BraindumpsPrep has made the CISM exam dumps after consulting with professionals and getting positive feedback from customers. The team of BraindumpsPrep has worked hard in making this product a successful ISACA CISM Study Material. So we guarantee that you will not face issues anymore in passing the ISACA CISM certification test with good grades.

The CISM certification is a valuable asset for professionals who are looking to advance their career in information security management. It demonstrates to employers that the individual possesses the necessary skills and knowledge to effectively manage the security of an organization's information assets. Certified Information Security Manager certification is also recognized by government agencies, financial institutions, and other organizations as a benchmark for measuring the competency of their security professionals.

The CISM exam consists of 150 multiple-choice questions that cover four key domains: Information Security Governance, Risk Management, Information Security Program Development and Management, and Information Security Incident Management. Candidates are required to have a minimum of five years of experience in information security, with at least three years of experience in the role of information security manager. In addition to passing the exam, candidates must adhere to the ISACA Code of Professional Ethics and maintain continuing education requirements to maintain their certification. The CISM Certification is an excellent option for individuals seeking to advance their careers in the field of information security management.

The CISM certification exam is designed to help professionals demonstrate their expertise and knowledge in information security management to potential employers and clients. Certified Information Security Manager certification provides professionals with a competitive edge in the job market and helps them stand out from other candidates. Furthermore, the CISM certification is recognized by many organizations, including government agencies, as a standard for information security management professionals.

### ISACA Certified Information Security Manager Sample Questions (Q417-Q422):

#### NEW QUESTION # 417

Of the following, which is the MOST important aspect of forensic investigations?

- A. Timely intervention
- B. Identifying the perpetrator
- C. Chain of custody
- D. The independence of the investigator

**Answer: C**

Explanation:

Section: INCIDENT MANAGEMENT AND RESPONSE

Explanation:

Establishing the chain of custody is one of the most important steps in conducting forensic investigations since it preserves the evidence in a manner that is admissible in court. The independence of the investigator may be important, but is not the most important aspect. Timely intervention is important for containing incidents, but not as important for forensic investigation. Identifying the perpetrator is important, but maintaining the chain of custody is more important in order to have the perpetrator convicted in court.

#### NEW QUESTION # 418

An organization has outsourced many application development activities to a third party that uses contract programmers extensively. Which of the following would provide the BEST assurance that the third party's contract programmers comply with the organization's security policies?

- A. Perform periodic security assessments of the contractors' activities.
- B. Require annual signed agreements of adherence to security policies.
- C. Conduct periodic vulnerability scans of the application.
- D. Include penalties for noncompliance in the contracting agreement.

**Answer: A**

Explanation:

Section: INCIDENT MANAGEMENT AND RESPONSE

#### NEW QUESTION # 419

The systems administrator did not immediately notify the security officer about a malicious attack. An information security manager could prevent this situation by:

- A. periodically testing the incident response plans.
- B. regularly testing the intrusion detection system (IDS).
- C. periodically reviewing incident response procedures.
- D. establishing mandatory training of all personnel.

**Answer: A**

Explanation:

Explanation

Security incident response plans should be tested to find any deficiencies and improve existing processes.

Testing the intrusion detection system (IDS) is a good practice but would not have prevented this situation. All personnel need to go through formal training to ensure that they understand the process, tools and methodology involved in handling security incidents.

However, testing of the actual plans is more effective in ensuring the process works as intended. Reviewing the response procedures is not enough; the security response plan needs to be tested on a regular basis.

#### NEW QUESTION # 420

Which of the following is the GREATEST challenge with assessing emerging risk in an organization?

- A. Lack of a risk framework
- B. Ineffective security controls
- C. Incomplete identification of threats
- D. Presence of known vulnerabilities

Answer: C

Explanation:

The greatest challenge with assessing emerging risk in an organization is the incomplete identification of threats, as emerging risks are often new, unknown, or unfamiliar, and may not be fully understood or assessed. Incomplete identification of threats can lead to gaps in risk analysis and management, and expose the organization to unexpected or unprepared scenarios. The other options, such as lack of a risk framework, ineffective security controls, or presence of known vulnerabilities, are not specific to emerging risks, and may apply to any type of risk assessment. #### NEW QUESTION # 421

Which of the following is MOST important for measuring the effectiveness of a security awareness program?

- A. Increased number of security violation reports
- B. Increased interest in focus groups on security issues
- C. A quantitative evaluation to ensure user comprehension
- D. Reduced number of security violation reports

Answer: C

Explanation:

To truly judge the effectiveness of security awareness training, some means of measurable testing is necessary to confirm user comprehension. Focus groups may or may not provide meaningful feedback but, in and of themselves, do not provide metrics. An increase or reduction in the number of violation reports may not be indicative of a high level of security awareness.

#### NEW QUESTION # 422

.....

If you are clueless about the oncoming exam, our CISM guide materials are trustworthy materials for your information.
