# Evaluate Your Exam Preparation with Online CrowdStrike IDP Practice Test Engine

Our IDP real quiz boosts 3 versions: the PDF, Software and APP online. Though the content of these three versions is the same, but the displays of them are with varied functions to make you learn comprehensively and efficiently. The learning of our IDP Study Materials costs you little time and energy and we update them frequently. To understand our IDP learning questions in detail please look at the introduction of our product on the webiste pages.

Research has found that stimulating interest in learning may be the best solution. Therefore, the IDP prepare guide' focus is to reform the rigid and useless memory mode by changing the way in which the IDP exams are prepared. Our Soft version of IDP practice materials combine knowledge with the latest technology to greatly stimulate your learning power. By simulating enjoyable learning scenes and vivid explanations, users will have greater confidence in passing the qualifying IDP exams.

>> 100% IDP Accuracy <<

Pass Your CrowdStrike IDP Exam with Excellent 100% IDP Accuracy Certainly

Everyone has the right to pursue happiness and wealth. You can rely on the IDP certificate to support yourself. If you do not own one or two kinds of skills, it is difficult for you to make ends meet in the modern society. After all, you can rely on no one but yourself. At present, our IDP Study Materials can give you a ray of hope. Even you have no basic knowledge about the IDP study materials. You still can pass the IDP with the help of our IDP learning guide.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	• User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeytoken accounts.
Topic 2	• Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severity • likelihood • consequence factors, risk prioritization, score reduction, and configuring security goals and scopes.
Topic 3	• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.

Topic 4	• Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles.
Topic 5	• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 6	• Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.
Topic 7	• Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 8	• Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.
Topic 9	• Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42
For false positives, the Detection details can be set to new"Actions"using:

- A. remediations
- B. exits
- C. recommendations
- D. exceptions

Answer: D

Explanation:
When an identity-based detection is determined to be afalse positive, Falcon Identity Protection allows administrators to take corrective action usingexceptions. According to the CCIS curriculum, exceptions are the mechanism by which detections can be suppressed for specific entities or conditions without disabling the detection entirely.
Exceptions are configured from theDetection detailsview and are intended to handle known, acceptable behavior that would otherwise continue to trigger detections. This allows security teams to reduce noise while maintaining visibility into true threats. Exceptions are especially valuable in environments with complex authentication patterns or legacy configurations.
The other options are incorrect:
* Exitsare not a detection control mechanism.
* Remediationsrefer to corrective actions, not suppression logic.
* Recommendationsprovide guidance but do not change detection behavior.
By usingexceptions, Falcon ensures that false positives are handled in a controlled and auditable way, aligning with best practices outlined in the CCIS material. Therefore,Option Cis the correct answer.

NEW QUESTION # 43
Which of the following statements isNOTtrue as it relates to Identity Events, Detections, and Incidents?

- A. Events related to an incident that occur after the incident is marked In Progress will create a new incident
- B. A detection can become an element of an incident that preceded it in time
- C. Not all events are security events that become elements of detections
- D. An event can become an element of a detection that preceded it in time

Answer: A

Explanation:

Falcon Identity Protection follows acorrelation and enrichment modelwhere events, detections, and incidents are dynamically linked over time. According to the CCIS curriculum,events that occur after an incident is marked In Progress do not automatically create a new incident. Instead, related events and detections are typicallyadded to the existing incident, provided they fall within the incident's correlation and suppression window.

This behavior allows Falcon to present asingle evolving incident, showing the full progression of an identity attack rather than fragmenting activity into multiple incidents. Therefore, statementA is not true.

The other statements are correct:

* Detections can be retroactively associated with incidents that occurred earlier if correlation logic determines relevance.
* Events can be linked to detections even if the detection is created after the event occurred.
* Not all events are security-relevant; many remain informational and never become detections.

This adaptive correlation model is a core concept in CCIS training and supports efficient investigation and incident lifecycle management. Hence,Option Ais the correct answer.

