AWS-Solutions-Architect-Professional인기자격증인증시험자료 & AWS-Solutions-Architect-Professional적중율 높은시험덤프

참고: Pass4Test에서 Google Drive로 공유하는 무료 2026 Amazon AWS-Solutions-Architect-Professional 시험 문제집이 있습니다: https://drive.google.com/open?id=1rG7aC7TbZWGt0CxDcx3xyTsZ37HCwILJ

Pass4Test에서는 시장에서 가장 최신버전이자 적중율이 가장 높은 Amazon인증 AWS-Solutions-Architect-Professional덤프를 제공해드립니다. Amazon인증 AWS-Solutions-Architect-Professional덤프는 IT업종에 몇십년간 종사한 IT전문가가 실제 시험문제를 연구하여 제작한 고품질 공부자료로서 시험패스율이 장난 아닙니다. 덤프를 구매하여 시험에서 불합격성적표를 받으시면 덤프비용 전액을 환불해드립니다.

시험을 준비하기 위해 응시자는 AWS Certified Solutions Architect -Professional Exam Guide를 검토하여 시험 목표 및 권장 연구 자원에 대한 자세한 개요를 제공합니다. 또한 AWS는 다양한 교육 과정, 실습 시험 및 기타 리소스를 제공하여 응시자가 시험 준비를하고 성공하는 데 필요한 지식과 기술을 얻도록 도와줍니다.

아마존 웹 서비스(AWS)는 전 세계에서 가장 인기 있는 클라우드 컴퓨팅 플랫폼 중 하나로, 모든 규모의 비즈니스를 위한 다양한 서비스를 제공합니다. AWS-Solutions-Architect-Professional 자격증 시험은 AWS에서 확장 가능하고 고가용성 및 내결함성 있는 시스템을 설계 및 배포하는 전문가들의 기술과 지식을 테스트하기 위해 설계되었습니다.

AWS-Solutions-Architect-Professional적중율 높은 시험덤프 & AWS-Solutions-Architect-Professional최신 업데이트 덤프공부

Pass4Test는 전문적인 IT인증시험덤프를 제공하는 사이트입니다.AWS-Solutions-Architect-Professional인증시험을 패스하려면 아주 현병한 선택입니다. Pass4Test에서는AWS-Solutions-Architect-Professional관련 자료도 제공함으로 여러분처럼 IT 인증시험에 관심이 많은 분들한테 아주 유용한 자료이자 학습가이드입니다. Pass4Test는 또 여러분이 원하도 필요로 하는 최신 최고버전의AWS-Solutions-Architect-Professional문제와 답을 제공합니다.

최신 AWS Certified Solutions Architect AWS-Solutions-Architect-Professional 무료샘플문제 (Q373-Q378):

질문 # 373
A company has an application that runs on Amazon EC2 instances in an Amazon EC2 Auto Scaling group.
The company uses AWS CodePipeline to deploy the application. The instances that run in the Auto Scaling group are constantly changing because of scaling events.
When the company deploys new application code versions, the company installs the AWS CodeDeploy agent on any new target

EC2 instances and associates the instances with the CodeDeploy deployment group. The application is set to go live within the next 24 hours.

What should a solutions architect recommend to automate the application deployment process with the LEAST amount of operational overhead?

- A. Configure Amazon EventBridge to invoke an AWS Lambda function when a new EC2 instance is launched into the Auto Scaling group. Code the Lambda function to associate the EC2 instances with the CodeDeploy deployment group.
- B. Create a new AMI that has the CodeDeploy agent installed. Configure the Auto Scaling group's launch template to use the new AMI. Associate the CodeDeploy deployment group with the Auto Scaling group instead of the EC2 instances.
- C. Write a script to suspend Amazon EC2 Auto Scaling operations before the deployment of new code When the deployment is complete, create a new AMI and configure the Auto Scaling group's launch template to use the new AMI for new launches. Resume Amazon EC2 Auto Scaling operations.
- D. Create a new AWS CodeBuild project that creates a new AMI that contains the new code Configure CodeBuild to update the Auto Scaling group's launch template to the new AMI. Run an Amazon EC2 Auto Scaling instance refresh operation.

정답: B

설명:
https://docs.aws.amazon.com/codedeploy/latest/userguide/integrations-aws-auto-scaling.html

질문 # 374

You have subscribed to the AWS Business and Enterprise support plan. Your business has a backlog of problems, and you need about 20 of your IAM users to open technical support cases. How many users can open technical support cases under the AWS Business and Enterprise support plan?

- A. 1 user
- B. Unlimited
- C. 5 users
- D. 10 users

정답: B

설명:
In the context of AWS support, the Business and Enterprise support plans allow an unlimited number of users to open technical support cases (supported by AWS Identity and Access Management (IAM)).

