UiPath Certified Professional Automation Business Analyst Professional v1.0 UiPath-ABAv1 Prüfungsfragen mit Lösungen (Q74-Q79):

74. Frage

As a business analyst, how would you organize the testing effort in UiPath Test Manager?

- A. Create a testing project for each test case in an RPA project.
- B. Create a testing project for each workflow in an RPA project.
- C. Create a testing project for each RPA project.
- D. Create a testing project for each test result in an RPA project.

Antwort: C

Begründung:

Organizing Testing Efforts in UiPath Test Manager:

A testing project in UiPath Test Manager is typically created for each RPA project to streamline test management and maintain alignment with the overall automation lifecycle.

Why Option D is Correct:

Grouping tests under a single project for an RPA initiative ensures all test cases, scenarios, and results are organized centrally.

Why Other Options Are Incorrect:

Option A/B/C: Organizing test efforts by individual test results, workflows, or cases would lead to fragmented and inefficient management.

75. Frage

What is the purpose of using the Test Cases template to create test case scenarios?

- A. To develop a clear and concise test plan
- B. To identify potential defects in the system being tested
- C. To automate the execution of test cases
- **D. To provide a standardized format for documenting and organizing test cases**

Antwort: D

Begründung:

The purpose of using the Test Cases template in UiPath is to provide a standardized format for documenting and organizing test cases. These templates serve as base models for test cases and can include data variations to be reused in different tests. They are particularly useful in Test Automation projects, where they can help ensure consistency and efficiency in the creation and execution of test cases. The templates can include other file types such as Global Exception Handler, and they are specific to the project type and the language used to create them.

References: The explanation is based on the UiPath Documentation Portal's information on the use of test case templates in Studio and Test Automation projects.

76. Frage

For what kind of documents is the ML approach recommended?

- A. Unstructured or fixed-form documents in which layouts of different documents vary greatly
- B. Unstructured or fixed-form documents in which layouts of different documents are exactly the same
- **C. Unstructured or semi-structured documents in which layouts of different documents vary greatly**
- D. Structured or semi-structured documents in which layouts of different documents are exactly the same

Antwort: C

Begründung:

The Machine Learning (ML) approach in UiPath Document Understanding is particularly recommended for dealing with unstructured or semi-structured documents where the layouts vary significantly between different document providers. The ML models are designed to learn and infer values for targeted fields, even from documents with layouts they have not encountered before. This makes the ML approach suitable for scenarios where documents do not follow a consistent text or layout pattern.

References: The recommendation for using the ML approach with unstructured or semi-structured documents is detailed in UiPath's official documentation on the Machine Learning Extractor.

77. Frage

Which of the below options best applies to the role of the Business Analyst?

- A. Assists in solution design and confirms the solution
- B. Translates the business problem into a technology problem
- **C. Bridges the gap between the stakeholders and the delivery team**
- D. Understands the business requirements and the problem

Antwort: C

Begründung:

The role of the Business Analyst best applies to bridging the gap between the stakeholders and the delivery team. This involves understanding and translating business requirements into actionable and understandable tasks for the technical team, ensuring that the automation solutions meet the business needs effectively. 78. Frage

When prioritizing the processes to be automated based on the Automation Quadrant, what is a process with LOW complexity & HIGH benefit considered?

- A. Long-term improvement
- B. Low hanging fruit
- C. Must-do improvement
- D. Quick win

Antwort: D

Begründung:

In the Automation Quadrant used for prioritizing processes for automation, a process that is characterized by LOW complexity and HIGH benefit is considered a 'Quick win'. This term is used to describe a process that can be automated easily and will deliver significant benefits quickly.