NEW QUESTION # 44

What trigger will cause a Falcon Fusion Workflow to activate from Falcon Identity Protection?

- A. New incident
- B. New endpoint detection
- C. Spotlight user action > Host
- D. Alert > Identity detection

Answer: D

Explanation:

Falcon Fusion workflows integrate directly with Falcon Identity Protection throughidentity-based triggers, allowing automated responses to identity threats. The correct trigger that activates a Falcon Fusion workflow from Identity Protection isAlert > Identity detection.

Identity detections are generated when Falcon observes suspicious or malicious identity behavior, such as credential abuse, abnormal authentication patterns, lateral movement attempts, or policy violations related to identity risk. These detections are distinct from endpoint-only detections or incidents and are specifically designed to representidentity-based attack activity.

WhileNew incidentandNew endpoint detectionare valid Falcon Fusion triggers in other Falcon modules, they are not the primary triggers for identity-focused automation. Similarly,Spotlight user action > Host relates to vulnerability management workflows rather than identity analytics.

The CCIS curriculum emphasizes that Falcon Fusion enablesautomated identity response, such as notifying security teams, disabling accounts, enforcing MFA, or triggering SOAR actions, based onidentity detections.

Therefore, workflows tied toAlert > Identity detectionallow organizations to respond quickly and consistently to identity threats, makingOption Cthe correct answer.

NEW QUESTION # 45

Which of the following are minimum requirements for showing the Falcon Identity Verification Dialog on the end user's machine?

- A. Internet Explorer 9 and Windows Server 2008
- B. .NET 3.5 and PowerShell 5.1
- C. Windows Vista and .NET 3.5
- D. Windows Server 2008 and PowerShell 5.1

Answer: A

Explanation:

The Falcon Identity Verification Dialog is used to prompt users for identity verification during conditional access enforcement. According to the CCIS curriculum,Internet Explorer 9 and Windows Server 2008 represent theminimum supported requirementsfor rendering the Identity Verification Dialog on an end user's system.

This requirement exists because the dialog relies on supported browser and OS components to present authentication challenges reliably during enforcement workflows. Systems that do not meet these minimum requirements may fail to display the dialog correctly, impacting the enforcement of MFA or identity verification actions.

The other options reference runtime frameworks or PowerShell versions that are not directly responsible for rendering the verification dialog. Therefore,Option Ais the correct and verified answer.

NEW QUESTION # 46
Which of the following IDaaS connectors will allow Identity to ingest cloud activity along with applying SSO Policy?

- A. Azure NPS
- B. ADFS
- C. Okta SSO
- D. SAML

Answer: C

Explanation:
Falcon Identity Protection integrates withIdentity-as-a-Service (IDaaS)providers to ingest cloud authentication activity and enforce identity-based policies. According to the CCIS curriculum,Okta SSOis a supported IDaaS connector that enables Falcon to ingestcloud authentication eventswhile also applying Single Sign-On (SSO) policies.
Okta SSO provides rich identity telemetry, including login attempts, device context, and authentication outcomes. This data allows Falcon Identity Protection to correlate on-premises and cloud-based identity activity, extending identity risk analysis beyond Active Directory.
The other options are incorrect:
* ADFSis an on-premises federation service, not a cloud IDaaS.
* Azure NPSis used for RADIUS-based MFA, not SSO ingestion.
* SAMLis a protocol, not an IDaaS connector.
Because Okta SSO provides both cloud activity ingestion and SSO enforcement,Option Bis the correct and verified answer.

NEW QUESTION # 47

......

Beyond knowing the answer, and actually understanding the IDP test questions puts you one step ahead of the test. Completely understanding a concept and reasoning behind how something works, makes your task second nature. Your IDP quiz will melt in your hands if you know the logic behind the concepts. Any legitimate IDP prep materials should enforce this style of learning - but you will be hard pressed to find more than a IDP practice test anywhere other than Lead2Passed.