질문 # 375

A scientific company needs to process text and image data ....during a live, time-critical phase of a deep space mission. The radar stations upload the data to the source S3 bucket. The data is prefixed by radar station identification number.

The company created a destination S3 bucket in a second account Data must be copied from the source S3 bucket to the destination S3 bucket to meet a compliance objective This replication occurs through the use of an S3 replication rule to cover all objects in the source S3 bucket.

One specific radar station is identified as having the most accurate data Data replication at this radar station must be monitored for completion within 30 minutes after the radar station uploads the objects to the source S3 bucket.

What should a solutions architect do to meet these requirements?

- A. In the second account, create another S3 bucket to receive data from the radar station with the most accurate data Set up a new replication rule for this new S3 bucket to separate the replication from the other radar stations Monitor the maximum replication time to the destination. Create an Amazon EventBridge (Amazon CloudWatch Events) rule to trigger an alert when the time exceeds the desired threshold
- B. Enable Amazon S3 Transfer Acceleration on the source S3 bucket, and configure the radar station with the most accurate data to use the new endpoint Monitor the S3 destination bucket's TotalRequestLatency metric Create an Amazon EventBridge (Amazon CloudWatch Events) rule to trigger an alert if this status changes
- C. Create a new S3 replication rule on the source S3 bucket that filters for the keys that use the prefix of the radar station with the most accurate data Enable S3 Replication Time Control (S3 RTC) Monitor the maximum replication time to the destination Create an Amazon EventBridge (Amazon CloudWatch Events) rule to trigger an alert when the time exceeds the desired threshold

- D. Set up an AWS DataSync agent to replicate the prefixed data from the source S3 bucket to the destination S3 bucket. Select to use at available bandwidth on the task, and monitor the task to ensure that it is in the TRANSFERRING status. Create an Amazon EventBridge (Amazon CloudWatch Events) rule to trigger an alert if this status changes.

정답：A

질문 # 376

AnyCompany has acquired numerous companies over the past few years. The CIO for AnyCompany would like to keep the resources for each acquired company separate. The CIO also would like to enforce a chargeback model where each company pays for the AWS services it uses.

The Solutions Architect is tasked with designing an AWS architecture that allows AnyCompany to achieve the following:

Implementing a detailed chargeback mechanism to ensure that each company pays for the resources it uses.

AnyCompany can pay for AWS services for all its companies through a single invoice.

Developers in each acquired company have access to resources in their company only.

Developers in an acquired company should not be able to affect resources in their company only.

A single identity store is used to authenticate Developers across all companies.

Which of the following approaches would meet these requirements? (Choose two.)

- A. Create IAM users for each Developer in the account to which they require access. Create policies that allow the users access to all resources in that account. Attach the policies to the IAM user.
- B. Create a multi-account strategy with an account per company. For billing purposes, use a tagging solution that uses a tag to identify the company that creates each resource.
- C. Create a multi-account strategy with an account per company. Use consolidated billing to ensure that AnyCompany needs to pay a single bill only.
- D. Create a federated identity store against the company's Active Directory. Create IAM roles with appropriate permissions and set the trust relationships with AWS and the identity store. Use AWS STS to grant users access based on the groups they belong to in the identity store.
- E. Create a multi-account strategy with a virtual private cloud (VPC) for each company. Reduce impact across companies by not creating any VPC peering links. As everything is in a single account, there will be a single invoice. use tagging to create a detailed bill for each company.

정답：C,D

설명：
B: VPC is not enough, you need a separate account for each company.
C: IAM is per account based and hence does not satisfy "a single identity store".
E: Consolidated billing is the correct answer for this part.

질문 # 377

Pass4test has three separate departments and each department has their own AWS accounts.

The HR department has created a file sharing site where all the on roll employees' data is uploaded. The Admin department uploads data about the employee presence in the office to their DB hosted in the VPC. The Finance department needs to access data from the HR department to know the on roll employees to calculate the salary based on the number of days that an employee is present in the office.

How can Pass4test setup this scenario?

- A. Setup VPC peering for the VPCs of Admin and Finance.
- B. It is not possible to configure VPC peering since each department has a separate AWS account.
- C. Setup VPC peering for the VPCs of Admin and HR
- D. Setup VPC peering for the VPCs of Finance and HR as well as between the VPCs of Finance and Admin.

정답：D

설명：
A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. It enables the user to launch AWS resources into a virtual network that the user has defined. A VPC peering connection allows the user to route traffic between the peer VPCs using private IP addresses as if they are a part of the same network. This is helpful when one VPC from the same or different AWS account wants to connect with resources of the other VPC.
