If you want to pass Salesforce Data-Architect exam and get a high paying job in the industry; if you are searching for the perfect Data-Architect exam prep material to get your dream job, then you must consider using our Salesforce Certified Data Architect exam products to improve your skillset. We have curated new Data-Architect Questions Answers to help you prepare for the exam. It can be your golden ticket to pass the Salesforce Data-Architect test on the first attempt. We are providing latest Data-Architect PDF question answers to help you prepare exam while working in the office to save your time.

Salesforce Certified Data Architect Sample Questions (Q114-Q119):

NEW QUESTION # 114

UC is using SF CRM. UC sales managers are complaining about data quality and would like to monitor and measure data quality. Which 2 solutions should a data architect recommend to monitor and measure data quality?

Choose 2 answers.

- A. Export data and check for data completeness outside of Salesforce.
- **B. Review data quality reports and dashboards.**
- C. Use custom objects and fields to identify issues.
- **D. Install and run data quality analysis dashboard app**

Answer: B,D

Explanation:

Reviewing data quality reports and dashboards and installing and running data quality analysis dashboard app are two solutions that can help monitor and measure data quality. Data quality reports and dashboards can provide insights into the completeness, accuracy, and consistency of the data. Data quality analysis dashboard app is a free app from AppExchange that can help analyze and improve data quality by identifying duplicate, incomplete, or inaccurate records.

NEW QUESTION # 115

Ursa Major Solar has defined a new Data Quality Plan for their Salesforce data.

Which two approaches should an Architect recommend to enforce the plan throughout the organization? (Choose two.)

- **A. Enforce critical business processes by using Workflow, Validation Rules, and Apex code.**
- **B. Schedule a weekly dashboard displaying records that are missing information to be sent to managers for review.**
- C. Schedule reports that will automatically catch duplicates and merge or delete the records every week.
- D. Ensure all data is stored in an external system and set up an integration to Salesforce for view-only access.

Answer: A,B

NEW QUESTION # 116

UC has migrated its Back-office data into an on-premise database with REST API access. UC recently implemented Sales cloud for its sales organization. But users are complaining about a lack of order data inside SF.

UC is concerned about SF storage limits but would still like Sales cloud to have access to the data.

Which design patterns should a data architect select to satisfy the requirement?

- **A. Use SF Connect to virtualize the data in SF and avoid storage limits.**
- B. Migrate and persist the data in SF to take advantage of native functionality.
- C. Develop a bidirectional integration between the on-premise system and Salesforce.
- D. Build a UI for the on-premise system and iframe it in Salesforce

Answer: A

Explanation:

The best design pattern to satisfy the requirement of accessing order data from an on-premise database with REST API access without consuming SF storage limits is to use SF Connect to virtualize the data in SF and avoid storage limits. SF Connect is an integration tool that allows users to access and integrate data from external sources using external objects. External objects are similar to custom objects, except that the data resides in another system and is accessed in real time via web service callouts. SF Connect supports various adapters to connect to different types of external data sources, such as OData, cross-org, or Apex custom adapter11. Migrate and persist the data in SF to take advantage of native functionality is not a good option because it would consume SF storage limits and require data synchronization between systems. Develop a bidirectional integration between the on-premise system and Salesforce is not a good option because it would be complex and costly to implement and maintain, and it would also consume SF storage limits. Build a UI for the on-premise system and iframe it in Salesforce is not a good option because it would not provide a seamless user experience and it would not allow users to search, report, or perform actions on the external data.

NEW QUESTION # 117

During the implementation of Salesforce, a customer has the following requirements for Sales Orders:

1. Sales Order information needs to be shown to users in Salesforce.
2. Sales Orders are maintained in the on-premises enterprise resource planning (ERP).
3. Sales Order information has more than 150 million records.
4. Sales Orders will not be updated in Salesforce.

What should a data architect recommend for maintaining Sales Orders in salesforce?

- A. Use custom big objects to maintain Sales Orders in Salesforce.
- B. Use custom objects to maintain Sales Orders in Salesforce.
- **C. Use external objects to maintain Sales Order in Salesforce.**
- D. Use Standard order object to maintain Sale Orders in Salesforce

Answer: C

NEW QUESTION # 118

Universal Containers (UC) is concerned that data is being corrupted daily either through negligence or maliciousness. They want to implement a backup strategy to help recover any corrupted data or data mistakenly changed or even deleted. What should the data architect consider when designing a field-level audit and recovery plan?

- A. Schedule a weekly export file.
- **B. Reduce data storage by purging old data.**
- C. Implement an AppExchange package.
- D. Review projected data storage needs.

Answer: B

NEW QUESTION # 119

.....

Our Data-Architect learning quiz can lead you the best and the fastest way to reach for the certification and achieve your desired higher salary by getting a more important position in the company. Because we hold the tenet that low quality Data-Architect exam materials may bring discredit on the company.
