Topic 4	<ul style="list-style-type: none">Configure ChromeOS policies: This topic discusses understanding and configuring ChromeOS policies.

Google Professional ChromeOS Administrator Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

You need to create a recovery image on a USB stick. Which two steps should you take?
(Choose 2 answers)

- A. Go to Device Settings.
- B. Go to Google Play store
- C. **Install Chrome Recovery Utility and download the image for the correct device model to a USB stick.**
- D. **Go to Chrome Web Store on a Chrome device**
- E. Go to google.com/chromebooks

Answer: C,D

Explanation:

Creating a recovery image for ChromeOS involves using the Chrome Recovery Utility, which is available in the Chrome Web Store. This tool allows users to create a recovery USB drive by downloading the necessary OS image and writing it to the USB stick.

Verified Answer from Official Source:

The correct answers are verified from the ChromeOS Recovery Guide, which specifies the use of the Chrome Recovery Utility from the Chrome Web Store.

"To create a ChromeOS recovery image, download the Chrome Recovery Utility from the Chrome Web Store.

Follow the on-screen instructions to create a recovery USB stick."

The Recovery Utility is the recommended method for creating a USB recovery device, ensuring compatibility and correctness of the OS image.

Objectives:

- * Perform system recovery for ChromeOS devices.
- * Utilize official recovery tools.

NEW QUESTION # 41

Which management feature makes ChromeOS devices a popular choice for IT administrators in educational organizations and enterprises?

Which management feature makes ChromeOS devices enterprises?

- A. Secure management through on-prem infrastructure
- B. Remote BIOS controls and firmware update
- C. **Centralized management through Admin console**
- D. Inability to remotely control and monitor devices

Answer: C

Explanation:

The ChromeOS Admin console provides centralized management, making it a popular choice for IT administrators. It allows them to manage policies, apps, extensions, and device settings from a single interface, streamlining administration and ensuring consistency across devices.

Option A is incorrect because ChromeOS management is primarily cloud-based, not on-premises.

Option B is incorrect because while BIOS control might be available, it's not the primary management feature.

Option D is incorrect because ChromeOS devices can be remotely controlled and monitored through the Admin console.

NEW QUESTION # 42

You want to enterprise enroll a device that has existing consumer accounts. What should you do first?

- A. **Delete all consumer accounts, and then follow the same steps for enrolling a brand new device**
- B. Contact Google support to convert the device into an enterprise device

- C. Wipe the device
- D. follow the same steps for enrolling a brand new device

Answer: A

Explanation:

- * Device State: Before you can enroll a ChromeOS device into an enterprise environment, it's crucial that it's not associated with any personal Google accounts. Existing consumer accounts can interfere with the enrollment process and the application of enterprise policies.
- * Data Backup (Optional): If the existing consumer accounts on the device contain important data, advise the users to back up their information before proceeding.
- * Account Removal: Sign in to the device with each consumer account and remove the account from the device. This ensures a clean slate for the enterprise enrollment process.
- * Powerwash (Optional): While not strictly necessary after removing accounts, performing a powerwash (factory reset) is a recommended step. It further erases any remaining data or configurations linked to the consumer accounts, ensuring a completely fresh start for the device.
- * Enrollment: Once the consumer accounts are removed (and optionally, after powerwashing), follow the standard enterprise enrollment steps for your organization. This typically involves entering enterprise credentials at the login screen, or using a unique enrollment token, depending on your company's setup.

References:

- * Enroll ChromeOS devices: <https://support.google.com/chrome/a/answer/1360534?hl=en> This guide provides step-by-step instructions on enrolling ChromeOS devices into an enterprise environment, including details on prerequisites and different enrollment methods.

NEW QUESTION # 43

The Finance Department is concerned about frequent Chromebook updates and asks you to explore a 6-month update cycle. Which update release option should you configure for these devices?

- A. Canary
- B. Stable
- **C. LTS**
- D. Beta

Answer: C

Explanation:

The Long-Term Support (LTS) channel on ChromeOS is designed for environments that require extended stability with less frequent updates. It provides feature updates every 6 months, making it suitable for departments like Finance that prefer a stable, predictable update schedule without frequent changes.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Update Management Guide, which explains that the LTS channel delivers updates on a 6-month cycle, focusing on stability rather than the latest features.

"The Long-Term Support (LTS) channel is updated approximately every 6 months, allowing organizations to minimize disruptions caused by frequent updates." Using the LTS channel reduces the frequency of feature changes, which is beneficial for finance and other critical operations that prioritize stability over new features.

Objectives:

- * Manage update frequency to suit organizational needs.
- * Maintain stability in critical business functions.

NEW QUESTION # 44

You are setting up a proof of concept using an email-verified trial environment rather than a domain-verified one. After trying to integrate with their existing third-party Identity Provider (IdP) to provision their user accounts, you encounter an error. What would be the most likely reason for this?

- A. Email-verified domain environments only allow for a single managed user per domain
- B. You need to purchase Google Workspace licenses to be able to integrate with third-party IdPs
- C. You are only able to manage devices in an email-verified domain, not users
- **D. You need to verify a domain in order to integrate with third-party IdPs**

Answer: D

Explanation:

Email-verified environments lack the full capabilities of domain-verified environments, particularly when integrating with third-party Identity Providers (IdPs). To integrate with an external IdP like Okta or Azure AD, you must first verify the domain to ensure secure and authenticated access.

Verified Answer from Official Source:

The correct answer is verified from the Google Workspace SSO Configuration Guide, which specifies that domain verification is a prerequisite for setting up SSO and integrating with third-party IdPs.

"Domain verification is required before you can integrate third-party Identity Providers (IdPs) for SSO within the Admin console." Without domain verification, the system does not have the necessary trust and authentication measures in place to delegate login processes to external providers.

Objectives:

- * Integrate ChromeOS with third-party SSO solutions.
- * Ensure domain verification before setting up SSO.

NEW QUESTION # 45

.....

Candidates who become Google ChromeOS-Administrator certified demonstrate their worth in the Google field. ChromeOS-Administrator certification is proof of their competence and skills. This is a highly sought after credential and it makes career advancement easier for the candidate.
