

International Code Council Fire-Inspector-II Web-based Practice Exam

They strive to locate authentic and up-to-date International Code Council Fire-Inspector-II Practice Questions for the 67 - Fire Inspector II Exam exam, which is a tough ask, Excellent International Code Council Fire-Inspector-II study guide make candidates have clear studying Fire-Inspector-II Mock Test direction to prepare for your test high efficiently without wasting too much extra time and energy.

With our Fire-Inspector-II pdf torrent, you will minimize your cost on the exam preparation and be ready to pass your Fire-Inspector-II actual test on your first try, We do not provide outdated and out of context study material.

67 - Fire Inspector II Exam Study Question can help Fire-Inspector-II Mock Test you optimize your learning method by simplifying obscure concepts.
