## EPIC EDI101 Bridges Interfaces Questions and Answers

Does every HL7 message have to be encoded with the characters 1A-@?

ANSWER: No, the encoding characters can be any printable character.

Imagine that your message begins with MSH|^|~1. How would you encode the string "The result is positive & has a value of 2.7 x 10^3.7"?

ANSWER: The result is positive \T\ has a value of 2.7 x 10^S\3.

Why is the NTE segment special?

ANSWER: Context; its meaning depends on the segment it follows

What is the difference between receiving an empty field |I and the delete sequence?

ANSWER: An empty field is ignored by the interface, whereas the delete character will delete information from the database, assuming the field in question supports the delete character.

Aside from HL7 Version 2, name two other standards supported in Bridges?

ANSWER: X12, FHIR, NCPDP, DICOM, and Direct.

What is Bridges?

ANSWER: Epic's interfacing messages along with the application. It consists of both the interface infrastructure to build, send, receive, and file messages along with the tools and utilities to maintain those interfaces

What are stored in the Event Queue, Data Queue, and Control Queue?

ANSWER: The Event Queue contains the information needed to build a message. Usually this is a patient ID, an encounter DAT, and the type of message to be built, amongst other information.

The Data Queue contains the text of HL7 messages and additional metadata.  
The Control Queue is a to-do list of message numbers to send or file.

Are messages ever manually deleted from the Data Queue?

ANSWER: No, never. They are purged only by an automated purge job.

What are two ways that interface messages are sent and received?

Our company has forged a group of professional experts with the excelsior craftsmanship and a mature service system. The quality of our EDI101 latest question is high because our expert team organizes and compiles them according to the real exam's needs and has extracted the essence of all of the information about the test. So our EDI101 Certification tool is the boutique among the same kinds of the EDI101 study materials. Our assiduous pursuit for high quality of our products creates our top-ranking EDI101 test guide and constantly increasing sales volume.

Our CEE: Bridges Interfaces Application Essentials Exam (2026 Version) (EDI101) exam dumps comes in three formats: EPIC EDI101 PDF dumps file, desktop-based practice test software, and a web-based practice exam. These versions are specially designed to make CEE: Bridges Interfaces Application Essentials Exam (2026 Version) (EDI101) preparation for users easier. EDI101 Questions in these formats of RealVCE's material are enough grasp every test topic in the shortest time possible.

## EDI101 Exam Exercise & EDI101 Reliable Braindumps

Not only we provide the most valued EDI101 study materials, but also we offer trustable and sincere after-sales services. As we all know, it's hard to delight every customer. But we have successfully done that. Our EDI101 practice materials are really reliable. In a word, our EDI101 Exam Questions have built good reputation in the market. We sincerely hope that you can try our EDI101 learning quiz. You will surely benefit from your correct choice.

## EPIC CEE: Bridges Interfaces Application Essentials Exam (2026 Version) Sample Questions (Q37-Q42):

### NEW QUESTION # 37

Selecting " Suppress " in the Error Resolution Planner will automatically suppress the related error code for the selected interface.

- A. False
- B. True

**Answer: A**

Explanation:

The Error Resolution Planner is a tool for triaging and planning , not for final configuration. Selecting " Suppress " within the planner indicates an intention or a decision that the error should be suppressed, but the actual administrative suppression must still be configured in the Error Code or Interface records to take effect.

### NEW QUESTION # 38

For which of the following tasks would you use the ID Maintenance activity?

- A. Define new ID Types
- B. Set an outgoing default mapping
- C. Add an Identity ID to a record
- D. Specify the table to use for mapping

**Answer: C**

Explanation:

The ID Maintenance activity is a record-level tool used by analysts to manage specific identifiers for individual records. If a patient or provider has an incorrect external ID or is missing one necessary for interface communication, an administrator uses this activity to manually add, edit, or delete an Identity ID for that specific record. Defining new ID types (Option B) or configuring global mapping tables (Option D) are high-level configuration tasks performed in different administrative activities, not in the individual ID Maintenance tool.

### NEW QUESTION # 39

Which property is used to group individual errors by a shared root cause?

- A. Error Scope
- B. Error Suppression
- C. Error Severity
- D. Error Code

**Answer: D**

Explanation:

The Error Code is a unique identifier assigned to a specific type of failure (e.g., " Patient Not Found ").

Because every instance of that specific failure across multiple messages will share the same code, it serves as the primary property for grouping errors to identify systemic issues or root causes.

### NEW QUESTION # 40

Which interfaces can perform Patient Validation? (Select the most complete answer)

- A. All outgoing patient-based interfaces
- B. Incoming results interfaces
- C. All incoming patient-based interfaces
- D. Only incoming interfaces that can create patients

**Answer: C**

Explanation:

Patient Validation is a protective step taken during the filing process for all incoming patient-based interfaces . Whether the interface is handling admissions (ADT), clinical results (ORU), or pharmacy orders (RDE), the system must verify that the patient identified by

the ID matches the demographic data in the message before any data is written to Chronicles.

#### NEW QUESTION # 41

When triaging an error, what are the error buckets you might place an error in? (SELECT ALL THAT APPLY)

- A. Suppress
- B. Work
- C. Ignore
- D. Purge
- E. Fix

**Answer: B,C,E**

Explanation:

When using the Error Resolution Planner or triaging logs, analysts categorize errors into three main "buckets" to define the workflow: Fix (the data or configuration needs to be corrected), Ignore (the error is expected or harmless and requires no action), and Work (the error requires further investigation or manual intervention). While "Suppress" is a configuration action and "Purge" is a maintenance task, they are not considered the standard triage buckets for active error management.

#### NEW QUESTION # 42

.....

Consider sitting for an CEE: Bridges Interfaces Application Essentials Exam (2026 Version) exam and discovering that the practice materials you've been using are incorrect and useless. The technical staff at RealVCE has gone through the EPIC certification process and knows the need to be realistic and exact.
