ISACA CCOA 시험요강:

주제	소개
주제 1	• Technology Essentials: This section of the exam measures skills of a Cybersecurity Specialist and covers the foundational technologies and principles that form the backbone of cybersecurity. It includes topics like hardware and software configurations, network protocols, cloud infrastructure, and essential tools. The focus is on understanding the technical landscape and how these elements interconnect to ensure secure operations.

주제 2	• Securing Assets: This section of the exam measures skills of a Cybersecurity Specialist and covers the methods and strategies used to secure organizational assets. It includes topics like endpoint security, data protection, encryption techniques, and securing network infrastructure. The goal is to ensure that sensitive information and resources are properly protected from external and internal threats.
주제 3	• Cybersecurity Principles and Risk: This section of the exam measures the skills of a Cybersecurity Specialist and covers core cybersecurity principles and risk management strategies. It includes assessing vulnerabilities, threat analysis, and understanding regulatory compliance frameworks. The section emphasizes evaluating risks and applying appropriate measures to mitigate potential threats to organizational assets.
주제 4	• Incident Detection and Response: This section of the exam measures the skills of a Cybersecurity Analyst and focuses on detecting security incidents and responding appropriately. It includes understanding security monitoring tools, analyzing logs, and identifying indicators of compromise. The section emphasizes how to react to security breaches quickly and efficiently to minimize damage and restore operations.
주제 5	• Adversarial Tactics, Techniques, and Procedures: This section of the exam measures the skills of a Cybersecurity Analyst and covers the tactics, techniques, and procedures used by adversaries to compromise systems. It includes identifying methods of attack, such as phishing, malware, and social engineering, and understanding how these techniques can be detected and thwarted.

최신 Cybersecurity Audit CCOA 무료샘플문제 (Q94-Q99):

질문 # 94
What is the GREATEST security concern associated with virtual (nation technology?

- A. Missing patch management for the technology
- B. Insufficient isolation between virtual machines (VMs)
- C. Inadequate resource allocation
- D. Shared network access

정답：B

설명：
The greatest security concern associated withvirtualization technologyis theinsufficient isolation between VMs.
* VM Escape:An attacker can break out of a compromised VM to access the host or other VMs on the same hypervisor.
* Shared Resources:Hypervisors manage multiple VMs on the same hardware, making it critical to maintain strong isolation.
* Hypervisor Vulnerabilities:A flaw in the hypervisor can compromise all hosted VMs.
* Side-Channel Attacks:Attackers can exploit shared CPU cache to leak information between VMs.
Incorrect Options:
* A. Inadequate resource allocation:A performance issue, not a primary security risk.
* C. Shared network access:Can be managed with proper network segmentation and VLANs.
* D. Missing patch management:While important, it is not unique to virtualization.
Exact Extract from CCOA Official Review Manual, 1st Edition:
Refer to Chapter 6, Section "Virtualization Security," Subsection "Risks and Threats" - Insufficient VM isolation is a critical concern in virtual environments.

질문 # 95

Which of the following is the BEST method of logical network segmentation?

- A. Encryption and tunneling
- B. IP address filtering and access control list (ACL)
- C. Virtual local area network (VLAN) tagging and isolation
- D. Physical separation of network devices

정답：C

설명：
VLAN tagging and isolationis the best method forlogical network segmentationbecause:
* Network Segmentation:VLANs logically separate network traffic within the same physical infrastructure.
* Access Control:Allows for granular control over who can communicate with which VLAN.
* Traffic Isolation:Reduces the risk of lateral movement by attackers within the network.
* Efficiency:More practical and scalable than physical separation.
Incorrect Options:
* A. Encryption and tunneling:Protects data but does not logically segment the network.
* B. IP filtering and ACLs:Control traffic flow but do not create isolated network segments.
* D. Physical separation:Achieves isolation but is less flexible and cost-effective compared to VLANs.
Exact Extract fromCCOA Official Review Manual, 1st Edition:
Refer to Chapter 5, Section "Network Segmentation Techniques," Subsection "VLAN Implementation" - VLANs are the most efficient way to achieve logical separation and isolation.

