Free PDF Quiz Salesforce - Efficient Development-Lifecycle-and-Deployment-Architect - New Salesforce Certified Development Lifecycle and

Deployment Architect Exam Guide

Decades of painstaking efforts have put us in the leading position of Development-Lifecycle-and-Deployment-Architect training materials compiling market, and the excellent quality of our Development-Lifecycle-and-Deployment-Architect guide torrent and high class operation system in our company have won the common recognition from many international customers for us. With the high class operation system, we can assure you that you can start to prepare for the Development-Lifecycle-and-Deployment-Architect Exam with our study materials only 5 to 10 minutes after payment since our advanced operation system will send the Development-Lifecycle-and-Deployment-Architect exam torrent to your email address automatically as soon as possible after payment.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q47-Q52):

NEW QUESTION # 47
What are two roles a project Steering Committee plays in determining what methodologies are used? Choose 2 answers

- A. Approving deviations from the chosen methodology, when required to address project issues
- B. Enforcing that corporate project stage gates are part of the chosen methodology
- C. Setting the criteria for selecting Agile or Waterfall methodology to be used on internal projects
- D. Designing a methodology that will meet a particular project's requirements

Answer: A,C

Explanation:
Explanation
These are the correct answers because the project steering committee plays a role in approving deviations from the chosen methodology, when required to address project issues, and setting the criteria for selecting agile or waterfall methodology to be used on internal projects. The steering committee does not design a methodology, but rather chooses one from the existing ones. The steering committee does not enforce that corporate project stage gates are part of the chosen methodology but rather ensures that the chosen methodology aligns with the corporate project stage gates.

NEW QUESTION # 48
Universal Containers (UC) is implementing Service Cloud UC's contact center receives 100 phone calls per hour and operates across North America ,Europe and APAC regions. UC wants the application to be responsive and scalable to support 150 calls considering future growth. what should be recommended test load consideration

- A. Testing load considering 10xthe current call volume.
- B. Testing load considering half the call volume.
- C. Testing load considering current call volume.
- D. Testing load considering 50% more call volume.

Answer: D

NEW QUESTION # 49
Universal Containers (UC) have developed a managed package targeted for AppExchange. The product includes some Apex code to customize and create layouts. UC is in the testing phase of the package, so it's not certified yet. During testing on the target org, the Apex code for the layouts fails.
Why are the Apex classes not able to access the metadata of the target org during testing?

- A. UC needs to get the managed package certified by the Salesforce security review.
- B. Apex Settings to allow the access to metadata is not switched on.
- C. UC needs to turn on Apex Settings within the custom metadata type.
- D. The solution is flawed. UC should utilize the Tooling API from a web service call to modify the layouts.

Answer: A

Explanation:
The reason why the Apex classes are not able to access the metadata of the target org during testing is that UC needs to get the

managed package certified by the Salesforce security review. This is because Apex code in a managed package can only access the metadata of the target org if the package has passed the security review and has been granted the Modify Metadata permission. See Apex Metadata API for more details.

NEW QUESTION # 50

Cloud Kicks is considering using an automated testing tool to help manage deployments between environments.
When should the architect recommend the use of an automated testing tool?

- A. Automated tests should be run only when merging into Full or Partial Copy sandboxes.
- B. Automated tests should be run daily in all Developer Orgs, and when branches are merged.
- C. Automated tests should be run when branches are merged.
- D. Automated tests should be run dally in all Developer Orgs.

Answer: B

Explanation:
The architect should recommend the use of an automated testing tool daily in all Developer Orgs, and when branches are merged. This strategy allows the team to catch and fix any errors or bugs early in the development cycle, and to ensure that the code is stable and consistent before deployment. Running automated tests only when branches are merged is not sufficient, as it may delay the detection and resolution of issues. Running automated tests only in Full or Partial Copy sandboxes is not advisable, as it may not cover all the scenarios and environments.

NEW QUESTION # 51

Universal Containers (UC) currently uses the org development model and utilizes the Salesforce CLI as the deployment tool. After the feature release artifact (a .zip file) has been tested in a lower sandbox, it is being deployed to the full sandbox for performance testing and production deployment readiness check-Since quick deployment options are not being used, what is the correct way to deploy the artifact to the full sandbox?

- A. Authorize to the Full sandbox org; Validate with sfdximdapi:deploy; On successful validation, deploy with sfdx:mdapi:deploy
- B. Authorize to the Full sandbox; validate with sfdx: source: deploy; On successful validation, deploy with sfdx;mdapi;deploy
- C. Authorize to the Full sandbox org; Validate with sfdx:source:deploy; On successful validation, deploy with sfdx:source:deploy
- D. Authorize to the Full sandbox org; Validate with sfdx:mdapi:deploy; On successful validation, deploy with sfdx:source:deploy

Answer: B

NEW QUESTION # 52

......

Our three versions of Development-Lifecycle-and-Deployment-Architect study materials are the PDF, Software and APP online. They have their own advantages differently and their prolific Development-Lifecycle-and-Deployment-Architect practice materials can cater for the different needs of our customers, and all these Development-Lifecycle-and-Deployment-Architect simulating practice includes the new information that you need to know to pass the test for we always update it in the first time. So you can choose them according to your personal preference.
