New Deep-Security-Professional Study Plan | Valid Deep-Security-Professional Test Materials

Exam4PDF Deep-Security-Professional exam dumps in three different formats has Deep-Security-Professional questions PDF and the facility of Trend Deep-Security-Professional dumps. We have made these Trend Deep-Security-Professional questions after counseling a lot of experts and getting their feedback. The 24/7 customer support team is available at Exam4PDF for Trend Deep-Security-Professional Dumps users so that they don't get stuck in any hitch.

Trend Micro Certified Professional for Deep Security Sample Questions (Q43-Q48):

NEW QUESTION # 43
The Intrusion Prevention Protection Module is enabled, but the traffic it is trying to analyze is encrypted through https. How is it possible for the Intrusion Prevention Protection Module to monitor this encrypted traffic against the assigned rules?

- A. The Intrusion Prevention Protection Module is not able to analyze encrypted https traffic.
- B. The Intrusion Prevention Protection Module can analyze https traffic if the public cer-tificate of the originating server is imported into the certificate store on the Deep Secu-rity Agent computer.
- C. The Intrusion Prevention Protection Module can only analyze https traffic originating from other servers hosting a Deep Security Agent.

- D. It is possible to monitor the https traffic by creating an SSL Configuration. Creating a new SSL Configuration will make the key information needed to decrypt the traffic available to the Deep Security Agent.

Answer: D

Explanation:
inrusion-prevention-ssl-traffic

NEW QUESTION # 44
What is the default priority assigned to Firewall rules using the Allow action?

- A. Firewall rules using the Allow action always have a priority of 4.
- B. Firewall rules using the Allow action can be assigned a priority between 0 and 4.
- C. Firewall rules using the Allow action always have a priority of 0.
- D. Firewall rules using the Allow action can be assigned a priority between 1 and 3.

Answer: C

Explanation:
Firewall_rule_priorities
Explication: Study Guide - page (241)

NEW QUESTION # 45
What is the result of performing a Reset operation on a Deep Security Agent?

- A. A Reset operation wipes out any Deep Security Agent settings, including its relationship with Deep Security Manager.
- B. A Reset operation generates Event information that can be used to troubleshoot Agent-to -Manager communication issues.
- C. A Reset operation forces an update to the Deep Security Agent software installed on a managed computer.
- D. A Reset operation forces the Deep Security Agent service to restart on the managed computer.

Answer: A

Explanation:
A Reset operation in Deep Security Manager (applied to an agent) removes all configuration and relationship data from the agent, including its activation status, policy assignments, and communication settings. This essentially returns the agent to an "unmanaged" state, so it must be reactivated and reconfigured before resuming protection.
From the official documentation:
"Performing a Reset operation on an agent removes the agent's registration and all local settings, effectively deactivating it from the Deep Security Manager. This is useful if you need to re-register the agent with a different manager, or if there are persistent communication or configuration issues." Option A is incorrect: Although logs may be generated, the main purpose is to sever the relationship and clear settings, not to generate troubleshooting events.
Option B is incorrect: Reset does not force a software update.
Option C is incorrect: Reset is more than a service restart; it erases the agent's configuration and registration.

Deep Security 20 LTS Administrator's Guide: "Resetting an agent will remove its activation and configuration, requiring re-registration."

NEW QUESTION # 46
Which of the following statements is true regarding Deep Security Manager-todatabase com-munication?

- A. Deep Security Manager-to-database traffic is encrypted by default but can be disabled by modifying settings in the db.properties file.
- B. Deep Security Manager-to-database traffic is not encrypted by default, but can be en-abled by modifying settings in the dsm.properties file.
- C. Deep Security Manager-to-database traffic is not encrypted by default, but can be en-abled by modifying settings in the ssl.properties file.
- D. Deep Security Manager-to-database traffic is encrypted by default, but can be disabled by modifying settings in the

dsm.properties file.

Answer: B

NEW QUESTION # 47

A collection of servers protected by Deep Security do not have Internet access. How can Smart Scan be used on these computers.

- A. Smart Scan must contact the Smart Protection Network to function. Any servers without Internet access will be unable to use Smart Scan.
- B. Install a Smart Protection Server in the environment and set it as the source for File Reputation information.
- C. Smart Scan can be configured to use a local pattern file containing the same information as the Smart Protection Network.
- D. Promote one of the Deep Security Agents on the air gapped computers to become a Re-lay.

Answer: B

Explanation:
Agent-airgapped

NEW QUESTION # 48
