

# Reliable DP-203 Latest Test Experience offer you accurate Valid Examcollection | Microsoft Data Engineering on Microsoft Azure

2026 Latest PassReview DP-203 PDF Dumps and DP-203 Exam Engine Free Share: [https://drive.google.com/open?id=1gR7Zqlg4v\\_j-eZLqFjv2uUZLfF2-aqU](https://drive.google.com/open?id=1gR7Zqlg4v_j-eZLqFjv2uUZLfF2-aqU)

We believe that one of the most important things you care about is the quality of our DP-203 exam materials, but we can ensure that the quality of it won't let you down. Many candidates are interested in our DP-203 exam materials. What you can set your mind at rest is that the DP-203 exam materials are very high quality. DP-203 exam materials draw up team have a strong expert team to constantly provide you with an effective training resource. They continue to use their rich experience and knowledge to study the real exam questions of the past few years, to draw up such an exam materials for you. In other words, you can never worry about the quality of DP-203 Exam Materials, you will not be disappointed.

Microsoft DP-203 certification exam is a challenging exam that requires extensive preparation and study. Candidates can prepare for the exam by taking online courses, attending training sessions, and studying the official Microsoft DP-203 certification exam guide. DP-203 exam is conducted online and consists of multiple-choice questions and scenario-based questions. Candidates must score a minimum of 700 out of 1000 to pass the exam and earn the Microsoft DP-203 certification.

Microsoft DP-203 (Data Engineering on Microsoft Azure) Exam is a certification exam designed to test the skills and knowledge of data engineers who work with Microsoft Azure. DP-203 exam is intended for professionals who work with data engineering and are interested in using Azure technologies to build and manage data solutions. The DP-203 exam is designed to assess the candidate's ability to design, implement, and maintain data pipelines, data storage, data processing, and data security in Azure.

# DP-203 - Data Engineering on Microsoft Azure High Hit-Rate Latest Test Experience

So, what are you waiting for? Unlock your potential and buy Microsoft DP-203 questions today! Start your journey to a bright future, and join the thousands of students who have already seen success with our Data Engineering on Microsoft Azure (DP-203) practice material. With updated DP-203 Questions, you too can achieve your goals in the Microsoft sector. Take the first step towards your future now and buy Prepare for your Data Engineering on Microsoft Azure (DP-203) study material. You won't regret it!

## Microsoft Data Engineering on Microsoft Azure Sample Questions (Q28-Q33):

### NEW QUESTION # 28

You have an enterprise data warehouse in Azure Synapse Analytics.

Using PolyBase, you create an external table named [Ext].[Items] to query Parquet files stored in Azure Data Lake Storage Gen2 without importing the data to the data warehouse.

The external table has three columns.

You discover that the Parquet files have a fourth column named ItemID.

Which command should you run to add the ItemID column to the external table?

- A. Option A
- B. Option D
- **C. Option C**
- D. Option B

### Answer: C

Explanation:

<https://docs.microsoft.com/en-us/sql/t-sql/statements/create-external-table-transact-sql>

### NEW QUESTION # 29

You have the following Azure Stream Analytics query.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

### Answer:

Explanation:

Explanation:

Box 1: Yes

You can now use a new extension of Azure Stream Analytics SQL to specify the number of partitions of a stream when reshuffling the data.

The outcome is a stream that has the same partition scheme. Please see below for an example:

WITH step1 AS (SELECT \* FROM [input1] PARTITION BY DeviceID INTO 10),

step2 AS (SELECT \* FROM [input2] PARTITION BY DeviceID INTO 10)

SELECT \* INTO [output] FROM step1 PARTITION BY DeviceID UNION step2 PARTITION BY DeviceID Note: The new extension of Azure Stream Analytics SQL includes a keyword INTO that allows you to specify the number of partitions for a stream when performing reshuffling using a PARTITION BY statement.

Box 2: Yes

When joining two streams of data explicitly repartitioned, these streams must have the same partition key and partition count.

Box 3: Yes

10 partitions x six SUs = 60 SUs is fine.

Note: Remember, Streaming Unit (SU) count, which is the unit of scale for Azure Stream Analytics, must be adjusted so the number of physical resources available to the job can fit the partitioned flow. In general, six SUs is a good number to assign to each partition. In case there are insufficient resources assigned to the job, the system will only apply the repartition if it benefits the job.

### NEW QUESTION # 30

You have an Azure subscription.

You plan to build a data warehouse in an Azure Synapse Analytics dedicated SQL pool named pool1 that will contain staging tables and a dimensional model Pool1 will contain the following tables.

**Answer:**

Explanation:

### NEW QUESTION # 31

You are responsible for providing access to an Azure Data Lake Storage Gen2 account.

Your user account has contributor access to the storage account, and you have the application ID and access key.

You plan to use PolyBase to load data into an enterprise data warehouse in Azure Synapse Analytics.

You need to configure PolyBase to connect the data warehouse to storage account.

Which three components should you create in sequence? To answer, move the appropriate components from the list of components to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

Explanation

### NEW QUESTION # 32

You have an Azure Data Lake Storage Gen2 account that contains a JSON file for customers. The file contains two attributes named FirstName and LastName.

You need to copy the data from the JSON file to an Azure Synapse Analytics table by using Azure Databricks.

A new column must be created that concatenates the FirstName and LastName values.

You create the following components:

- \* A destination table in Azure Synapse
- \* An Azure Blob storage container
- \* A service principal

In which order should you perform the actions? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

Explanation

Table Description automatically generated

Step 1: Mount the Data Lake Storage onto DBFS

Begin with creating a file system in the Azure Data Lake Storage Gen2 account.

Step 2: Read the file into a data frame.

You can load the json files as a data frame in Azure Databricks.

Step 3: Perform transformations on the data frame.

Step 4: Specify a temporary folder to stage the data

Specify a temporary folder to use while moving data between Azure Databricks and Azure Synapse.

Step 5: Write the results to a table in Azure Synapse.

You upload the transformed data frame into Azure Synapse. You use the Azure Synapse connector for Azure Databricks to directly upload a data frame as a table in a Azure Synapse.
