Professional Microsoft Dynamics 365 Business Central Developer Study Questions are Best Exam Tool for Your MB-820 Exam

As the development of the science and technology is fast, so the information of the MB-820 exam materials changes fast accordingly. The updated version of the MB-820 study guide will be different from the old version. Some details will be perfected and the system will be updated. You will enjoy learning on our MB-820 Exam Questions for its wonderful and latest design with the latest technologies applied.

Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	• Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
Topic 2	• Describe Business Central: Describing the components and capabilities of Business Central, and describing the core solution and extensions approach for Business Central are focal points of this topic. It also explains the difference between Business Central Online and Business Central on-premises features.
Topic 3	• Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.

Topic 4	• Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.
Topic 5	• Install, develop, and deploy for Business Central: It delves into the installation and configuration of a Business Central development environment. Moreover, it discusses creating, debugging, and deploying an extension in Business Central.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q96-Q101):

NEW QUESTION # 96
Which types of expressions are commonly used in AL? (Choose Two)

- A. Conditional expressions
- B. Lambda expressions
- C. Mathematical expressions
- D. HTML expressions

Answer: A,C

NEW QUESTION # 97
You need to define the tables used for the non-conformity entity.
What should you use?

- A. document table to introduce the non-conformity entities
- B. document history table to introduce the non-conformity entities
- C. supplemental table to introduce the non-conformity lines

Answer: A

Explanation:
* Table Structure in Business Central: When creating entities such as "non-conformity" entities in Business Central, you use document tables to represent entities that have a header and line structure. In this case, the non-conformity entity has:
* A header with common information (Non-conformity Number, Date, Vendor No., etc.).
* One or more lines representing the detailed information for each non-conforming item.
* Document Table Usage:
* Document Table: A document table is the correct table type for scenarios where you have a header (with general information like vendor details) and lines (with detailed, item-specific information).
* Document tables are typically used for entities such as Sales Orders, Purchase Orders, or any other transactional data where you have both header and line information.
* Supplemental Table (Option C):
* Supplemental tables are usually used to add supplementary information to existing data in Business Central. In this case, we need to store detailed line information, which is a core part of the entity rather than supplementary data, so a supplemental table would not be appropriate here.
* Document History Table (Option A):
* Document history tables are used to track changes and historical data for entities but are not suitable for the main introduction of the entity and its lines. This option is also not appropriate.
Reference Documentation:
* Introduction to Business Central Tables
* Document Tables in Business Central

NEW QUESTION # 98
A company plans to meet new regulatory requirements.
The regulator has issued new tax tiers.
You need to update the base application table by using a table extension.
Which table field property can you change?

- A. AutoFormatType
- B. CalcFormula
- C. DecimalPlaces
- D. BlankZero

Answer: C

Explanation:
When updating the base application table using a table extension in Microsoft Dynamics 365 Business Central, certain properties of table fields can be modified to meet new requirements, such as regulatory changes. The DecimalPlaces property (B) is one such property that can be adjusted in a table extension. This property determines the number of decimal places that are displayed and stored for decimal fields in the table.
Adjusting the DecimalPlaces property can be particularly useful when dealing with financial data and tax calculations that require precision to meet new tax tiers set by a regulator. It's important to note that not all properties can be modified in a table extension; for example, the CalcFormula property (A) cannot be changed as it affects how the field's value is calculated, which could have significant implications on the base application's logic.

NEW QUESTION # 99
You need to create the API page according to the requirements.
How should you complete the code segment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Code segment for API page

```
                    page 50100 ItemAPI
{
    PageType = API;
    Caption = 'ItemApi';
    APIPublisher = 'contoso';
    APIGroup = 'sales';
    APIVersion = 'v1.0';
    EntityName = 'item';
    EntitySetName = 'items';
    SourceTable = Item;
ODataKeyFields = SystemId;

    ┌──────────────────────────────────────────┐ ▼
    │ InsertAllowed = false;                    │
    │ DelayedInsert = true;                     │
    │ DataAccessIntent = ReadOnly;              │
    ├──────────────────────────────────────────┤ ▼
    │ ModifyAllowed = false;                    │
    │ Editable = false;                         │
    │ UsageCategory = Lists;                    │
    └──────────────────────────────────────────┘

    layout
    {
        area(Content)
        {
            repeater(GroupName)
            {
                field(no; Rec."No.")
                {
                }
                field(description; Rec.Description)
                {
                }
                field(salesTotal; Rec."Sales (LCY)")
                {
                }
            }
        }
    }
}
```

Answer:

Explanation:

Code segment for API page

```
                page 50100 ItemAPI
        {
            PageType = API;
            Caption = 'ItemApi';
            APIPublisher = 'contoso';
            APIGroup = 'sales';
            APIVersion = 'v1.0';
            EntityName = 'item';
            EntitySetName = 'items';
            SourceTable = Item;
        ODataKeyFields = SystemId;

                             }
                         }
                    }
```
NEW QUESTION # 100
You plan to call a web service by using the data type HttpClient from a Business Central AL extension You must provide the
following implementation for the web service call:
* The web service must authenticate the client with a certificate.
* The certificate must include a password.
* The password must be hidden when you debug the code
You need to include the certificate in the web service call. Which instruction should you use?

- A. Httpclient.Addeertifieate(Certifieate: Blob, Password: secretText);
- B. HttpClient.AddCertificate{Certifkate: SecretText, Password: SecretText);
- C. HttpClient.AddCertificate{Password: SecreTiext);
- D. Httpclient.Addertifieate(certificate: Text, Password: Text);

Answer: B

Explanation:
ou plan to call a web service using HttpClient from a Business Central AL extension. The web service must authenticate using a
certificate that includes a password, and the password must be hidden during debugging.
Options Explanation:
* The question asks for the correct implementation where the certificate and password are provided and where the password is
hidden when debugging.
* SecretText is a special data type in Business Central that hides sensitive data (like passwords) during debugging.

NEW QUESTION # 101

......

In this knowledge-dominated world, the combination of the knowledge and the practical working competences has been paid high attention to is extremely important. If you want to improve your practical abilities you can attend the MB-820 certificate examination. Passing the MB-820 Certification can prove that you boost both the practical abilities and the knowledge and if you buy our MB-820 latest question you will pass the MB-820 exam smoothly.
