CIS - PA PRACTICE TEST

P.S. Free 2026 ServiceNow CIS-PA dumps are available on Google Drive shared by DumpStillValid:
<https://drive.google.com/open?id=1vyzkwC7lzRrlymET9f4b-3Hu0NWB1h6>

The CIS-PA prep torrent we provide will cost you less time and energy. You only need relatively little time to review and prepare. After all, many people who prepare for the CIS-PA exam, either the office workers or the students, are all busy. The office workers are both busy in their jobs and their family life and the students must learn or do other things. But the CIS-PA Test Prep we provide are compiled elaborately and it makes you use less time and energy to learn and provide the study materials of high quality and seizes the focus the exam. It lets you master the most information and costs you the least time and energy.

ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Architecture and Deployment: This domain covers the foundational components of the Performance Analytics solution and the proper deployment sequence in ServiceNow environments.
Topic 2	<ul style="list-style-type: none">Data Collection: This domain explains how Performance Analytics gathers and processes data, including collection flow, configuration properties, and troubleshooting collection issues.
Topic 3	<ul style="list-style-type: none">Data Visualization: This section focuses on presenting data through widgets, interactive filters, appropriate visualizations, dashboards, and analyzing data using Analytics Hub and KPI Details.
Topic 4	<ul style="list-style-type: none">Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.
Topic 5	<ul style="list-style-type: none">Configure Indicators and Indicator Sources: This domain addresses creating and configuring indicators (performance metrics), including source conditions, fact tables, indicator types, properties, and aggregation scripts.

- This section addresses identifying and resolving issues using Spotlight diagnostic tools to monitor system health and performance.

Free CIS-PA Practice Exams - Sample CIS-PA Exam

If you are interested in Soft test engine of CIS-PA practice questions, you should know below information better. Soft test engine should be downloaded in personal computer first time online, and then install. After installment you can use CIS-PA practice questions offline. You can also copy to other electronic products such as Phone, Ipad. On the hand, our exam questions can be used on more than 200 personal computers. If you purchase Soft test engine of CIS-PA Practice Questions for your companies, it will be very useful.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q21-Q26):

NEW QUESTION # 21

What determines the color of the score in a Score widget?

□

- A. Widget settings
- **B. Relationship to the target and the Direction setting of the Indicator**
- C. Field styles on the field used to calculate the Indicator
- D. Chart color defined for the base table

Answer: B

Explanation:

In ServiceNow Platform Analytics, the color of the score displayed in a Score widget is determined by the Indicator's relationship to its target in combination with the Direction setting (Maximize or Minimize) of the Indicator. This behavior is part of the KPI evaluation logic and is consistent across dashboards and KPI Details.

When an indicator has a defined target, Platform Analytics compares the current score against that target.

Based on whether the indicator is configured to maximize (higher is better) or minimize (lower is better), the platform automatically assigns a visual status—such as green (on track), yellow (warning), or red (off track).

This status directly controls the color of the score values shown in the widget.

Chart colors, field styles, or widget-specific settings do not influence the score color. Those options may affect line charts or visual styling, but not KPI status coloring. ServiceNow documentation clearly states that KPI status and score coloring are driven by target evaluation logic, making option A the correct and verified answer.

NEW QUESTION # 22

What should the target for the Index and its supporting indicators be set to when creating an Index Indicator?

- A. 0% and Maximize
- **B. 100% and Maximize**
- C. 100% and Minimize
- D. 0% and Minimize

Answer: B

Explanation:

An Index Indicator in Platform Analytics represents a composite score calculated from multiple supporting indicators. According to ServiceNow best practices, both the Index and its supporting indicators should be normalized so that higher values represent better performance. Therefore, the correct configuration is a target of 100% with a Maximize direction.

This standardization ensures consistent weighting and scoring logic across all contributing indicators. If supporting indicators were set to Minimize or had inconsistent targets, the index calculation would produce misleading or inverted results. Options involving a 0% target are incorrect because index scores are designed to trend toward full achievement, represented as 100%. ServiceNow documentation clearly states that index indicators assume maximization logic for proper normalization and aggregation, making option

D the correct and documented choice.

NEW QUESTION # 23

Which scenarios require the use of scripted Breakdown Mapping?

- A. Categorizing incidents based on their category
- B. Categorizing incidents based on their priority
- C. Categorizing the length of time since tasks were updated into age ranges
- **D. Categorizing requests based on the number of times they were updated**

Answer: D

Explanation:

Scripted Breakdown Mappings are required when the breakdown value cannot be obtained through a direct field mapping or simple reference relationship. Categorizing requests based on the number of times they were updated requires calculating a value dynamically (for example, counting updates from the audit history), which is not stored as a single field on the record. Because this value must be derived programmatically, a scripted mapping is necessary.

Options B and C use existing fields (category, priority) that can be mapped directly without scripting. Option D uses age ranges, which are handled through Bucket Groups and the `pa_bucket` table, not scripted mappings.

ServiceNow documentation clearly states that scripted mappings are intended for calculated, derived, or indirect values, making option A the correct answer.

NEW QUESTION # 24

When are Additional conditions of an Indicator evaluated during Data Collection?

- A. At the same time as the Indicator Source conditions
- B. When the Indicator is viewed in the Analytics Hub
- **C. After the Indicator Source conditions**
- D. Before the Indicator Source conditions

Answer: C

Explanation:

During data collection, Platform Analytics first applies the Indicator Source conditions to retrieve the base dataset. Once the source data is identified, the system then evaluates the Additional conditions defined on the Indicator itself.

This separation allows indicator-specific filtering without duplicating logic in the indicator source, supporting reuse and performance optimization. Additional conditions do not run in parallel with source conditions and are not evaluated at visualization time.

ServiceNow documentation explicitly explains that Indicator conditions refine the dataset after the source query executes, making option D the correct answer.

NEW QUESTION # 25

Which configuration confirms that an Automated Breakdown is using a Bucket Group?

- A. The Default elements filter of the Breakdown specifies the Bucket Groups
- **B. The Facts table of the Breakdown Source is set to `[pa_buckets]`**
- C. The Facts table of the Breakdown is set to `[pa_buckets]`
- D. The Related list conditions of the Breakdown Source identify the Bucket Groups

Answer: B

Explanation:

An Automated Breakdown is confirmed to be using a Bucket Group when the Facts table of the Breakdown Source is set to `[pa_buckets]`. Bucket Groups define how numeric or duration values are grouped, but the actual bucketed analytics data is stored in the `pa_bucket` table during data collection.

The Breakdown Source is responsible for defining where the breakdown facts originate. If its Facts table is `pa_buckets`, this indicates that the breakdown is based on bucketed values generated by a Bucket Group. The Breakdown record itself does not define the facts table, and default element filters or related list conditions do not establish the use of bucket data.

ServiceNow Platform Analytics documentation clearly states that all bucket-based breakdowns must reference `pa_buckets` at the

Breakdown Source level, making option C the correct and definitive answer.

NEW QUESTION # 26

.....

For added reassurance, we also provide you with up to 1 year of free ServiceNow Dumps updates and a free demo version of the actual product so that you can verify its validity before purchasing. The key to passing the ServiceNow CIS-PA exam on the first try is vigorous Certified Implementation Specialist - Platform Analytics (CIS-PA) practice. And that's exactly what you'll get when you prepare from our Certified Implementation Specialist - Platform Analytics (CIS-PA) practice material. Each format of our CIS-PA study material excels in its own way and serves to improve your skills and gives you an inside-out understanding of each exam topic.
