SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q11-Q16):

NEW QUESTION # 11

What system is provided by SAP Free of charge and provides an outline of how to deploy SAP Ariba solutions with a task list and project management format?

- A. SAP for Me
- B. SAP Cloud Project Studio
- C. SAP Cloud Application Lifecycle Management
- **D. SAP Ariba Enablement Workbook**

Answer: D

NEW QUESTION # 12

A French translation of a custom field label needs to be updated. Where do you update it?

- A. Layout tab
- B. Field Configuration + Label
- C. Customization Manager - Views
- **D. AML & Translations Upload**

Answer: D

Explanation:

SAP Ariba handles translations for custom field labels, help tips, and validation messages through the AML & Translations Upload mechanism. Administrators export the translation JSON or spreadsheet file, update the French (or other language) entries, and then re-import the updated file to apply translations.

Field Configuration + Label (C) sets the base language label but does not manage translations for other languages. The Customization Manager Views and Layout tabs are unrelated to translation management.

This method centralizes translation management and supports multiple languages consistently across the application.

NEW QUESTION # 13

Which of the following accurately describes the migration of flex master data templates using the migration tool?

- **A. The templates are migrated by the tool, but the data must be loaded manually later.**
- B. Neither the templates nor the data is migrated using the tool.
- C. Both the templates and their data are fully migrated by the tool.
- D. Only the data of the flex master data templates is migrated; templates must be created manually.

Answer: A

Explanation:

In SAP Ariba, the migration tool (Intelligent Configuration Manager - ICM) migrates flex master data templates (the structure and definitions), but it does not migrate the actual master data records. The master data itself must be manually exported from the source and imported into the target environment after templates are migrated. This separation helps ensure data integrity and allows for more controlled migration processes.