질문 # 96
Cyber threat intelligence is MOST important for:

- A. configuring SIEM systems and endpoints.
- B. revealing adversarial tactics, techniques, and procedures.
- C. performing root cause analysis for cyber attacks.
- D. recommending best practices for database security.

정답：B

설명：
Cyber Threat Intelligence (CTI)is primarily focused onunderstanding the tactics, techniques, and procedures (TTPs)used by adversaries. The goal is to gain insights into:
* Attack Patterns:How cybercriminals or threat actors operate.
* Indicators of Compromise (IOCs):Data related to attacks, such as IP addresses or domain names.
* Threat Actor Profiles:Understanding motives and methods.
* Operational Threat Hunting:Using intelligence to proactively search for threats in an environment.
* Decision Support:Assisting SOC teams and management in making informed security decisions.
Other options analysis:
* A. Performing root cause analysis for cyber attacks:While CTI can inform such analysis, it is not the primary purpose.
* B. Configuring SIEM systems and endpoints:CTI cansupportconfiguration, but that is not its main function.
* C. Recommending best practices for database security:CTI is more focused on threat analysis rather than specific security configurations.
CCOA Official Review Manual, 1st Edition References:
* Chapter 6: Threat Intelligence and Analysis:Explains how CTI is used to reveal adversarial TTPs.
* Chapter 9: Threat Intelligence in Incident Response:Highlights how CTI helps identify emerging threats.

질문 # 97
Most of the operational responsibility remains with the customerin which of the following cloudservice models?

- A. Infrastructure as a Service (IaaS)
- B. Platform as a Service (PaaS)
- C. Data Platform as a Service (DPaaS)
- D. Software as a Service (SaaS)

정답：A

설명：

In theIaaS (Infrastructure as a Service)model, the majority of operational responsibilities remain with the customer.
* Customer Responsibilities:OS management, application updates, security configuration, data protection, and network controls.
* Provider Responsibilities:Hardware maintenance, virtualization, and network infrastructure.
* Flexibility:Customers have significant control over the operating environment, making them responsible for most security measures.
Incorrect Options:
* A. Data Platform as a Service (DPaaS):Managed data services where the provider handles database infrastructure.
* B. Software as a Service (SaaS):Provider manages almost all operational aspects.
* C. Platform as a Service (PaaS):Provider manages the platform; customers focus on application management.
Exact Extract from CCOA Official Review Manual, 1st Edition:
Refer to Chapter 3, Section "Cloud Service Models," Subsection "IaaS Responsibilities" - IaaS requires customers to manage most operational aspects, unlike PaaS or SaaS.

질문 # 98

Which of the following controls would BEST prevent an attacker from accessing sensitive data from files or disk images that have been obtained either physically or via the network?

- A. Data loss prevention (DLP)
- B. Next generation antivirus
- C. Endpoint detection and response (EOR)
- D. Encryption of data at rest

정답：D

설명：

Encryption of data at restis the best control to protectsensitive data from unauthorized access, even if physical or network access to the disk or file is obtained.
* Protection:Data remains unreadable without the proper encryption keys.
* Scenarios:Protects data from theft due to lost devices or compromised servers.
* Compliance:Often mandated by regulations (e.g., GDPR, HIPAA).
Incorrect Options:
* A. Next-generation antivirus:Detects malware, not data protection.
* B. Data loss prevention (DLP):Prevents data exfiltration but does not protect data at rest.
* C. Endpoint detection and response (EDR):Monitors suspicious activity but does not secure stored data.
Exact Extract from CCOA Official Review Manual, 1st Edition:
Refer to Chapter 6, Section "Data Security Strategies," Subsection "Encryption Techniques" - Encryption of data at rest is essential for protecting sensitive information.
